Don,
Many thanks for your great and very interesting info on the history or 'Radio' magazine. You filled in a lot of gaps and clarified a lot of historical items that I had heard about but wasn't sure about. Your info is so well written you should consider sending it to ER or the AWA Journal for an article.

All the best in 2010!
73, Bill K4JYS
AWA-ARRL

PS: Heard you a day or so ago on 75...booming in as usual.

Bruce, W1UJR,

I don't know these older parts that well but I grep'd 2a23cfl.txt from http://www.oldradioparts.com (Playthings of the Past) and got some hits for "interstage" transformers made by Karas. I've attached a text file of the hits. I'm guessing you've already done this but just in case ...

Best Wishes,
Coop, AA1WW

GM Bruce,

I don't recall ever seeing the exact item in my pile, but I do recall seeing some that resembled your pics physically. Just spent 1/2 hr out in the cold-cold seeking, but no luck so far. I probably wrapped them up carefully and put them in a box...so no one would ever see them again, I guess.

If you don't get any results, get back to me, and I will work harder.

Gad! Is that the 'going rate' for these things now? When I was a kid, these things were stacked floor to ceiling in the local surplus store and the owner couldn't even give these away as they had a terrible 'on-air' reputation...didn't they use a self-excited oscillator system?

9858. DOJ calls for FCC to release spectrum, focus on wireless broadband

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-01-05 14:10:00 UTC
From: Joseph W. Koester
Topic: 9858 Message: 9858

I hope they don't get into our existing spectrum. I wonder if the 70cm band is in danger? Certainly those in higher frequency bands may be at risk. Use 'em or lose 'em I guess.

Joe

DOJ calls for FCC to release spectrum, focus on wireless broadband
The Department of Justice said wireless broadband services may be an attractive option for users without high-speed Internet access and could provide more competition to cable, fiber and DSL services. But such options can't be possible unless federal regulators release more spectrum for mobile broadband services.

The comments (pdf) by the antitrust division of Justice were filed Monday to the Federal Communications Commission, supporting a growing agreement among regulators that the infrastructure of wireless networks at hand today won't support the explosive growth of wireless smartphone use in the near future.

"Given the potential of wireless services to reach underserved areas and to provide an alternative to wireline broadband providers in other areas, the (FCC) Commission's primary tool for promoting broadband competition should be freeing up spectrum," Justice said in its comments.

Specifically, Justice said the FCC should shift "underutilized" spectrum to the hands of wireless carriers. And the agency warned that when giving spectrum, the FCC should take in to consideration how the largest telecom companies could further concentrate their market power through an auction.

The agency also noted that competition among providers of fixed wire and wireless broadband services may be determined by some of the largest telecom providers such as AT&T and Verizon Communications, which operate both services.

"If wireline providers charge more for service packages that involve greater speeds and/or higher usage limits, consumers purchasing these packages may not enjoy the benefits of competition from wireless broadband, or may do so only indirectly to the extent that consumers as a whole display a willingness to substitute slower wireless service for faster wireline service," the agency said in its filing.

The comments were submitted as part of the FCC's push to bring affordable and attractive broadband services to all U.S. homes.

In their latest meeting on the development of a national broadband plan, consumer groups criticized the FCC for plans that they feared wouldn't bring in new competitors to the giant telecom and cable firms that serve most of the nation today.

(Hi Steve!)

They were a MOPA, with the MO being some sort of LC oscillator, IIRC.

Have not visited the auction; wonder if the 211 tubes were included?

It's comforting to know that we have the technical experts at the Department of Justice working on this issue. I guess they have all the problem in their department worked out now (you know, like prosecuting terrorists, and other mundane tasks) so they can now take on the sticky technical issues of the day.

9872. Help woth a n Emerson ID

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-01-07 23:41:49 UTC
From: Captains_Z
Topic: 9872 Message: 9872

I have an Emerson plastic radio, possible Catlin, that I am trying to identify. It is almost a carbon copy of the Emerson 375 that is shown in Stein's "Plastic Radios" and in Stein's "Guide to Tabletop Radios, vol2". The difference is that mine has a handle and 5 tubes (standard AA5), while the 375 doesn't show a handle and has 6 tubes. The handle matches the coloration of the cabinet.

The cabinet is dark green with yellow swirls and the 5 vertical bars to the left of the dial is a butterscotch color, as is the one bar to the right of the dial.

Could this be a later (or earlier) version of the model 375? Any other thoughts?

Thank you.

John

W1UJR de W4MIL.....

I agree totally with your comments. Steve does nice work. Incidentally, the '29 style TNT shown is pretty close to one I built back in the mid-90's. I'm collecting parts now to build another one.

The new website is excellent. And properly named, BTW.

Steve,
That is indeed some absolutely beautiful work! I really like your attention to detail you put into creating some of the individual components for that authentic look. I definitely learned a few things for building some of my upcoming projects!

Simply A1 on the webpage and transmitter Steve. Was so happy to work you in the 29 QSO Party and receiving your QSL w/picture of the transmitter. BTW, you should be receiving my QSL card shortly.

One question, it appears in the last picture that you plated the coil. Is that true or just a digital photo illusion? If you did plate it please tell us what type and method of plating as it looks really neat in Silver.

Hi Steve,

James hit the nail on the head...an exceptional job of craftsmanship. Contrats. I got your QSL and its one that I will definitely hang on the wall...and tnx for the beautiful pix as well. My first AWA rig was the TNT from Dec '29 QST. It works well, but not nearly as nice a job as yours...you have given me inspiration to 're-hab' my TNT. Also you web page is excellent. Many interesting items to look at. Tnx for the great page on your building the TNT. And, many tnx for our AWA QSOs and your good ears. I look forward to your new page with pix of other ole time rigs and also the scans of 'RADIO' magazines. I esp. hope you will be able to get that project going.

Thanks for putting so much interesting info where we can enjoy it.

Hello Don and thank you...your comments are much appreciated. It was wonderful working you as well in the QSO Party and I'm looking forward to your 'OO' card! I did not plate the coil...just steel-wooled and sprayed...I guess the camera angle / flash made it look brighter than it really is.

Hi Steve,

Great job on the website. Attached are pics of my 1929 TNT XMTR that I used in the recent Bruce Kelley 29 QSO party. Yet another design using a type 10 tube and constructed in the Aero transmitter style. Feel free to add them into the photo gallery.

Fortunately for me, I do have an original "Single Control Transmitter" from that Dec '29 QST, built by a local ham in January 1930. It's exactly as you see it in QST. I have used it in a couple AWA '29 QSO parties, and it is touchy and needs good clean DC. I have not had to replace any components. (Very few in it, anyway!) It's also pictured on Lou's (VE3AWA) website.

As for the critique about wanting to see only "original" rigs on the web site, I doubt many of us could come up with originals, as most were probably cannibalized for newer projects back in the thirties. I was just lucky to pick mine up in an estate auction here, described by the auctioneer as "an old home-built radio," for $5!

New, or old, keep those "glow-bottles" operating. And, the more pix we see of each participant's efforts, the better.

Hi Perry,

You were the guy operating close to me, on 40m, I think, during the '29 party. I just tuned by your freq. when I thought you said you were running an orig. TNT. You said you were going QRT because you didn't want to use your rig too much due to the sig. quality...well, I don't recall anything very bad and you sounded as good or better than a lot of the '29 signals...which, to me, all sound good. I called, but you had gone QRT. Nice to know the rest of the very interesting story....wow, 5 bux. Hope you will return it to the air next year so we can log in a true original.

Steve,

Excellent page, your TNT is just gorgeous! Very nice how you detailed all the steps to build the rig. I am very impressed at your creativity in replicating the center tap resistor and grid leak. Outstanding all around.
BTW thanks for plugging my youtube video on the page :)

Well gee, you're right, BUT a reproduction should be marked REPRODUCTION.

Ask the guys that collect tubes who have to worry if the spherical Audion they're looking at is real or a reproduction.

But I'm sorry, since you're not a collector you might not understand
my reference...
Spherical Audions were the first 3 element vacuum tubes made by
Lee DeForest. There were a number of reproductions (fakes) made
back it the 70s.

Now I need to go see about all my dusty old 1929 transmitters....

Guys who collect tubes do not have to worry about fake audions as they are easy to spot. It is the guys who think they collect tubes are the ones that need to worry about the possibility. Spherical Audion copies and reproductions have been made since the teens, not just in the 70's. Besides, that is hardly the same as talking about recently made reproductions/copies of vintage gear. They are made solely for the joy and satisfaction of the maker and are obviously appreciated by the like minded who have the same thing in mind and, actually even use them on the air. – Mike

Great website and NOTHING wrong with the title of post. Do we now need a lawyer to proof read a post before sending it to the wedsite. The follow apply:

1) did not say the transmitter was original
2) the radio is not for sale so Steve had nothing to gain by pretending it was real in the title (AND HE DID NOT Pretend it was)
3) this transmitter does have something to do with this group and history of radio
4) this is a group to gain knowledge of the past and have fun.
5) you said when you read the title you thought it was an original. If you saw an ad that described a radio and it sounded like a great original find and it ended up being nothing, did you write the group and tell us what you though you would find?
6) just use bandwidth up to tell us what you though?

BTW when I saw your title of "RADIO HEAVEN" I thought I would see gold streets and angles, but I did not. You did not say it was a real heave, but I did not post to the forum that I though it was real.

Back to the great hobby of radio.

Mike

That is beautiful craftsmanship. While this is not the sort of thing that normally rings my chime it certainly does impress me and I appreciate the effort. It is truly a labor of love! I always liked the copper coils, whether on a breadboard or an antenna on a mobile. Copper is impressive. Thanks for sharing.

Subject: [AWA] New '1929 Transmitter' Web Page

For those that may be interested in such things, I have pretty much completed work on a new addition to my web site. The page describes my '29 TNT construction for the recent AWA '29 QSO Party:

http://members.shaw.ca/ve7sl/tnt.html

I will still be adding a 'Photo Gallery of '29 Style Transmitters' to the page so if you have a picture of your pride & joy that you would like to share, please pass it to me for inclusion.

Steve / 73

Those are nice looking transmitters on the VE7SL web page. My tptg is not nice enough to display. It uses a toy train transformer for filament voltage, and phanstock clips on the grid resistor. That way, I can experiment with a shoe box full of old buzzard tubes. I started with the 29 Grammar TNT as pictured on the VE7SL web page. I changed it to a TPTG, so I could tune up different types of old triodes which have different internal capacitance. My tptg is shunt fed, therefore the low end of the big coil is at ground potential. There is no need for a swinging link antenna coupling coil. Simply take a Heathkit Cantenna and tap off up from the grounded end; finding the point where the plate current dips at half the level of where it dips with no load. That should be the 50 ohms impedance point. Remove the cantenna and attach a 50 ohms outside antenna. For me, the sweet spot is one turn up from ground on 80 meters and 1/2 turn on 40 meters.

From: Bruce W1UJR
Topic: 9899 Message: 9899

Anyone have an RME-69 receiver?
I'd like to get your take on the alignment process for the set.
The RME manual procedure is confusing to me.

Would also like to chat with you about your experiences
and feedback on the set. Mine seems to play ok, but
the audio is distinctly "bassy" with the speaker
and with the headset. Have checked and replaced
a number of caps, would like to hear what you have found .

Thanks!

Cordially,
Bruce J. Howes W1UJR

I have been given a couple of SX201A tubes. Can anyone tell me what vintage they are and whether they would be any good for a 10w PA on 80 and 40 metres? Would also like data to enable me to test them.

They are probably from the mid 20's. You can test them as an common 201A tube. They will work in a transmitter, but, you will not be able to get that much power out of them, unless you maybe ran the plates red hot, and then of course they would not last too long. They were used in almost every TRF or regen receiver in the 20's and are triodes with a 5 volt filament. 73 - Mike

Pat,

These have 4 pins, right?

10-watt power amp on 80 and 40? I don't think so.

201As are low-gain tubes used primarily in multi-stage (cascade) TRF receivers from the mid-1920s. Put about 60 of these together and you might get 10 watts on MF. Sylvania used the SX prefix. A tube-tester with a 4-pin socket should have info for testing the 01A, as it is commonly known. If they have the S-bulb and test good, they are worth about $8 each.

Best,

Bill, K4JYS has used the 01A in a 1929 style 80M oscillator type xmtr., and was able to extract several watts of RF out, IIRC. The same tube used as an amplifier, should yield a bit more output.

Hi Ron and all,

That's right. I use a CX-301A in the Dec 1929 QST TNT osc. I run about 210 volts B+ at about 20ma...about 4 W input. I've been using the same tube for several years with no problems. My first attempts (primarily in the '29 QSO party), I ran at about 175 volts B+...at about 2 W input...and made quite a few contacts. I have seen several notes or strays in late '20s QSTs about using the '01A at these B+ levels. Thought I'd try it and so far so good.

From: hauptfam
Topic: 9905 Message: 9905

I was intrigued by what I heard on the air during Bruce Kelley QSO Party and quickly put together 1929 style Hartley; however only made one measly contact. Used UX-210 of questionable condition which operated at 2W input an <200mw output. I've made "lessons learned list" that's pretty long and am sure looking forward to next Bruce Kelley QSO Party.

A friend W2LB Larry is a very resourceful guy and he also quickly put together a 1929 Hartley however Larry made numerous QSO Party contacts and also had a great time. Pictures of Larry's 1929 Hartley Transmitter on his W2LB QRZ listing.

George,

I'm sure your "lessons learned list" will help next year and you'll be able to squeeze more watts out of your Hartley. I love Larry's Hartley! I'm always envious of the QST quality designs that other on this list have built and I naturally strive to build to such exacting standards, but usually fall far short. However, when I saw Larry's the first thing that came to mind is "now that's the way a high school kids Hartley would have looked in 1929!" I can picture the kid scrounging parts and pieces from anything they could find in the alleys behind the radio shops.

BTW, I did talk to Larry on 80 meters during the event and he was a RST 459 into Wisconsin. A good tone!

Thanks for posting about your efforts and good luck next year. I'm sure once you can get 2 watts or so output you'll be making all kinds of contacts.

Lou,
Good point I hadn't heard talk of Cundall Contest on our local 2M AWA Net. I'm still procrastinating AWA Membership because I'm already in a couple of Amateur Radio Clubs so I don't get any of the AWA publications. I did just check AWA website and found listing of the Upcoming On-Air events.
For Cundall Contest I'll have to check if my Stancor 10P was constructed before 1946? The 1929 Hartley I built has been moved so I have some operating room in the shack once again. I also need to replace the bamboo chopstick I used on fine tune variable cap to keep my hand away from Tank ckt. I'm going to turn down ends of fiberglass electric fence support rod and install it with a vernier dial.

Don,
Thanks for the encouragement I realized my signal wasn't very strong but was more concerned about it's harmonic emission. I didn't have any output filtering and was just link coupling into 9:1 balun to match my 50ohm antenna.
FB on Bruce Kelley QSO Party QSO with Larry W2LB. he's a resourceful guy and if you notice in the he keyed this rig contacting a test lead against a screwdriver. I wonder if that qualifies for "Straight Key Operation"? Hi! Larry was using a #27 Tube and even had QSO with a station in UK.

Tks for your reply George.

Whether your10P qualifies as Ol' Time or not, hope to work you one of those nights.

Not ever seeing a 10P and, of course, your Hartley, how about sending me photos of both? Want to see that chopstick tuning!

"Larry W2LB..... Hartley ....using a #27 Tube .... even had QSO with a station in UK."

Oh THAT W2LB.

During the Kelley Party after a QSO with Larry I called my last CQ AWA about 2:30 AM . Before calling it a morning I tuned dwn to the btm end and hrd this strong G calling CQ DX. Zeroed in on him with my TPTG. The G stood by with no one calling him back. Was ready to call, but a rotten but familiar sig beat me to it. It was Larry.... Larry and his #^%$#@!! screwdriver!

73, Lou VE3AWA

Hi George,
 After I retired, I had to make some adjustments, due to a very thin budget. Thus, I was unable to renew memberships, that I had previously held, and had to cancel most of the publications, that I had previously subscribed to.
 Cancellation of my AWA membership, however, would be a last resort situation! IMHO, the AWA Journal, by itself, is worth the price of membership, and is a very interesting publication. The latest 2 issues have included a very interesting 2 part article by WU2D, describing his 1929 style TPTG xmtr. My only regret is that the publication only comes 4 times/year.
  Of course, your interests may not align with mine, so YMMV!

> After I retired, I had to make some adjustments, due to a very thin budget. Thus, I was unable to renew memberships, that I had previously held, and had to cancel most of the publications, that I had previously subscribed to.
> Cancellation of my AWA membership, however, would be a last resort situation! IMHO, the AWA Journal, by itself, is worth the price of membership, and is a very interesting publication. The latest 2 issues have included a very interesting 2 part article by WU2D, describing his 1929 style TPTG xmtr. My only regret is that the publication only comes 4 times/year.
> Of course, your interests may not align with mine, so YMMV!
> 73 de Ron n4gjv
>
> I'm still procrastinating AWA Membership because I'm already in a couple of Amateur Radio Clubs so I don't get any of the AWA publications. I did just check AWA website and found listing of the Upcoming On-Air events.
> For Cundall Contest I'll have to check if my Stancor 10P was constructed before 1946? The 1929 Hartley I built has been moved so I have some operating room in the shack once again. I also need to replace the bamboo chopstick I used on fine tune variable cap to keep my hand away from Tank ckt. I'm going to turn down ends of fiberglass electric fence support rod and install it with a vernier dial.

9915. AEROVOX Filter Condensers

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-01-15 20:09:19 UTC
From: DeWitt Clay
Topic: 9915 Message: 9915

Without seeing them (usual rectangular or the less common round cans) it is safe to say they are paper/foil oil filled caps nominally rated @ 1500 DC. Any of these oil filled filter caps were built to handle a 10% overload so that means a safety factor of up to 1650 VDC. Avoid high heat locations but that is not usually a problem (leakage increases with rising temperatures). Sopme of the high quality caps were/used (linen) cloth/foil combinations and oil filled.
73, DeWitt N4QNX

I think this is a prime example of a scam. He picked up my ad from somewhere, possibly Radio Age or the Texas Antique Radio Club (TARC) Newsletter. Note he included address, phone number and everything in the title. They all do that - a giveaway of sorts.

There were at least four different people in England that just happened to have a power supply/amplifier for a Philco 38-690. Amazing that so many of these high end radios made it to England just before the war broke out and were not destroyed, unless just the amplifiers survived.

I am just sharing this in case someone else advertises and gets a response like this. Amazing if you ultra-rare items seem to show up in warehouses in England.

Caveat Emptor. If it seems too good to be true it probably is!

73s,

Joe

PS: I found the amp here in the states!

I think that was a different seller. I've had some correspondence with
the seller of item 170403438886 (I swapped him a section of TAT-1 cable
for a tube a couple of years ago) and as he notes in the ad he has quite
a number of the tubes. He was offering them at about $800 back then but
has now put his price up (although with the Make Offer option).

The only one I've definitely seen sell went for $358.00 in May last year
from yet another seller.

The Bell Labs article on the tube may be read at archive.org; it gives the cathode current density as "approximately 0.7 milliampere per square centimeter".

It's a long time since my electronic engineering studies (so long that they'd only just introduced transistors into the curriculum), and I don't remember seeing the term either.

But from the units, it's a way to normalize the cathode current for comparison purposes among different sized cathodes, by giving the cathode current per square centimetre rather than just the absolute current draw.

In this case, presumably the very low CCD contributes to the very long life expectancy of the tube.

This section of the Wiki article on current density confirms that, I believe:

http://en.wikipedia.org/wiki/Current_density#Importance

"High current densities have undesirable consequences. Most electrical conductors have a finite, positive resistance, making them dissipate power in the form of heat. The current density must be kept sufficiently low to prevent the conductor from melting or burning up, or the insulating material failing."

It's a long time since my electronic engineering studies (so long that they'd only just introduced transistors into the curriculum), and I don't remember seeing the term either.

But from the units, it's a way to normalize the cathode current for comparison purposes among different sized cathodes, by giving the cathode current per square centimetre rather than just the absolute current draw.

In this case, presumably the very low CCD contributes to the very long life expectancy of the tube.

This section of the Wiki article on current density confirms that, I believe:

http://en.wikipedia .org/wiki/ Current_density# Importance

"High current densities have undesirable consequences. Most electrical conductors have a finite, positive resistance, making them dissipate power in the form of heat. The current density must be kept sufficiently low to prevent the conductor from melting or burning up, or the insulating material failing."

No, I meant a real WE215 peanut tube (though the others you mention aren't far off).

Full info at http://www.antiqueradio.com/Jan10-1-GBARC-Radio_XLI.pdf

RADIO XLI
An Indoor Old Radio Flea Market
Biggest Show on the East Coast ★ Same Giant Location Last Year: 528 Attendees ★ 55 Exhibitors ★ 87 Tables
Sunday, February 14, 2010 — 8:00 AM to 12:00 NOON
Registration begins for all at 7:30 AM $11 admission (spouse & children free) – Exhibitors see below.

Westford Regency Inn – Regency Room – Westford, Mass.
(I-495 at Exit 32 – directions below)
Refreshments will be available. Pre-registration & Information:
A.R.C., P.O. Box 2-W20, Carlisle, MA 01741 – (866) 371-0512 – arc@...

Exhibitors: $11 per person/family for admission plus $33 per table. Table sizes and location assigned on a first come-first serve basis. Early registration is recommended. Last year's exhibitors in the main hall may request the same location, if we receive their paid registration by February 1, 2010. Four table limit per exhibitor. Exhibitors must occupy tables for entire show. Tables unoccupied 15 minutes prior to the end of the show will not have priority for the same location in 2011.

Exhibitors may register at the door (if tables are available), or may pre-register by mailing payment to: Radio XLI, c/o A.R.C., P.O. Box 2-W20, Carlisle, MA 01741. (Make check/MO to A.R.C.; Visa, MasterCard, Discover, American Express OK, too.) If paying by credit card, exhibitors may pre-register by calling (866) 371-0512 or faxing (978) 371-7129.

Note: Show opens to all at 8:00 AM. At 7:30 AM, exhibitors may enter the hall only to deliver goods to their tables (no setup/no unpacking/no buying/no selling) and then must return to the foyer until the doors open for everyone at 8 AM. If desired, one person may sit at the table for security purposes (no setup/no unpacking/no buying/no selling). Speak with show manager for special situations. Cancellation Policy: Table fee will be refunded only if requested and the table is resold. If a table is not occupied by 9 AM, a table may be cancelled and resold.

Overnight stay: Westford Regency Inn at 1-800-543-7801. Mention Radio XLI for special rates. Room reservations should be made by January 22, 2010 for special rates. Bring your family to enjoy indoor pool, health club, racquetball courts, three restaurants, bar, etc. Night skiing at Nashoba Valley Ski Area, only 2 miles away!

Directions: From I-495, take Exit 32. Follow "To Rt. 225" sign. At traffic light by gas stations, turn right onto Rt. 110-West for 0.4 miles. The Westford Regency is on the right. Use doors on right (north) side of Inn. Ramps at both show entrances! The Westford Regency Inn and Conference Center is a 193- room hotel with two restaurants and over 500 parking spaces. With over 20,000 square feet of conference space, we have room to expand our future radio meets!

Sponsored by:
The Greater Boston Antique Radio Collectors

Not a club, no dues, no newsletter... just a great group of collectors! Thanks to Antique Radio Classified for organizing this meet.

Cordially,
Bruce J. Howes

9943. Nice AP Story on Ham Radio

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-01-20 02:56:18 UTC
From: John Ruccolo
Topic: 9943 Message: 9943

It's unusual to see a newswire story on ham radio. Here's a nice example:

^Hospital has a ham radio station
^By DAVID A. FARRELL=
^The Picayune Item=
   PICAYUNE, Miss. (AP) _ Mention the term ``Ham radio operator'' to most people, and they will envision an old codger, puffing on a pipe or cigar, sitting in his shed by the house with a set of headphones on, talking to someone on the other side of the world, with a massive antenna shooting up right beside his hobby shack.
   But did you know that Highland Community Hospital has a ham radio station. So does the Pearl River County Hospital in Poplarville. So does the Emergency Operations Centers in Poplarville and Picayune. So does the Pearl River County Baptist Association Shelter out from McNeill, and the fire stations.
   Why?
   It's because, says Larry Wagoner, when all other communication systems go down in an emergency such as a hurricane, ham radio operators are the last ones who are still ``talking to one another.''
   As a matter of fact, the local Pearl River County Amateur Radio Club, helped install the stations here.
   Wagoner, a ham radio enthusiast and club public relations officer, says he first got interested in amateur radio as a young lad of seven because a few member of his family urged him to start looking into it.
   Later he read more about it and then ``took the plunge.'' He now is the vice president of the county club, and the club just recently held what is called a ``Ham Fest'' at the old National Guard Armory at Poplarville.
   The club has about 34 members, with some members from Washington and St. Tammany parishes in Louisiana and also from nearby Stone County.
   At the fests, amateur radio operators get together and talk about each others' ``rigs'' and vendors also show up hawking the latest ham radio gadgets and communication gear.
   While the county club here just held their fest, and it won't be until next December when the locals get together again, there are other club fests planned nearby in Hammond in January and Slidell in July.
   Used to be, it wasn't easy to become a ham radio operator. The main obstacle was having to learn Morse Code (CW or continuous wave for short), which was a stumbling block for many. Wagoner said that in 2007 the Federal Communication Commission phased out that requirement, and the licensed amateur operators shot up in numbers.

``I was one of the last of the coded generals. Right after I qualified with the code, they did away with it,'' said Wagoner.

Wagoner, who lives in the Henleyfield Community and on his day job works for a private hospice company, says that as a ham radio operator, he has talked to other enthusiasts in about 100 countries and to residents in all 50 states.

There are an estimated 6 million ham radio enthusiasts in the world.

``Some of our guys have talked to persons in over 300 countries, so what I have accomplished is not that big a deal,'' he said.

Wagoner said that most people think that it is very expensive to become a ham radio operator. ``They envision a big, expensive radio tower outside their home, a big, powerful, high-priced radio, but you can really get into it without a lot of expenses,'' he said.

Wagoner said the local county-based club offers classes for those interested in getting their license and also shows members how to string an inexpensive antenna that will allow them to communicate with the world just ``with a string of wire and some insulators.''

``In fact, most guys prefer the inexpensive homemade antennas and radios, as opposed to the manufactured varieties, although you can get some deals there, too,'' he said.

Wagoner says there are three levels of licenses one can qualify under: tech, general and amateur extra.

The basic tech license allows one to operate on most bands, among them the most popular 2-meter band. The general license allows an operator to get into bands that are used worldwide and the amateur extra class license expands band usage even more, he says.

He said the local club offers a three-Saturday course to get started and to earn a license.

Wagoner said that most people don't realize that the amateur bands occupy more space in the frequencies regulated by the FCC than just about any other. Only the military occupies more space.

Wagoner said some enthusiasts get into antique radioing, like operating the old tube-type radios, called ``boat anchors.'' Says Wagoner, ``Those guys say it ain't real radio if it don't glow.''

Radios first operated using vacuum tubes that warmed up hot enough for the wires inside the glass bulb to glow. Transistors later replaced the old tubes.

Ham radio can be traced back to the early 1900s when radio first began. Amateurs have always blazed a trail in new uses of the medium, and they do it as a hobby and not for money.

Ham radio really took off here after Katrina when not only government officials, but the general public, found out how valuable amateurs were after all types of communications failed and went down.

``They were called the 'unsung heroes' during and after the storm,'' said Wagoner.

Said Joe Spraggins, Harrison County's EOC director, ``If it

hadn't been for the amateur radio operators, we would not have had communications with other agencies. . .ham radio saved the day.''

Pearl River County Emergency Management Director Danny Manley said that the local amateur operators are definitely necessary to round out the readiness of the emergency system here that would go into operation in case of a disaster.

``In case of a disaster that knocks everything out, they have a network to communicate between the cities, the county and the state. In addition, most of them are weather spotters, which is another necessary capacity we need here during emergency situations,'' said Manley.

He said that the emergency management headquarters and offices in Picayune and Poplarville are equipped with ham stations. ``They set it up for us, all by themselves. They are a great asset for the county,'' said Manley.

9944. QRP DSB suppressed carrier using type 47 tubes in balanced modulator?

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-01-20 13:57:59 UTC
From: geo
Topic: 9944 Message: 9944

Does anyone know if the type 47 tube would be a good choice as an RF output for a QRP DSB rig for 40 and/or 20m? How well is the control grid screened by the screen grid?

I'd like to prototype a simple transmitter using a pair of 47s as a balanced modulator/power output, being driven by an oscillator triode and a push-pull audio source.

Would a 47 be a good choice?

PS: The reason why I'm looking at DSB suppressed carrier is because trying to run QRP AM is like talking to a brick - totally useless.

My line of reasoning is simply that if SSB has an advantage over AM (in how effective it is), maybe I can find some advantage in QRP operation with DSB, without the burden of the complex filter requirements in SSB.

Geo -

I have worked almost all over the country on 160 meter and 75 meter AM using either my WS-19 set at about 2 to 3 watts or, my BC-474 running about the same power. I also have an older Sailor solid state transmitter/receiver and on 75 meter AM worked most of the east coast with less than a watt on AM. So, it can be done, and, it is fun. Of course it is a lot easier with my T-368F, HI. 73 - Mike

You must have an awesome antenna?! When I try QSO on 1W AM, I might as well be talking to the wind.

My antenna is an inverted Vee, 30 feet up at it's peak, cut for 40m. But using a Kenwood TS520SE on 20m I've talked as far as Nebraska and the Virgin Islands.

Topic: 9944 Message: 9950

I will be on today / tonight starting on 40m before it shuts down for the night and then over to 80. From what I have heard over the past few nights, both bands are suffering from 'long-skip' syndrome...fine if you are hunting DXCC but not so great for our domestic contest work. I think we were all very lucky to have such fine domestic conditions during the '29 QSO Party and I'm not holding my breath for tonight but maybe the magic of radio will astound us once again.

I will be xtal-controlled on 7040 (primary) with a back-up on 7050 if driven from the primary by local QRM. Please look for me there starting at 2300Z (1800 EST) for a couple of hours....remember that it is still daylight here for the first 90 minutes of the contest and don't scoot off to 80 too early :-(

On 80 I will be dug-in on 3560 only and will make a point of tuning up and down from my calling frequency for any other rockbound AWA'rs.

Tonight it will be my Paraset (6SK7 x 2 regen rx) with it's normal 6V6 swapped out for a 6L6 at 8W output....first one built in 1941.

Good luck to all!

be interesting how this works for you,, in the 60s I built a 6 meter
DBM out of a pr of 2e26s PP input and parallel output with a simple
6l6 to modulate the screens

worked well,, several yeas ago I wanted to re introduce it to the local 6
meter public
har
th usual report I got was " Ur on the wrong sideband" so I figured the
appliance ops
werent going to be able to deal with this esoteric modulation screen'

it did have good carrier suppression and I still have it. Went into the
AF and when I got out
everything went solid state. I never took it apart for parts

Subject: [AWA] Linc Cundall / VE7SL

I will be on today / tonight starting on 40m before it shuts down for the night and then over to 80. From what I have heard over the past few nights, both bands are suffering from 'long-skip' syndrome...fine if you are hunting DXCC but not so great for our domestic contest work. I think we were all very lucky to have such fine domestic conditions during the '29 QSO Party and I'm not holding my breath for tonight but maybe the magic of radio will astound us once again.

I will be xtal-controlled on 7040 (primary) with a back-up on 7050 if driven from the primary by local QRM. Please look for me there starting at 2300Z (1800 EST) for a couple of hours....remember that it is still daylight here for the first 90 minutes of the contest and don't scoot off to 80 too early :-(

On 80 I will be dug-in on 3560 only and will make a point of tuning up and down from my calling frequency for any other rockbound AWA'rs.

Tonight it will be my Paraset (6SK7 x 2 regen rx) with it's normal 6V6 swapped out for a 6L6 at 8W output....first one built in 1941.

Good luck to all!

Steve / 73

George,

Sorry your having a frustrating time with QRP AM. I've worked my share of it, and while sometimes it can be frustrating for the person on the other end, I can usually be heard, and often am Q-5, with 5-10W output. I've had the best luck on 160M and 80M, (and of course 10M when it's open.) You need to have a reasonably good antenna*, and chose the band/operating times accordingly - e.g., night-time QRP operation on 75M usually doesn't cut the mustard, but morning/daytime/afternoon often does.

You mentioned you had a 40M antenna - 40M propagation hasn't been very great recently, in my experience.

One year I won the AWA "'30's Night" AM contest with an 807 grid-modulated, which gave me about a 7W carrier. I only won because the low power gave me a points advantage.

*but nothing too special - I have a 160M dipole up at ~60', and a 80M dipole at ~40'. Both are fed with open-wire line and tuners so I can use them on multiple bands.

73,
-Larry/NE1S

Hi George,

I see no reason why it wouldn't work.

Or build a pair of the balanced modulators using a pair of 47s each, and
phase them, for SSB! (The W2UNJ exciter, IIRC, did this with four 6K6s).

From: geo
Topic: 9944 Message: 9959

Can you show me a link to a schematic for this?

Do you think the screen grid of the 47 would provide well enough isolation between plate and control grid so I could connect an oscillator to a pair and not see too much frequency pulling against the oscillator? Or should I play it safe and include a buffer?

Ideally, I really want to use some vintage late 1920s Cossor tubes for this.

The QRP AM rig I made, photos are in this group under my call sign VE3GZB, near the very last photos:

http://groups.yahoo.com/group/antiquewirelessassociation/photos/album/516554/pic/2136394345/view?picmode=large&mode=tn&order=ordinal&start=81&dir=asc

Shown are all Cossor tubes: 210HL for audio, 220PT for Heising modulator and 215P (or 220P) for oscillator. When I push it hard (200V on the plate) I can generate just about 1W output on 40m.

While learning CW from another ham, I learned that CW operators can get fantastic range on such low power, some even in the milliwatt levels! I reasoned out that it's the contrast ratio of the modulated signal which is responsible.

I reasoned that it's also why my 1W AM rig got me nowhere and why I'm wondering about the DSB suppressed carrier approach instead. No sense putting power into a carrier when it's not carrying information.

If you can point me to a schematic, I'd appreciate it. I have some ideas in my head already about how to approach this, but instead of reinventing the wheel, I can look at ideas used in the past.

Hi Mike,

What kind of antenna(s) were you using to achieve those very impressive results?

I can tell you from personal experience that a Hustler vertical and a DX-60 don't get you very far on AM. ;-)

Geo -

I have worked almost all over the country on 160 meter and 75 meter AM using either my WS-19 set at about 2 to 3 watts or, my BC-474 running about the same power. I also have an older Sailor solid state transmitter/ receiver and on 75 meter AM worked most of the east coast with less than a watt on AM. So, it can be done, and, it is fun. Of course it is a lot easier with my T-368F, HI. 73 - Mike

John –

While you were here at the QTH no doubt you saw the 70 foot tower. Its main purpose is to support an inverted V which is 290 feet long made out of solid #6 copper, 145 on a side. It is fed by home made ladder line with 6 inch spacing and I use it on all bands with a HB tuner. That antenna works out real well for me. While in Virginia, I had a 60 foot tower and an 80 meter inverted V on top. That was great for 80 and above and some 160, but, I put up a piece of wire the height of the tower, and then out about 100 feet or so and used it on 160 with great results. Typically, the band conditions do have to be prett5y quiet for any distance running such low power. Although, for a year while I lived in an apartment up here, I use a Multi Elmac AF-67, mostly on 75 and 160 AM to a piece of wire out my patio door to some trees behind the apartment, and, that worked out real well also. 73 – Mike

Mike,

Thanks for sharing your experiences with the WS-19 & BC-474... That's encouraging!
I have two CE-20A's, and wondered if I could work anybody with them barefoot.

FB on your antenna and feed system! I use HB 4" spacing ladder line. Some of it actually dates from my 1-Land operating days, and more from 4-Land.

The oldest is pushing 25 years, and is still going strong.

Tuners used here are Johnson Viking (2 ea. MB, 1 ea. KW MB), Nye Viking MB-II (IIRC), and the Unique Wire Tuner.

Nothing beats open wire feeders and efficient tuners!

Have tried that on occasion with my CE-20A on 160M and 80M, Tom, and could usually be heard Q5 in the Northeast.

Usually run the 3-1000Z amp, though, so that people don't have to strain their ears too much.

Hi Guys,

Jim Moffett found some goodies that might be of interest to someone. Here 'tis:

Oh Yes..... I found some AC RF line chokes, NOS in boxes, Ohmite. About 6 or seven of them. Any of your radio buddies know what these were used for? They look like they were for Electric Company(like CPS) use and not radio repairman. A few bucks buys the box.

Any interest contact Jim: email address in header.

Yes I intend to be on but I expect QRM will be greater as it is the week-end. I think 80 is more likely than 40 but will do same schedule as Wednesday.

Did I miss my chance to make 160M Linc Cundall QSos for 2010?

In the past, 160M contacts were only allowed in the Wed nite - Thursday operating period, and and not Sat nite-Sunday. I didn't see such a restriction in this year's rules, but could have missed it.

73,
-Larry/NE1S

Please remember to turn your 40 and 80m beams west this evening. I am rockbound on both bands 7050 and 3560 running my Paraset (regen rx / 6V6) at about 5 watts out...if you call...pse repeat both calls several times as it is sometimes difficult to 'net' my rx / tx freq with this setup.

9983. AWA Museum Proposal - WOW!

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-01-24 16:35:29 UTC
From: Bruce W1UJR
Topic: 9983 Message: 9983

If you haven't had a chance to read the new AWA Journal, then you are in for one huge treat!
Had my house, and life, not have been torn apart for construction for the last two months (how long does it
take to renovate a bathroom anyway?), I would have posted this far earlier.

Pages 33-35 of the current AWA Journal outline the new AWA Museum building and campus, and I have to tell you,
I am simply overwhelmed by the vision and design! I've always loved the old Academy building, it was where I was
first introduced to the AWA by Bruce Kelly W2ICE many years ago. Despite those fond memories, the plans for the
new museum make giving up the old building so much easier.

The new plans, with a tremendous amount of exhibit space, gift shop, radio station, even theater are
nothing short of amazing! The front of the building, styled to resemble Spartan 557 "Sleigh Radio", complete
with blue mirror, chrome trim and wood are iconic as the radio set itself. The promise of actual operating
radios which visitors can turn on just adds to the mix. Did I mention display space? If you've been to the AWA annex,
then you know how much of the current collection is not on formal display. In the new design,
fully half of one wall is taken up with display shelving, and another large floor area is likewise devoted to display.

I've visited a number of radio museums in my day, from Fred Hammond VE3HC's wonderful facility in
Guelph, Ontario, and was even privileged to know Fred himself. I also have visited the American Museum of
Radio and Electricity in Bellingham, WA in its early stages. I don't believe that either will begin to measure
up to what the good folks have envisioned for our organization. What has been proposed will be a crown
jewel in the Finger Lakes region of New York state, certainly a destination, rather just just a curiosity.

If you ever had any question about the direction of the AWA, then this proposal should remove all doubt.
We have a board and staff with a great vision, a vision which you as a radio enthusiast can be
rightfully proud of. Knowing what I know of the current AWA board, this is a group with the background,
experience, and means to make this happen. However great this vision, it is also a vision which needs your support.

Take a few minutes and read the article, then ask your local AWA contact what you can do to make this happen.

I'd say the AWA is again an organization on the move. With the newly energized AWA Fall Conference, now in
its 47th year, the ever lengthening list of programs presented there, the expanding "waterproof" flea market under new tent,
I'm excited to see the AWA enter into a new decade full of vim and vigor. The museum is going is really going to be icing on the cake.

I think that Bruce W2ICE would have been rightfully proud of the new direction for AWA. His vision, with its original carriage barn museum, are on track to grow into a world class facility,
preserving that very thing which was near and dear to his heart, radio history.

Cordially,
Bruce J. Howes W1UJR

Hi Bill,

Thanks for the good words, I'd love to see QST do a story on it as well!
It is really quite an undertaking, should be of general interest to hams.
Perhaps you can run that by Marc?
He's also free to clean up my grammar and spelling and use as a letter to the editor.

Think QST should also do a story on the new and improved AWA Fall Conference,
this year promises to really be something.

About your question - I was looking for early audios clips if I recall.
Did not get get much, but still interested.

Fighting off the roof ice-sickles today, ice dams on the barn roof, not a good thing,
cause water to back up under the shingles and get inside the building.

Look what landed in my mailbox yesterday, link below. :-)

9988. High Quality Bookcases - Where?

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-01-25 02:15:08 UTC
From: Bruce W1UJR
Topic: 9988 Message: 9988

I know that this is off the beaten track, but this is for all the book collectors out there.

After 45 years of collecting, I'm in need of a high quality set of bookcases.
I've got boxes of books on the floor of the barn, and all through out the house.
My folks gifted me with our old encyclopedias and other reference books over the Christmas holiday.

Ethan Allen, who made my original set some 20 years ago, has long since discontinued them, and the replacements appear to be pretty low grade, read China?

Everything I've seen to find both online or in the store uses particleboard, which I feel is just junk. I've been prowling the antique stores for some years now, much of what is there
does not match, is in rough shape, or is really expensive.

I need a set about 6-7' high, and about 12-15 long, maybe even 20 feet to allow for expansion,
can be broken up into 3 or 4 sections without a problem.

Any readers out there have any suggestions?
For reasons of expediency I would prefer a commercially made product rather than have someone craft locally, but can go that route if needed.

Thanks!

Cordially,
Bruce J. Howes W1UJR

Bruce,

There's nothing like custom built shelves, but they do take time.

Staples (and others) do have them. Also major
furniture stores. And look on line, Ebay and
generally on line. Try to get solid wood, not the
glued sawdust types. These sag in time. Solid wood looks better anyway.

Look for an old school being replaced. Someone
around here picked up 40-year old Oak shelves (not me, I missed the sale).

Also books are heavy, and the front of the
shelves may need stiffeners. (A small board
attached at right angles to the front of the shelves, to carry the load.)

My 2000 volumes are stashed all over the house in
a mix-mash of shelves that were available at the
time I needed them. I'd love to have them all in
one room in a library setting.

I have 3 new - matching ones in my living
room. I fastened them together to make one unit,
then fasten them to the wall (just in case) to
keep them from falling forward when being climbed by a grandchild.

Good luck,
73, John

Ikea, if there is one near you, has a large assortment of shelves. Their "billy" shelcves are very flexible and well made. They also have many types of wall mounted shelves, but these are in a different depoartment from the furniture shelves. You can also find some really neat lighting solutions for highlighting your collection.

73,

John, W4AWM (no connection with the aforementioned store)

Bruce,

We just bought some bookcases from a local "unfinished furniture store." (the bookcases are complete, you just put the finish on them) They had at least 3-4 different brands of bookcases, all seemingly good quality and solid wood. The one we ended up getting is from http://arthurwbrown.com/ Check them out and the website should tell you where your local distributors are.

Subject: [AWA] High Quality Bookcases - Where?

I know that this is off the beaten track, but this is for all the book collectors out there.

After 45 years of collecting, I'm in need of a high quality set of bookcases.
I've got boxes of books on the floor of the barn, and all through out the house.
My folks gifted me with our old encyclopedias and other reference books over the Christmas holiday.

Ethan Allen, who made my original set some 20 years ago, has long since discontinued them, and the replacements appear to be pretty low grade, read China?

Everything I've seen to find both online or in the store uses particleboard, which I feel is just junk. I've been prowling the antique stores for some years now, much of what is there
does not match, is in rough shape, or is really expensive.

I need a set about 6-7' high, and about 12-15 long, maybe even 20 feet to allow for expansion,
can be broken up into 3 or 4 sections without a problem.

Any readers out there have any suggestions?
For reasons of expediency I would prefer a commercially made product rather than have someone craft locally, but can go that route if needed.

Thanks!

Cordially,
Bruce J. Howes W1UJR

I had the same problem several years ago and the company I went with was Whittier Wood Products. They have a nice catalog of wall units and bookcases and other items. They are located in Eugene, Oregon. info@whittierwood.com. 1-800-653-3336. At the time they were sold by Chase Pitkin in New York which handled all the ordering and shipping.

The shelves are all hardwood, Poplar and Adler, and are thick and really solid. They are unfinished and come unassembled but can be easily combined to make real long assemblies. I liked the individual pieces because it made it very easy to stain the wood to my specifications and not worry on getting too much stain in the corners. The shelves are adjustable. I installed almost 42 linear feet of floor to ceiling shelves to display my collection and books. Doors are available that are solid or glass. I added some extra trim molding around the base and the ceiling to give it the built in look.

The shelves support my heaviest radios with out sagging. I added track lighting around the perimeter that really showcases my collection. An added bonus is that my wife is now happy to have the radios off the floor and on display.

Good luck.

John

From: whitebear1122@comcast.net
Topic: 9988 Message: 9994

I had the pleasure of operating in the Linc Cundall OT contest this past weekend. I had initially planned to operate the 1935 Gross CP-100 transmitter but ran into some snags and ended up using the 1929 Colpitts transmitter, a pair of 10's in push pull. Receiver was a 1936 NC-101. I continue to be amazed at the wonderful sounding CW that comes from the 101. Wish the bandpass wasn't so wide, but other than hearing everying 3 Kcs up and down the band, it's alot of fun to use. The green jeweled pilot light and green 'eye' give it a real mysterious and cool look. The PW dial is a real treat to use and really sets off the front panel. When I got the 101 it came with a NOS black PW dial as the owner said he replaced the original dial with a NOS. Luckily for me, the owner had included the original silvered PW dial. When I removed the silvered dial from the packaging I stopped breathing for a second, it was gorgous, worn around the knob, but still gorgous. I couldn't get that silvered PW dial on fast enough.. What a beautiful receiver. And the cool thing is that I'm using it on the air with my homebrew 1929 Colpitts "SKYMASTER" transmitter.

I had been working on a Millen Vari-Arm vfo to drive the Gross but I struggled with the Vari-Arm right up to the contest. I had the Vari-Arm oscillator working FB and it appeared to be very stable and very loud in the receiver, but I was unable to interface it with the Gross. The Gross was running full power but about 500 Kcs down the band. Vari-Arm was still spot on frequency, so the problem is somewhere in and around the Vari-arm coupler. The coupler coil is a mess so I'm going to remove it and possibly rewind it and check the mica coupling cap. I ran out of time and by Saturday afternoon realized the Gross would be an observer this year.

I worked 11 stations with 10 watts input on 80m and 1 station on 40m, most stations were in the Midwest but I did manage to work WU2D. Mike was my best DX. I recall working KB0ROB, W0CWU, K0KCY, WB9WHG, N9HAL, W0NYQ, WU2D, VA3AWA, W0VLZ, W0LGU, and don't recall the rest of the calls.

I'll be curious to see who all was on. Beyond what I worked, I heard maybe 3 other stations and that was it. There were two definately 1929 stations that were just above the noise but I wasn't able to pull out the calls so I'm guessing they were from the New England area. One had a pretty good chirp going otherwise I wouldn't have picked it up in the noise. I didn't hear as much activity or stations as last year at my QTH anyway. I did hear KB0ROB, N9HAL on ALOT, so I'm figuring those guys will have some pretty high scores.

So thanks for working me in the event. I'm planning on continuing to work on the Millen this month to finish it off so I can use it to drive the Gross. Next year I'll be back with some mega power with the Gross (60w). Now if I could only get some mega receiving going....

I'll be curious to hear exactly what rigs folks were using.

73, Scott WA9WFA

>I'll be curious to hear exactly what rigs folks were using.

It was great to read of your activities Scott and it sounds as though conditions were a tiny bit better back east than they were in the west. I guess we were just all spoiled by the superb conditions enjoyed during the recent '29 QSO Party. During the warm-up Wednesday affair, I heard no AWA'rs at all while on Saturday night I managed only three contacts (see log below). I was using my homebrew Paraset, which although only recently built, was first designed and built in the UK in 1941, so it sort of qualifies, in the 10W category (single 6V6 xtal power oscillator / two 6SK7 regen rx). Hopefully next year I will have something with a little more power as well as the ability to move around within the band as being rockbound in this event is a definite handicap.

LOG:

01/24/10 0302Z W8KGI 3560 559s/449r Jim NM TX'40 RX'36 PWR 45W
01/24/10 0312Z VE7AIJ 3560 589/589 Harry BC TX MOD RX MOD PWR 100W
01/24/10 0415Z KB0ROB 3560 559s/549r Harold MN TX '29 RX '41 PWR 30W

Heard / called only on other: WU2D in NH but nil answer.

Steve / 73

P- I only wish conditions had been as good as they were last night when I managed to easily work KB1KGA in NH on 3560 for state #50 on 80m with the Paraset :-)

I have a couple of the little Digital Signal Processors that were sold by Radio Shack. They plug into the audio out jack of a receiver and to a wonderful job on CW to get very sharp selectivity, up to about 500 HZ, I think. I think they no longer market them, too bad. If you get a chance to pick one up, I would recommend them, even if they are (choke, wheeze) sandy state.

Best 73,

9998. 1930 T/R Switching - How Did They Do It?

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-01-27 13:19:00 UTC
From: Bruce W1UJR
Topic: 9998 Message: 9998

As I put together my "authentic" 1930s station, one question which keeps coming up and I've kicked around
with other fellows more knowledge than I, is how did the early stations handle transmit/receive switching?

Reading the early ARRL Handbooks, I've seen various combinations of large knife switches, but never see a T/R relay.
I do use a T/R relay with the 1947 Collins 30K/75A1 station, but this was supplied by Collins,
don't think that is generally the case for the 1930s stations, so please correct me if I am wrong.
As cool as the knife switch is, wondering what thoughts are about what is and is not correct for this period.

I should note that I am using balanced line, and both the TX and RX here are set up for balanced input/output,
no coax, just wire.

I'm trying to construct this as accurately as possible, even down to the old QSL cards on the wall, so
I'm looking for your feedback, suggestions, thoughts, comments, even photos on this question.
Ideally if you've got a photo of an old station which clearly shows the T/R wiring layout, please send it over.

Thanks!

In all of the reading and studying of old photos of the period knife switches, some specialized for quick change over were all that was available to the average ham from pre 1920 through much of the 1930's. I would be interested also in pre 1940 change over systems.

Bruce,

For the 1947 station, you could also use the SA-13/U knife switch. I latch onto them whenever I can, as you can never have enough. It's a shame Suurplus Sales of Nebraska ran out. I was able to squirrel away about a half dozen, all NIB/NOS from WWII.

As far as T/R relays go, I have jackpotted two or three that were obviously meant for open wire, and probably date to the late Thirties or even earlier.

They are DPDT deals, I will have to mine for them and check coil voltages. At least they are all lost together in the same box.

I'm not sure if we're set up again to be able to take digital pictures, I'll have to ask the wife later. If I can transfer pictures to the computer, I can then email them to you.

73's, -Tom N1BEC/7

On my 1st station in 1957 I used a ceramic knife switch for the antenna transfer. None of the T/R switching was automatic.

To go from receive to transmit I had to go switch the receiver from receive to standby, Move the knife switch from the receiver to the transmitter, Switch the transmitter HV on (NO QSK). then start sending. To go back to receive this process was reversed.

It was my understanding that this was the common method in the early days.

In 1957 there were nice 2 pole ceramic knife switches available at your local hardware store. These were mostly locally owned small stores.

10002. Marconi Wavemeter

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-01-27 15:22:39 UTC
From: Larry Dighera
Topic: 10002 Message: 10002

Can any of you knowledgeable old timers help me date this Marconi's
Wireless wavemeter?: http://dighera.com/marconi_mp4_wavemeter/

Here are few questions:

1. What do the MP and MC wavemeter types signify?

2. Was this MP4 an experimental unit or a production unit?

3. With the dial marked '7' and '8' what frequency/wavelength
does it cover?

4. Was it used in conjunction with Marconi's investigations
of short waves?

5. Was it used in conjunction with direction finding
equipment?

6. When was it made?

7. From the rotary lid latch design it seems to match those
wavemeters made during the pre WWI era. Would you concur?

I've received these hints so far:

... estimate by its tag that it would be from the early 1920's and
used at commercial shipboard or land stations. The dial is
reminiscent of the Type 11 Radio Direction Finder, which dates
from 1919 - 1926.

The identification plate is the giveaway which is typical 1920's,
Marconi were still using components such as the rotary lock as
late as the 1930's on military items supplied to British army
simply because it was cheaper than designing something to replace
it which would be no better, they were still using the Marconi V2
intervalve transformer in aircraft sets during WW2.

It is possible the original blueprints might still be available at the
Oxford Museum of the History of Science or the Oxford Bodleian
Library. It is my understanding that the Marconi Collection
<http://www.mhs.ox.ac.uk/marconi/collection/> was presented to the
University of Oxford by the Marconi Corporation in 2004. And it
appears that there was a large store of documents included with it.
Perhaps a discrete inquiry as to the possible existence of the PS2170A
drawings might be productive.

I am grateful for insight or information you may be able to provide.

Bruce,

In 1919, "Val" Leach a U.S. Navy telegrapher of WWI, disliked the awkward method of managing transmitter and receiver change over. He developed a device called a "Break-in" relay.

Search Google "Leach Break-in relay" will bring both historical information about Leach as well as images of the devices.

The Leach break-in relay uses an armature coil pair similar to a sounder. The coils are part of a voltage loop, like that of a TTY loop with the key in series. The contacts are progressively actuated as the relay operates. There are a set of high current contacts for the antenna and a set of contacts to open the receiver antenna.

As a break-in relay, every dit/dah made by the key is an actuation of the relay. For us "modern" operators, this may be annoying. My "Elmer" was Irving Vermilya, in his shack he used a modified Bunnell telegraph relay as a break-in relay with the attached Prince Albert can to key the transmitter. Since he was proficient in both American & Continental Morse, the clattering of the Bunnell was normal.

I would be interested in seeing a Leach break-in relay put into practice.

This is exactly how I do it. I have a multiple pole relay in a box with a power supply and sound-proofing. The key runs the relay coil and one set of the 3PDT is ANT in the center RX = NC, TX = NO Another set is for receiver muting and for latching if you want semi-break in. The third set is for flashing lights or whatever 80).

I've used is up to 300 watts and 30 WPM with no problems.

Doug WA6VYN

Bruce,

Hi Lou,

I guess you think we're a bunch of weenies? Well maybe we are
compared to you guys from the NORTH who keep a snowmobile all tuned
up and ready to go. What makes it really bad here are the people who
can't drive in the snow or ice that creeps the rest of us out when
they try. They usually take a few innocent folks with them when they
go. Black ice is the big killer around Ron's and here in southern NJ.

Ron,

Sorry to hear about the cancellation, but I 100% agree with you. I learned to drive at night, up North, in Winter, so I can drive in the snow, but I would prefer those that don't know how to drive in it to stay home.

Many times I've had to rescue my wife who ventured out when it was fine, but turned to crap (she grew up in FLA).

As an amusing aside, When I experienced my first "big" snowstorm here on the West coast, I couldn't figure out why I was one of a handful of people at work for a couple of days, as there was only about 4-5" of slush on the ground.

It was only later that I learned that the local denizens panic and got into some form of paralysis whenever the ground turns white.

It was a hoot two years ago when I was standing on 14' feet of snow at one of my commsites touching antennas that were 20' off the ground...

Hi Bruce!

Attached are three photos of the ancient open wire TR relays that I have.

The nicest one is from Meissner, and sports Model 28-1004, 110 V.

Arm spacing is 2-1/2" center to center.

The runner up is a porcelain jobbie from Advance Elec. L.A. Cal. and is marked "Part No 21B001", Type No. 400", 115 Volts A.C.", (undecipherable) "Amps".

Arm spacing is 2-3/8".

The last one was obviously part of a much larger assembly. The board is marked "SM-C-200325". The relay itself is marked: Telex-Aemco, Div of Telex Inc, Mankato, Minn, 51-2698, 115 V AC, 400 Ohms, DP DT.

The spacing between arms is 1-5/8".

Hope this helps!

Imagine my surprise when I 'discovered' a small museum here in Minneapolis full of Coronado radios! After I wrote an article about it last year for the Northland Antique Radio Club (NARC) newsletter, I've had many local collectors (including Pavek Museum of Broadcasting staff) tell me they also had never heard of this little gem, although it has existed for many years.

Tonight I uploaded the article to the NARC website and thought some of you might be interested:

Hey John,

I don't mind them. I don't have the time to go looking around Ebay and if someone finds something of interest to some of us on the group why not share? Most of the items are not of interest to me as I like Zeniths, not Nationals, but I am looking for an SX-42 and someone sent me an Ebay reference.

Just use the delete key that takes care of all the unwanted stuff. I for one say keep it coming.

Regards,

Joe

Ebay has changed and grown drastically since I first signed up in 1997. Back then searches were easy in any category and items usually limited in number so most could be looked at. No more. There is way too much. I have made over 4000 transactions on ebay and thankfully, had I found more items I may have bought more stuff I do not really need. Regardless, I have about 100 automatic searches saved, and I still miss a lot of nice items, that I may or may not be interested in buying, but, at the same time I do not mind looking and on some see how the action is to get a feel as to today's value on some items. Consequently, I do not mind those posts at all, in fact, I welcome them, and usually check them out and also see what else the seller may have to offer. One can never tell. Those posts do not take up any space, and the delete key is right there to take advantage of if you so choose. 73 - Mike

Hi Lou,

I, for one, appreciate your eBay tip-offs. I agree with Joe K.

It's part of the fun of the AWA reflector.

However, in this case, I'm not sure that the SW-3 coils are such a great deal, as *five* of the eight sets are repro forms. Still, if someone is looking to wind their own....and the repro forms are no longer made....Hmmm, maybe it is a good deal.

73,

John, KC2UAK

Hi Joe,

What you say is true for you and certain others, but for the rest of us, it is pain. I could do a Hallicrafters search and totally jam the system with items I think might be of interest to other Hallicrafters collectors. For instance, S-38s are very popular these days. One sold from a private reflector listing the other day in just a few minutes. If I was to post a listing for every S-38 I saw on eBay here, I would no doubt have the reflector admin boiling. What's sauce for the goose is sauce for the gander. I've said my 2 cents and I am done with the subject.

If this is so, your mail agent has filter software you can use.

I enjoy the pointers Lou posts. There's others who continually pimp their own stuff....(FT243s for example) which annoys me, and a mail filter neatly solves that .

You might want to investigate that, as it takes only seconds to implement.

Topic: 10027 Message: 10037

With all due respect to John, Lou's posts are helpful, and they actually are not that prolific to "jam the system".
I think I see perhaps 5-7 posts per week, depending on the time Lou has available.

I've been tipped off several time to items which I missed or even forgot I needed because of Lou's posts. Though I let the last item he suggested slip through my hands, I see his posts much more as a service than a problem.

Face it fellows, there is not that much traffic on this reflector anyway, may 5-10 posts on a very good day. A few little eBay items doesn't hurt anyone, and as Mike N4FS and others have pointed out, it can actually do some of us some good.

I realize that not every eBay post may be personally helpful, but would you deny others the opportunity to benefit?

Regretfully, I pass on the obituaries of two Rochester, NY area AWA members this last week. Both were regular volunteers at the museum and warehouse over the last two decades.

Art worked with the museum's database development for a few years, and volunteered as a museum guide and warehouse worker. Paul was a museum tour guide and occasional warehouse volunteer. Paul had a passion for old radio shows and musicians, and...for his old 1960s vintage red Oldsmobile convertible.

Both good men. May they rest in peace.

Chuck Bliley
K3NAU
Rochester, NY

Obituaries from the Democrat & Chronicle Newspaper Web site, January 31, 2010

DeBruycker, Arthur F.

Fairport: January 29, 2010. Survived by his loving wife of 35 years Diana; children, Barbara Barrington, James DeBruycker, Sandra (David) Malinowski, Linda (James) Schaap; step-son, Dale (Sherri) Bramer; 11 grandchildren; 3 great grandchildren. Arthur worked as a television engineer for several years around the Rochester area. He was also a ham radio operator [W2YGW] for over 50 years. Arthur was also a US Army and Navy veteran serving in WWII and the Korean war.

No prior calling. The family will hold a Memorial Service at the First Congregational UCC Church of Fairport later this Spring to be announced. In lieu of flowers, donations may be made to the First Congregational UCC Church of Fairport in his memory.

Arr: R.H. Keenan Funeral Home
223-0094 or 223-4840

Feldman, Paul T.

Rochester: January 24, 2010. He leaves behind his loving wife of 62 years, Harriette D. Feldman and one sister. Paul was an inspiration to all for his courage and strength during his long illness.

The family wishes to thank the marvelous staff at Strong Memorial Hospital for the wonderful care they provided.

Services were held privately at White Haven Memorial Park. At the request of the family, there will be no home visitation. Donations in Paul's memory may be made to Strong Memorial Hospital. To leave a message of condolence,

please visit:

www.BrightonMemorialChapel.com for a photo gallery including his Olds convertable.

From: Mike Feher
Topic: 10041 Message: 10041

First, I would like to apologize to posting to so many lists simultaneously. My only justification, at least to me, is that what I am searching for will probably be close to impossible to find. Right now I own three of the subject items and two T-39Bs, along with multiple power supplies. I also have numerous, at least 25, BC-746 plug in tuning units. Alas, none for 3885. Even though the majority of my tuning units are new in the box, the two closest in frequency, on 3825, are missing crystals. I am sure I could take the crystals out of any of my BC-611*s on 3885 and make them work in there, it would be a lot nicer to have a real and complete BC-746* marked 3885 plug-in. Having two would even be nicer, but, just one would make my year, and at the same time encourage me to get active again in the hobby I love. If you have one, or know of someone that does, just dictate the terms and I am sure I will comply. The reason I am so hot for an original one is that my BC-745 is NOS, in fact, I opened the original boxes and seals that it came in. I was the first to open it since it was originally packed over 50 some years ago (I got it about 15 years ago). One of my T-39Bs is essentially as new and I also have an original box for the T-39B as well. Thanks & 73 - Mike

Chuck -

I am greatly saddened to hear about both of these SKs. Unfortunately, it is not the first such notice I received today. Mr. SW-3, Thomas O. Bohlander, also passed away and further details are in Tom's email below:

"Everyone,

My father passed away peacefully yesterday afternoon about 3:30 p.m. while I was in attendance at his room at the Artman Lutheran Home in Ambler, PA.

No funeral service arrangements are set yet.

Tom"

Paul's call was W3VVS and his son Tom is WA3KLR. 73 - Mike (your old college room-mate)

Subject: [AWA] Obits: Art Druycker and Paul Feldman

Regretfully, I pass on the obituaries of two Rochester, NY area AWA members this last week. Both were regular volunteers at the museum and warehouse over the last two decades.

Art worked with the museum's database development for a few years, and volunteered as a museum guide and warehouse worker. Paul was a museum tour guide
and occasional warehouse volunteer. Paul had a passion for old radio shows and musicians, and...for his old 1960s vintage red Oldsmobile convertible.

Both good men. May they rest in peace.

Chuck Bliley
K3NAU
Rochester, NY

Obituaries from the Democrat & Chronicle Newspaper Web site, January 31, 2010

DeBruycker, Arthur F.

Fairport: January 29, 2010. Survived by his loving wife of 35 years Diana; children, Barbara Barrington, James DeBruycker, Sandra (David) Malinowski, Linda (James) Schaap; step-son, Dale (Sherri) Bramer; 11 grandchildren; 3 great grandchildren. Arthur worked as a television engineer for several years
around the Rochester area. He was also a ham radio operator [W2YGW] for over

50 years. Arthur was also a US Army and Navy veteran serving in WWII and the

Korean war.

No prior calling. The family will hold a Memorial Service at the First Congregational UCC Church of Fairport later this Spring to be announced. In lieu
of flowers, donations may be made to the First Congregational UCC Church of Fairport in his memory.

Arr: R.H. Keenan Funeral Home
223-0094 or 223-4840

Feldman, Paul T.

Rochester: January 24, 2010. He leaves behind his loving wife of 62 years, Harriette D. Feldman and one sister. Paul was an inspiration to all for his courage and strength during his long illness.

The family wishes to thank the marvelous staff at Strong Memorial Hospital for the wonderful care they provided.

Services were held privately at White Haven Memorial Park. At the request of the family, there will be no home visitation. Donations in Paul's memory may be made to Strong Memorial Hospital. To leave a message of condolence, please visit:

www.BrightonMemorialChapel.com for a photo gallery including his Olds convertable.

10045. 56 Years Ago Tonight - Major Howard Armstrong

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-02-01 01:33:51 UTC
From: Bruce W1UJR
Topic: 10045 Message: 10045

Major Edwin Howard Armstrong.
56 years ago tonight, a great man of radio, arguably one of the greatest men, went on to his reward.

If the name E. Howard Armstrong does not ring a bell with you, it should, for without Armstrong, radio as we know it would not exist.

The Major, he earned that rank during the first World War, had three particular memorable inventions, the forming the very foundations of radio today: regeneration, the superheterodyne, and frequency modulation.

It is hard to look at Armstrong's life and not feel him ill used by his former employer RCA. RCA had been building televisions and FM receivers for eight years and despite using his circuit designs, paid absolutely nothing to Armstrong in licensing fees. Knowing this his patents would expire in but a short time, Armstrong took action with a patent infringement suit against RCA in 1949. Armstrong asked RCA for a $2.4 million settlement but they came back with an offer of but $200,000, which didn't even begin to cover his legal fees.

Plagued with legal challenges, as he had been for nearly all of his professional career, on January 31, 1954, he wrote a two-page letter to wife Marion, and left it on his apartment desk.

He dressed neatly in an overcoat, hat, scarf, and gloves, and walked out a 13th story window of his apartment at the River House in New York City.

Armstrong's widow continued his legal fight over the twenty-some infringement suits and over a period of about 13 years won over $10 million.

An interview with Armstrong's attorney, Dana M. Raymond, can be read here -->> <http://www.fathom.com/course/10701020/session2.html>

An excellent book on the life of Major Armstrong is Lawrence Lessing's "Man Of High Fidelity", which be viewed and read online at -->> <http://www.archive.org/details/manofhighfidelit002474mbp>

Cordially,

Bruce J. Howes W1UJR

Subject: Funeral Arrangements for H. Paul Bohlander

H. Paul Bohlander W3VVS passed away late Saturday afternoon, January 30, 2010, 41 days after breaking his hip and fighting a mild heart attack and failing kidneys. He was 90 years old.

He will be cremated and the memorial service will be this coming Saturday morning February 6th at Carmel Presbyterian Church, Glenside, PA 19038. Greetings with the family from 10 - 11 a.m., and the memorial service is at 11 a.m.

Carmel Presbyterian Church, 100 Edge Hill Road, Glenside 19038, is located at the northwest corner of Mt. Carmel Avenue and Edge Hill Roads in the North Hills/Glenside/Cheltenham area.

My father's ashes will be buried in Port Clinton Ohio at a later date yet to be determined, in plots where my mother's mother and father are buried.

Please, no flowers. Donations can be made to Carmel Presbyterian Church general fund or Phil-Mont Mobile Radio Club Scholarship Fund.

Lou,

Why don't you make a list of those wanting this SPAM (Junk) Ebay
email and just send it directly to them. This way they will be
happy, you will be happy, and the rest of us will be happy. Win-Win-Win!

The only thing you are doing now is creating hard feelings with your friends.

We all get enough SPAM email and don't want any more. Please stop.

Lou - I for one, enjoy your notifications and have at times found something
that I otherwise would have missed. If I see a posting's subject line that
doesn't interest me it is just a simple one-keystroke operation to eliminate
it. I say keep them coming.

Lou,

Your posts and your intent are appreciated by me. And, I suspect many others. Don't cave in to those whose life is built around finding fault. They have a delete key just as all of us do. If they are "offended" by your or anyones post.....tough crap. They can either sign off and be satisfied.....or hit the delete key when appropriate. If an occasional post caused them problems, can we just imagine what happens when a real problem meets them face to face??? Bottom line.....GROW UP.

Please continue your posts.....

Best 73 to all.

OK I'll stop, but, you see, I would see something that I thought might "make" someone's project or an exciting addition to a collection and wanted to share those possibilities. Hmmm... Maybe that's the problem, sharing and the competition that that sharing brings.

Anyway, I'm going to stick my 210 out to satisfy my curiosity and ask that you bare the disgruntlement and post here weather or not you found my Junk useful. I do not envision a, "Louie's eBay Forwards" site or list.

Gentlemen and Ron, About lou,

Personally I don't mind an "occasional" posting, because at times there is something significant and worth mentioning. Postings by one person over and over again is something different.

lou, I am disappointed with you. I suggested a pleasant and efficient gentlemanly way to solve the problem, by taking it off of the list. Everyone who wants the postings will still receive them and you will not have any extra work to do this, just make the list. But it seems that "you" have decided that "you" want to disrupt the peace and harmony of our group instead. Your actions will be driving good people away, as most of us don't like in-fighting, which is exactly what you are causing.

Additionally lou has sent a disgusting email to myself and to Ron, W4RON, that is totally inappropriate. lou, this shows your true character; I thought you were a better man. It is apparent you are not trying to keep the peace and harmony, but are intentionally being disruptive. Too bad that you choose to be this way. But it is your choice.

Becoming a SPAMMER is joining a group of people who are generally despised because we don't know who they are. In this case we know who you are and we can take steps to solve the problem.

Ron, due to the actions by lou in making it personal with his disgusting email, I am requesting you take some action to restore the peace and harmony of our list. It is not fair that one persons actions have to be endured by all, especially when there is an alternative. Most lists I belong to ban Ebay cross postings altogether just because of the action of a very few, like this, who have nothing better to do than irritate those who used to be their friends.

So be it.

With due respect John, it seems those who like the occasional eBay posting are
in the greater majority than those who do not.

Now this is a hard one, I consider both you and Lou a friend, and know that
you both are active in and contribute to the vintage radio community.
So perhaps a simple solution would be that you change your email settings to automatically
delete any post mentioning eBay, or if you like, any post by Lou. If the procedure
to do this is unfamiliar to you, I'd be happy to walk you though the process,
it will just take a few moments.

If you are suggesting that Ron ban, or remove Lou from the list, then
you may be opening up a can of worms, and the list will likely lose
many other members. We already lost members over careless
comments regarding the provence of home brew rigs. I for one
don't see that is worth the occasional aggravation of simply clicking the delete key.

In summary, I'll repeat my earlier post about this matter.
I realize that not every eBay post may be personally helpful, but would
you deny others the opportunity to benefit?

Cordially,
Bruce J. Howes W1UJR

10068. Gross CW55/CP55/CB55 Information?

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-02-02 15:09:18 UTC
From: Niel - W0VLZ
Topic: 10068 Message: 10068

Anyone have information on the Gross CW55/CP55/CB55? According to
Moore's "Transmitters 1930-1980" it uses a couple of T-20s in the PA.

I have a couple of TZ-20s and I need to add some power before next
year's AWA LC OT CW Contest. According to the Taylor tube manual except
the bias I can run these like T-20s.

I could use a schematic/chassis photo/parts list.

tnx,
Niel - W0VLZ

John,

I concur with Bruce you should change your email settings if you find posts from Lou objectionable.
I don't feel that Lou's posts "disrupt the peace and harmony"; it seems a majority of those on the list share that sentiment and believe Lou's posts are worthwhile and should continue. Further, I don't consider a post about something pertinant to the hobby on ebay to be spam as you claim. Perhaps you just have something against Ebay? For some folks ebay is an important or possibly the only venue to find a part or piece of gear they need to complete a project or collection.
Banning or removing Lou from the list WILL disrupt the "peace and harmony"
I strongly suggest you reconsider any notion of taking action against Lou.

Regards,

Joe N2OUV

**********8

Suggestions:

I.) Prefix the subject line of post that only contains a link to Ebay with
a key string such as [ebay] so they can be ignored by those not interested
in those, while still reading other posts from the member.

2.) For the benefit of those who do not have an Ebay window continuously
open, include the entire URL so it can be reached with a single click. For a
casual interest in some items, it is tedious to get to the page by item
number, especially with dialup. The item number can be easily extracted or
included separately for those who want it that way.

If I had time I would like to explore Ebay for the pictures and prices so
but it is very annoying to open post to find only a number when I don't have
time for that.

The delete key works well enough for those not concerned with Ebay listings, as I can attest from personal experience. (I don't have an Ebay-sized wallet - I prefer scounging under the tables at flea markets and hamfests. But that's just me.)

Therefore the Ebay posts Lou has been making neither interest, nor bother, me.

The 'Bay - I want a dedicated workstation and T-1 line for it! However, "Da Boss" would get a tad cranky.

If Lou was selling this stuff, or "pimping" for a friend, I'd have a beef. However, as-is, it's like having a Personal Shopper, continuously cruising and flagging "stuff" for me. I scan them, forward interesting goodies to my home email and check them out at my leisure.

If it gets to be too much, ON goes the filter. No problemo. Life is too short.

My $0.02 worth.....

In a message dated 2/2/2010 11:05:13 AM Eastern Standard Time,

bbc39668@... writes:

I concur with Bruce you should change your email settings if you find

posts from Lou objectionable.

I don't feel that Lou's posts "disrupt the peace and harmony"; it seems a

majority of those on the list share that sentiment and believe Lou's posts

are worthwhile and should continue.

**********8

Suggestions:

I.) Prefix the subject line of post that only contains a link to Ebay with

a key string such as [ebay] so they can be ignored by those not interested

in those, while still reading other posts from the member.

2.) For the benefit of those who do not have an Ebay window continuously

open, include the entire URL so it can be reached with a single click. For a

casual interest in some items, it is tedious to get to the page by item

number, especially with dialup. The item number can be easily extracted or

included separately for those who want it that way.

If I had time I would like to explore Ebay for the pictures and prices so

but it is very annoying to open post to find only a number when I don't have

time for that.

(I don't have an Ebay-sized wallet - I prefer scounging under the tables at flea markets and hamfests. But that's just me.)

Hi Larry!

I'm with you 100% there! Sometimes, regrettably, there is an item that is needed that doesn't appear in a timely fashion from underneath a table, and then I'm forced to do without, or use Ebay...

We have Rickreall coming up shortly (Salem, OR Feb 20th), and Mike & Key (Puyallup, WA.) two weeks after that.

Here's to hoping that the "want list" diminishes somewhat between the two of them...

You are quite right James, Lou has been removed from the reflector.

There is currently an effort to have the AWA set up a proper reflector,
both moderated and controlled by the AWA proper. This should
allow fair and rational treatment by members subscribed, and prevent
the mercurial actions we have all been witness to over the last
several months.

I for one think that this is a good idea. I hate to see the good name
of the AWA besmeared by the ill behavior of a few.

This is much more afoot that I can not directly speak to at this time,
suffice to say that powers much greater than I are at work here.

Cordially,
Bruce J. Howes W1UJR

From: Joseph W. Koester
Topic: 10077 Message: 10085

I, for one, think this is a bunch of baloney. If we are headed there this is a step in the wrong direction and I will have to decide whether I want to continue in a "proper reflector,
both moderated and controlled by the AWA proper." This thing has been working quite well and we need a moderator like we need more government control over our lives.

This is absurd - I took some shots at the AWA over the AWA Organization - Museum quandary and invited them to join us here on the reflector and to provide some feedback and dispel some rumors. If they wanted to be part of this thing it was never evident to me! Yes I don't like the way they have done some things, they could communicate better, but I have the freedom to post and share my concerns with the other members. Sometimes I am all wet, other times even a blind hog can find an acorn.

I don't know if "the AWA" is taking steps to get this thing under its control. I think it runs quite well under Ron Lawrence without any help. If the "greater powers" are going to make some sweeping changes and take an active hand in the control of this reflector this is not what I had in mind when I invited the "greater powers" to come join us.

If the AWA wants to set up a proper reflector and control it then they can. But I am sticking with Ron and the CC-AWA guys as long as this one is going.

Bruce I don't know you, but you have made some good posts in the past and I see that you do care for the AWA, and I do too, I just don't agree with some past decisions, but that's over, I rejoined and I am looking at Rochester again this year. But in all due respect, if I read your message correctly, then it is in fact a sad day for all of us and I respectfully disagree with your post.

Sincerely,

Joe Koester, W4NSA

10086. Re: [AWA] VE3AWA Gone

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-02-03 15:41:31 UTC
From: W4RON@carolina.rr.com
Topic: 10077 Message: 10086

I had no intention of discussing this on the list, but
it seems there is a lot of misinformation floating around
and I need to clear it up.
If you use other forums on the web you will see that moderator
actions are never discussed on the group. On these groups if you
question the moderators actions your message will be removed,
do it to many times and you might be removed.
This is not a moderated group, and so far I never felt the need
to make it one.

Louis Vermond was NOT removed because of his ebay postings.
Read that line again, "was NOT removed because of his ebay postings".

The reason he was removed was because he sent a very offensive
message to another group member that was critical about his ebay
postings.
This can not, and will not be tolerated.
Keeping it on the list is one thing, but when it's sent directly
to a member off the list, that's not going to be allowed.

The person that the message was sent to has suggested that if Lou
will admit what he did and apologize for it, I should allow him
to rejoin. I will do this. I'm copying Lou this message.

On another subject, the AWA is NOT about to take control
of this list, they can not. I am the owner this list, it was
established with the approval of the AWA President.
Before I would allow AWA to take control of the group, I will
delete it. I can do this with one click of my mouse.
I would really hate to do it, we have well over 400 members,
it would be sad for a few to ruin this for all of them.

Please let's get back to discussing radio collecting.

73, Ron Lawrence

Eddy,

Is your email set up to keep out spam?

I never receive emails that I send to mail lists, they always get caught by the "Spam Blocker" in my email system, even though I tell it that my own email address is OK.

So if you have any spam blocking, that may be where your messages are going.

73 & have fun,

Duncan, K2OEQ

Topic: 10077 Message: 10088

Hello Everyone
I really enjoy the free spirited discussion on this group. Even more I enjoy the postings about antique radio, historical comments and the multiple aspects of this hobby which I assume is the the tie that binds us all together.
I can think of no reason for the AWA to establish it's own reflector or to interfere in the operation of this one. I know of no such effort. The AWA is all about the free interchange of information and ideas. I do not speak officially for the AWA but as a participant in this forum I do feel that everyone has the right to an opinion or comment within the framework of decorum and good taste.
 Personally, I can not see how RonLawrence has the time to take care of this and perform his many other duties. Maybe we might all tone it down a bit and make his job a little easier.
Now I did see some thing on Ebay.....

I hope you are mistaken, Bruce. I hate it when the "...powers...are at work..." That never bodes well for everyman.

Regards,
Paul Farmer, K3YFQ

P.S. I also hate when someone with all the power tries to treat me fairly.

P.P.S. "Mercurial actions?" I assume you are not talking about the element mercury or the Roman God Mercury. That leaves either "...the characteristics of eloquence, swiftness, shrewdness, thievishness..." or "...rapidly changing character." Putting the best light on things, I'll assume you mean we have all been eloquent here "...over the last several months."

10090. Re: [AWA] VE3AWA Gone

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-02-03 16:17:13 UTC
From: Bruce W1UJR
Topic: 10077 Message: 10090

Ron,

So Lou was deleted for an action which occurred OFF the list?
Please explain to us Ron how something which occurred OFF the list
has any relevance to his account being deleted ON the list?

Was that member not able to respond to Lou directly about the matter?

Your action sets a precedent that will need to be followed so that
other members can expect equal and fair treatment.
Can we therefore assume that you will delete ANY member of this list
who offends ANY other member with an action, word, or deed which
occurs OFF the list? Sorry, don't see the causal nexus there, will
need an clear explanation of the logic behind that.

Your threat to delete the list and therefore deprive "well over 400
members" is a clear demonstration of the irrational and mercurial behavior
that I and others have complained about. Do you not see how
illogical such a statement is?

Thank you for willfully and openly providing the facts needed
to accelerate the actions already in place.

This will be my last comment about this matter ON the list,
please be assured that it most assuredly will NOT be the
only action I, and others, will be taking moving forward.

You may control this list, but you most certainly do NOT control
the AWA name, and that is the key point of this matter.

I am appalled that an organization which I cherish and support
has had it's good name damaged by the irrational actions
of a few.

Cordially,
Bruce J. Howes

Topic: 10077 Message: 10091

The AWA Reflector is like the MAARC Listserv. I think it is called a reflector since you post an email and it is "bounced" or reflected to all the members on the email listing or reflector. There are over 400 people on the CC-AWA reflector and it is an excellent way to ask questions of a wide audience and to share information. I have benefited greatly from being a subscriber to this forum and I would encourage all of you folks to do the same.

Additionally I encourage each of you to attend the CC-AWA (Carolina's Chapter - Antique Wireless Association) convention in Charlotte next month. Although it is a "Chapter" it is loosely affiliated with the AWA and is in reality a free standing group of collectors mostly from the Carolinas and surrounding area. It is a fine organization and I have attended their meets since the very first ones back sometime in the 1980's - I think. Ron Lawrence and the group do an excellent job with their convention and with the Reflector.

Paul Farmer will be bringing a copy of the brochure advertising their meet and it is one of the best ones I have ever seen. I would like to see MAARC do something along those lines for Radioactivity. Imitation is the sincerest form of flattery - is that the saying? Please do consider Charlotte this March 25-26-27. You will love it.

Regards,

Joe

Bruce why don't you just let it go? It does more harm than good. We don't know all the facts and it is none of our business. None of us are downing the AWA nor do we have bad intentions toward it. Your implied actions and thinly veiled threats are hardly in keeping with the reasons we are all subscribers.

You are simply fanning the flames of a small fire we thought was extinguished.

Shall we concentrate on old radios and knock off the crapola?

Regards,

Joe

10093. Re: [AWA] VE3AWA Gone

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-02-03 16:36:01 UTC
From: w4awm@aol.com
Topic: 10077 Message: 10093

I have to wade in on this just one more time.

While I hate to see anyone banished from any list, and I don't know that transpired in the off line emails, not is it any of my business, but it was evidently serious enough that it caused some action to be taken.

I think what started all this was the references to eBay listings by this gentleman. While I am sure he did it as a well meaning gesture, it was annoying to some folks, myself included.

Someone made the suggestion that he establish a list of those who wanted to receive these references and send them to that group. He would only need the time to make the list once, and obviously he spends much more time searching eBay than it would take to draw up the list. In any case such an action would hopefully make everyone happy.

I respectfully suggest that the various parties "bury the hatchet," make whatever apologies that might be deemed necessary and allow the gentleman back on the reflector. It would be nice to request that he establish a list as mentioned above, as a condition of being welcomed back and good form if he would adhere to that request.

Lets put this to rest.

73,

John, W4AWM

Bruce, could you be a little more vague?

Very exciting that "actions already in place" are being accelerated!

AWA's good name has been damaged? Hmmm... I'm heartened to know that you think an organization that you "cherish" has (I mean had) a good name (even if you ARE appalled). So now that it's name has been damaged, that name is not so good anymore?

Hoping the AWA can continue to live with its name. (There was talk awhile back that they were going to change the name to a "Museum" or something.)

I remain,
AWA LIFE Member,
Paul Farmer, K3YFQ

10095. OT: Old Movie - antique radio, QRP

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-02-03 17:09:34 UTC
From: k1nun@netscape.net
Topic: 10095 Message: 10095

Hi,

I am a rare poster, but am cross-posting this to only two groups that might enjoy a bit of entertainment.

"Submarine Alert" a 1943 movie: http://www.archive.org/details/submarine_alert
"Nazi spies use a stolen shortwave transmitter prototype to broadcasttop secret shipping info to an offshore Japanese sub. To nab the spyring, the Government has the West Coast's top radio engineers fired andshadowed to see if the Nazis recruit them to complete work on theprototype radio. Radio engineer Lew Deerhold, a resident alien withouta job to pay for his adorable little ward Gina's life-saving operation,falls prey to the spy ring, and is swept up in a maelstrom of deceitand danger."

How does Mr. Deerhold know Morse Code, enough to decode the enemy high-speed CW? And, yes, it is real CW.
How does he convert an intercom loudspeaker into a QRP radio transmitter?
How is that young Johnny just happens to be listening to his Hallicrafter radio, close enough to copy Deerhold's CW message?
Does the clinking of vacuum tubes on his desk sound realistic?
Does Mr. Deerhold's workshop look like yours?
And, finally, does Deerhold find true romance?

This is an "inspirational and patriotic" movie that antique radio aficionados and Ham ops might enjoy. Remember the time frame and take a look at a radio adventure, yesteryear style. It is about 70 minutes long.

My apologies to those who consider this OT, but you might enjoy this too! Please do not nail me or each other for what is considered patriotic etc. This is intended as a fun posting.

73,
ERIC
K1NUN

"Nazi spies use a stolen shortwave transmitter prototype to broadcasttop secret shipping info to an offshore Japanese sub. To nab the spyring, the Government has the West Coast's top radio engineers fired andshadowed to see if the Nazis recruit them to complete work on theprototype radio. Radio engineer Lew Deerhold, a resident alien withouta job to pay for his adorable little ward Gina's life-saving operation,falls prey to the spy ring, and is swept up in a maelstrom of deceitand danger."

How does Mr. Deerhold know Morse Code, enough to decode the enemy high-speed CW? And, yes, it is real CW.

How does he convert an intercom loudspeaker into a QRP radio transmitter?

How is that young Johnny just happens to be listening to his Hallicrafter radio, close enough to copy Deerhold's CW message?

Does the clinking of vacuum tubes on his desk sound realistic?

Does Mr. Deerhold's workshop look like yours?

And, finally, does Deerhold find true romance?

This is an "inspirational and patriotic" movie that antique radio aficionados and Ham ops might enjoy. Remember the time frame and take a look at a radio adventure, yesteryear style. It is about 70 minutes long.

My apologies to those who consider this OT, but you might enjoy this too! Please do not nail me or each other for what is considered patriotic etc. This is intended as a fun posting.

73,

ERIC

Fellow Thrill Seekers
I downloaded this move in high resolution. It takes a while (about 10 minutes), as the server they use is a little slow. Anyway, it looks like an interesting movie.
I plan on doing a review. Or, on this list I should say a "critical" review (Hi).
As my grandfather would say, it looks like a hoot.

I own that film. I was thinking the same things. It is a fun adventure film with predictable cheesy type plot. I was surprised to see that the focus was on com-gear. I recommend it as well. This posting is the second useful and fun one i have seen since joining this list earlier this week. So far it has been hardly more than useless infighting. Thanks.

10100. RE: [AWA] VE3AWA Gone

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-02-03 22:26:23 UTC
From: Ludwell Sibley
Topic: 10077 Message: 10100

You know, we've been-there-and-done-that. A somewhat boastful story, occupying most of a page, in the Feb. 2003 "OTB" announced a new "message board" feature for the AWA Web site. It was moderated, of course, and reportedly limited to antique-radio topics. Anyone with praise or flak for AWA itself was supposed to use a "contact" feature on the site to reach someone in the AWA Command Element.

It was supposed to reverse the decline in membership, provide a service to the hobby, etc. There was no mention of AWA-based amateur-radio activities. Interestingly, "available on eBay" postings were forbidden.

This was a stab-in-the-back for Ron Lawrence, who had cleared the establishment of the present reflector with then-President Fizette. With presidential lip service, Ron's service went live in - what? Late 2000? Early 2001? He was not exactly welcomed by the AWA apparat. The box below contains all mentions of this reflector in the "OTB" / "Journal" between 1960 and the end of 2005:

vvvvvv
v v
v v
Vvvvvv

Despite the official chill, Ron's reflector obviously still serves us, while the message board never amounted to much and fizzled out some years ago.

Do we need a tame, bowdlerized, politically correct reflector kept on a leash by the very clique that has made a mess of AWA affairs? Fuggedaboudit.

Ludwell Sibley

Subject: Re: [AWA] VE3AWA Gone

You are quite right James, Lou has been removed from the reflector.

There is currently an effort to have the AWA set up a proper reflector, both moderated and controlled by the AWA proper. This should allow fair and rational treatment by members subscribed, and prevent the mercurial actions we have all been witness to over the last several months.

I for one think that this is a good idea. I hate to see the good name of the AWA besmeared by the ill behavior of a few.

This is much more afoot that I can not directly speak to at this time, suffice to say that powers much greater than I are at work here.

Cordially,
Bruce J. Howes W1UJR

I'm also a member of the NAWCC (National Association of Watch & Clock Collectors), and we went through something similar a few years ago. The Board of Directors hijacked the club, spent a million dollars on a museum in the middle of nowhere, Pennsylvania, and shut down the members' email list when people started to complain.

I set up an independent list (for members only), we protested and questioned every expenditure and action by the Board, and eventually got some members elected and turned things around. We still have a very expensive museum, but at least the Board is now more accountable to the membership.

Keep this list away from the official AWA infrastructure!

Like others before me, this will be my last posting regarding this unsettling matter.

From Lou:

"Old lions and VE3AWA

Ron is using the ploy of avoiding the mention of the causes of another's reaction. My being their focus, the old lions behaved badly on and beyond the Reflector. In reaction to this, I twisted their tails with the ridiculous and they are now playing the injured innocents. These are, I assume, ex-military and Grey Beards...absurd.

I will not ask for or give an apology. The first, if given, would be insincere. The second conjures the spectre of reinstatement in the Group and with that, a reintroduction to my hobby of its underlying sorry mean-spiritedness.

Kicking North Carolina dust from my heels, CU Cundall DX.

73, Lou VE3AWA "

****

As I newcomer to the reflector, I understand that in actuality, it has no direct relation to the AWA but is simply run by Ron, as a service to the community. It is his reflector and, as such, he is free to do as he wishes. The fact that so many of the list members are AWA members leads some, I believe, to think that it is an AWA reflector and that being critical of the list, is being critical of the AWA. This is not the case.

I feel badly for all parties involved, but especially for Lou, whose voice had been suddenly silenced, with no chance to state his case. As Ron mentioned, his banishment from the list had nothing to do with his 'e-Bay alerts', as Lou himself stated that he would no longer be continuing. Although he received many 'keep the postings coming' comments, he was upset that a few of his friends might also be upset if the postings continued. If Lou is guilty of anything, it is surely nothing more than a mischievous sense of humor, reflected in his off-list e mail to Ron and his other friends. I have seen the e-mail in question and it is far from "disgusting" in my opinion. As Bruce stated earlier, I also fail to understand why any 'off-list' banter should be grounds for list-banishment. Those that know Lou, know that he is an honorable man and a truly gentle man, with a very large and generous heart when it comes to helping others. As such, his loss to the list is a loss to us all.

Surely this can still be set right.

It is sad that a well meaning contributor to this group has been booted off, and most (out of 400) everyone else just seems to go on as if nothing happened. Acquiescing like the people of Germany while the Jews were marched through the gas chambers. Maybe some of those Germans can claim ignorance, can we? It reminds me of a story my father told me a long time ago while I was still a kid in Hungary, and, we are Catholic. It goes like this. - An immigrant from eastern Europe now living in America is working in his back yard alongside his neighbor. They start talking, and the subject of happiness comes up. The immigrant ask the American -well, what do you think happiness is - he goes, Oh, that is easy, I go to work every day, I come home to my lovely wife and a great dinner and my wonderful kids, then I get to work outside in my garden - that to me is happiness. The immigrant goes no, that is not happiness, happiness is when in the middle of the night when you hear a knock on your door. You look out the window and see a bunch of soldiers with guns in black uniforms. When you answer the door the leader of the group asks you if your name is Mr. Smith, and, you are honestly able to say no it is not, - that my friend is happiness. So, is that were we are heading. One of our group is gone. Are we all happy? I have received extremely harsh and nasty emails from both John and Ron in the past, and yet to have shared them with anyone. I do not mind the abuse as I consider the source. Regardless, are we headed the way of total censorship and being afraid to speak our minds because of self made "gods" and are afraid of the consequences? Not that it is relevant, but, I started collecting in the mid 1960's. Did not join AWA till 1975 after I met Bruce at a Dayton Hamvention. BTW , I also met Jim Fisk at that same meet. Prior to that I was an active member of the IHRS. It seems also that everyone recently said their last word on the subject, but, they had to have the last word. Maybe I am doing the same thing. You decide, and you do something.

On Ron's behalf, I know nothing about running a list and the responsibilities that may go along with it. All I know is that I also belong to several military radio reflectors where the membership is about 10 times what it is here, worldwide, yet, there is no censorship at all. In fact, the moderator often comes in, when someone may have a complaint and lets them know that they can leave, but, the list is an open forum.

Collecting is a hobby to be shared. There is no room for jealousy. I still miss my best mentors in the hobby, Charlie Hinkle, Don Dean and sadly a tormented soul, Warren Johnson. We all rejoiced when the other found something neat or worthy. I still remember going nuts over my AK-35 found in the late 60's, and my first spherical audion found in 1976 at a regular flea market in Sarasota, FL. Let's get that feeling back.

Well Roy, as stated before, you are welcome to visit any time and I am sure you will be able to enhance your collection. I am attempting to force myself to stay up late here so I can get used to the CA time, since my NJ time always gets me up at 5:30 AM and I never used an alarm clock in my life. Too bad 10,000 pounds of salvageable radio items had to go into the dumpster because of a negative comment by John Dilks on the NJARC reflector. I about cried as one of my sons and his friends just threw the stuff in. I had to go inside as I could not watch it. I would have gladly given the stuff away for free rather than see what had to happen to it. The fee for the dumpster was $600 (that is because the guy who owned the dumpster was a friend and I had it for 3 months), otherwise it would have been more. it is impossible to estimate what the value, monetary or otherwise would have been to a collector. Fortunately, some local collectors did not listen to John, and came over regardless and left happy. Too bad that a few egotistical collectors have such great influence over what I may call the “uninformed” collectors whom obviously would have benefited, and, still can.

Reminds me of an old proverb –

“If he knows not, and knows not that he knows not, shun him.
If he knows not, and knows that he knows not, teach him.
If he knows, and knows not that he knows, wake him.
If he knows, and knows that he knows, follow him.”

73 – Mike

Mike
Certainly a tongue and cheek jab at the seriousness of The Ebay Posting affair. I am a pure military collector myself and while I think these Catalin radios are sharp looking , they are not my style. My post was a way of putting a sheet over my head and saying boo

Well Roy, we all have different collecting interests, and I for one, never

had any interest in Catalins. That of course does not mean that I did not

enjoy seeing the listing you posted. In fact, it is interesting that a Catalin goes for as much money as a below average Marconi from the 10's. Of course, it will be interesting to see if he gets any nibbles. I am trying to adjust to the time change, and, for a 65 year old guy it is tough, HI. 73 - Mike

Mike,

I agree.

Lou apparently said something "off list " that was offensive to a member and the "list owner" and now until he apologizes he can't play in the sandbox anymore. We all loose out.

I would more often then not hit the delete button on his ebay posts and would have been just as happy to not see them. But it was not a big deal either way. There are many posts I delete without reading on a number of lists since it is apparent they are not of interest. I used to think that Lou was shilling his own stuff which I would find objectionable but when it became apparent that he was simply taking the time to share interesting finds I appreciated his efforts

I have no idea what he said but an off list comment should be treated as such. If he brought the comment in to the public domain then perhaps he should be warned and then shut off if he continued.

I don't know what Lou said but I would urge Ron to reconsider his position and let Lou back. He added to the list. Squeezing an apology out of him because you can via the list banishment is not getting anything meaningful. Let time heal the issue and move on.

We all have tempers and foibles, Lou added a lot to the list- I'd like to see him back and get back to discussing radios

Subject: RE: [AWA] VE3AWA Gone

It is sad that a well meaning contributor to this group has been booted off, and most (out of 400) everyone else just seems to go on as if nothing happened. Acquiescing like the people of Germany while the Jews were marched through the gas chambers. Maybe some of those Germans can claim ignorance, can we? It reminds me of a story my father told me a long time ago while I was still a kid in Hungary, and, we are Catholic. It goes like this. - An immigrant from eastern Europe now living in America is working in his back yard alongside his neighbor. They start talking, and the subject of happiness comes up. The immigrant ask the American -well, what do you think happiness is - he goes, Oh, that is easy, I go to work every day, I come home to my lovely wife and a great dinner and my wonderful kids, then I get to work outside in my garden - that to me is happiness. The immigrant goes no, that is not happiness, happiness is when in the middle of the night when you hear a knock on your door. You look out the window and see a bunch of soldiers with guns in black uniforms. When you answer the door the leader of the group asks you if your name is Mr. Smith, and, you are honestly able to

say no it is not, - that my friend is happiness. So, is that were we are heading. One of our group is gone. Are we all happy? I have received extremely harsh and nasty emails from both John and Ron in the past, and yet to have shared them with anyone. I do not mind the abuse as I consider the source. Regardless, are we headed the way of total censorship and being afraid to speak our minds because of self made "gods" and are afraid of the consequences? Not that it is relevant, but, I started collecting in the mid 1960's. Did not join AWA till 1975 after I met Bruce at a Dayton Hamvention . BTW , I also met Jim Fisk at that same meet. Prior to that I was an active member of the IHRS . It seems also that everyone recently said their last word on the subject, but, they had to have the last word. Maybe I am doing the same thing. You decide, and you do something.

On Ron's behalf, I know nothing about running a list and the responsibilities that may go along with it. All I know is that I also belong to several military radio reflectors where the membership is about 10 times what it is here, worldwide, yet, there is no censorship at all. In fact, the moderator often comes in, when someone may have a complaint and lets them know that they can leave, but, the list is an open forum.

Collecting is a hobby to be shared. There is no room for jealousy. I still miss my best mentors in the hobby, Charlie Hinkle , Don Dean and sadly a tormented soul, Warren Johnson. We all rejoiced when the other found something neat or worthy. I still remember going nuts over my AK-35 found in the late 60's, and my first spherical audion found in 1976 at a regular flea market in Sarasota, FL. Let's get that feeling back.

Yes, that's it. It used to be a small building with a neat little museum, then the Board got delusions of grandeur. It's now a world-class museum with not too many visitors.

Hi,

I am a rare poster, but am cross-posting this to only two groups that might enjoy a bit of entertainment.

"Submarine Alert" a 1943 movie: http://www.archive. org/details/ submarine_ alert

"Nazi spies use a stolen shortwave transmitter prototype to broadcasttop secret shipping info to an offshore Japanese sub. To nab the spyring, the Government has the West Coast's top radio engineers fired andshadowed to see if the Nazis recruit them to complete work on theprototype radio. Radio engineer Lew Deerhold, a resident alien withouta job to pay for his adorable little ward Gina's life-saving operation,falls prey to the spy ring, and is swept up in a maelstrom of deceitand danger."

How does Mr. Deerhold know Morse Code, enough to decode the enemy high-speed CW? And, yes, it is real CW.

How does he convert an intercom loudspeaker into a QRP radio transmitter?

How is that young Johnny just happens to be listening to his Hallicrafter radio, close enough to copy Deerhold's CW message?

Does the clinking of vacuum tubes on his desk sound realistic?

Does Mr. Deerhold's workshop look like yours?

And, finally, does Deerhold find true romance?

This is an "inspirational and patriotic" movie that antique radio aficionados and Ham ops might enjoy. Remember the time frame and take a look at a radio adventure, yesteryear style. It is about 70 minutes long.

My apologies to those who consider this OT, but you might enjoy this too! Please do not nail me or each other for what is considered patriotic etc. This is intended as a fun posting.

73,

ERIC

10119. RE: [AWA] OT: Old Movie - antique radio, QRP. A review

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-02-05 16:34:15 UTC
From: Roy Wildermuth
Topic: 10095 Message: 10119

Well fellow thrill seekers,
I have watched "Submarine Alert" and offer the following review:

Submarine Alert (2 Stars) 1943

Uncle Lou (Deerhold) loses his job as a qualified radio engineer
and then meets the comely Ann Patterson. Meanwhile the niece, Tina, who's
undisclosed illness causes her to speak like an alcoholic, needs an operation
obstensively to cure her peculiar illness. It turns out the hapless Uncle Lou
has been fired from his job in order to aid the FBI in a search for a miniaturized radio
transmitter.
Uncle Lou, whose national origin appears to be German, feels his termination has
been a result of his alien status. Cruelly, the FBI does not tell Deerhold that
he is being used as bait as a qualified radio engineer to aid the Germans.
Deerhold, meanwhile, is financially distressed due to the lack of health
Insurance in 1943 and his unemployment.

As a result of his unemployment, Uncle Lou is approached by
German Agents who are operating the illegal Radio transmitter advising Third Reich
submarines of where to pounce on ill prepared American Shipping. Deerhold is
then employed by the fifth columnists to maintain the offending radio sender,
disguised a medical diathermy machine. The original inventor of this radio
marvel was gruesomely murdered in the first scene in a farming mishap, and thus
Lou is needed to maintain it.

It turns out Ann, come par amour, is a government agent investigating
Deerhold (Uncle Lou). However, as Ann becomes more par amour and less FBI special
agent, Deerhold quickly discovers Ms. Patterson's true motives and dismisses
her from his life. I might add that during the course of the movie, the FBI
regularly violates civil rights, participates in illegal search and seizure and
violently intrudes into citizen's lives. All in the name of Nazional Sekurity. In one
particularly
disturbing scene, the helpless and now hospitalized Tina is used as a pawn to capture the
fugitive Lou Deerhold. Now as a seemingly full fledged participant in this enemy effort,
Deerhold renegotiates his employment with the Nazis' at gunpoint, suddenly
trading his upscale educated demeanor for that of a 1930's gangster. At this
point the Empire of the Sun raises it's ugly head in a brief cameo
appearance as Japanese agents brutally torture a shipping executive to death. Deerhold
then proves that he is indeed
a good American and begins to aid the FBI and his adopted country.

Interestingly enough, the saboteurs have some type of encryption
device for sending CW., and Deerhold, who appears to be able to copy CW,
interprets the message meant for the prowling submarine. Reestablishing a
connection with Ann, he persuades her to take him to her boss at the FBI. It turns out
that the shipping

executive is in fact quite alive and is in fact Ann’s boss, Bambridge. However, the shipping executive is not as he seems. Bambridge is indeed dead and the ersatz Bambridge is a
member of the saboteur group. Bambridge cleverly locks Ann and Lou in a steam room and leaves them to face death by par boiling. The clever Lou fabricates a CW Spark transmitter out of a furnace transformer and sends out a distress call. Fortunately a youthful Ham Radio operator intercepts the SOS message from Lou and Ann just as the pair begin to succumb to the ever-hotter steam. An unbelieving father and a frantic young boy contact the FBI with the information. Based upon this information, The FBI dispatches what appear to be Spitfires to search for the Nazi Submarine as it lurks in near shore American waters. The enemy submariners meet a predictable end as sub is sighted and sub is sunk.

Lou Deerhold is subsequently awarded American Citizenship while a recovered Tina and benignly smiling Ann look on.

Don’t miss this one, if you can, folks.

10120. 1929 and 1930 Stations

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-02-05 16:49:58 UTC
From: W0VLZ
Topic: 10120 Message: 10120

Lots of times questions get asked about what sort of rig to put on the air as a 1929 station. What were hams really using? Do the back page ads in QST really reflect what was on the air?

I found Bruce Kelley's comments on 1929 equipment in the May 1994 issue. After looking at 60 QSL cards from 1929 and 1930 he concluded that Hartley oscillators and the 210 dominated the transmitter scene and almost 90% of the receivers had no RF stage. I've added to Bruce's QSL card data and posted the summary in my blog at http://w0vlz.blogspot.com/2010/02/1929-and-1930-stations.html .

Anybody have additional 1929 and 1930 QSL card data? I can add it in also.

73, Niel

I have an undated filled out eyeball qsl card from my uncle W2ABI sk. His transmitter was "PA 203A CW XTAL 3610 KC FONE XTAL 3997 KC" and the receiver was a COMMET PRO. His comments in script are "Sure glad to welcome ur QSO at any time, either over the ether waves or in person." He died while I was at boot camp in 1965 and by the time I got home my aunt had given away all of his gear. His transmitters were always home brew but he had a newer National receiver.

Well fellow thrill seekers,

I have watched "Submarine Alert" and offer the following review:

Submarine Alert (2 Stars) 1943

Uncle Lou (Deerhold) loses his job as a qualified radio engineer

and then meets the comely Ann Patterson. Meanwhile the niece, Tina, who’s

undisclosed illness causes her to speak like an alcoholic, needs an operation

obstensively to cure her peculiar illness. It turns out the hapless Uncle Lou

has been fired from his job in order to aid the FBI in a search for a miniaturized radio transmitter.

Uncle Lou, whose national origin appears to be German, feels his termination has

been a result of his alien status. Cruelly, the FBI does not tell Deerhold that

he is being used as bait as a qualified radio engineer to aid the Germans.

Deerhold, meanwhile, is financially distressed due to the lack of health

Insurance in 1943 and his unemployment.

As a result of his unemployment, Uncle Lou is approached by

German Agents who are operating the illegal Radio transmitter advising Third Reich

submarines of where to pounce on ill prepared American Shipping. Deerhold is

then employed by the fifth columnists to maintain the offending radio sender,

disguised a medical diathermy machine. The original inventor of this radio

marvel was gruesomely murdered in the first scene in a farming mishap, and thus

Lou is needed to maintain it.

It turns out Ann, come par amour, is a government agent investigating

Deerhold (Uncle Lou). However, as Ann becomes more par amour and less FBI special

agent, Deerhold quickly discovers Ms. Patterson’s true motives and dismisses

her from his life. I might add that during the course of the movie, the FBI

regularly violates civil rights, participates in illegal search and seizure and

violently intrudes into citizen’s lives. All in the name of Nazional Sekurity. In one particularly

disturbing scene, the helpless and now hospitalized Tina is used as a pawn to capture the fugitive Lou Deerhold. Now as a seemingly full fledged participant in this enemy effort, Deerhold renegotiates his employment with the Nazis’ at gunpoint, suddenly

trading his upscale educated demeanor for that of a 1930’s gangster. At this

point the Empire of the Sun raises it’s ugly head in a brief cameo

appearance as Japanese agents brutally torture a shipping executive to death. Deerhold then proves that he is indeed

a good American and begins to aid the FBI and his adopted country.

Interestingly enough, the saboteurs have some type of encryption

device for sending CW., and Deerhold, who appears to be able to copy CW,

interprets the message meant for the prowling submarine. Reestablishing a

connection with Ann, he persuades her to take him to her boss at the FBI. It turns out that the shipping

executive is in fact quite alive and is in fact Ann’s boss, Bambridge. However,

the shipping executive is not as he seems. Bambridge is indeed dead and the ersatz Bambridge is a

member of the saboteur group. Bambridge cleverly locks Ann and Lou in a steam

room and leaves them to face death by par boiling. The clever Lou fabricates a

CW Spark transmitter out of a furnace transformer and sends out a distress call. Fortunately a youthful Ham Radio operator intercepts the SOS message from Lou and Ann just as the pair begin to succumb to the ever-hotter steam. An unbelieving father and a frantic young boy contact the FBI with the information. Based upon this information, The FBI dispatches what appear to be Spitfires to search for the Nazi Submarine as it lurks in near shore American waters. The enemy submariners meet a predictable end as sub is sighted and sub is sunk.

Lou Deerhold is subsequently awarded American Citizenship while a recovered Tina and benignly smiling Ann look on.

Don’t miss this one, if you can, folks.

Folks,

I'm doing a radio restoration that requires a 22.5 V battery. It is mounted to the OUTSIDE of the radio. I need a late 50's vintage color scheme. I'm thinking of the Eveready Type 412... Same size as a modern rectangular 9 V. battery but with a contact on each end.

What I have in mind has a red case with white stripes... Got a decent looking one available? If so let me know.

Thanks
Robert

Robert,

Have one sitting in front of me on the bench.
Eveready model 412 22 1/2 volts
Red and white battery.

Has the white medalion on the front of battery.
Can bring to Charlotte or mail to you.

Robert

You can build your own by downloading and printing a label. Paste the
label on an old battery or build your own box from cardboard. Here
is the link http://www.crystalradio.net/misc/batteries/index.shtml
I have built several Nr 6 dry cells from old shaving cream cans, after stuffing them with alkaline F cells or D cells. There is a color
label for 22.5 volt batteries.

Thanks Geoff,

I'll take it.... The set is one I hope to show at Charlotte. It just snaps into place so you can bring it with you if you can remember to do so.

I could swear I have one or two around the house but several attempts to find one have come up empty. (I'm thinking I found them in old fold-up reflector photoflash units of the 50's)

I guess I will have to resort to the alternative way to find stuff which is to NOT be looking for something and it just pops up magically.

Thanks to the other poster that mentioned the battery scan site.. I'll give it a look. I've done similar for 20's vintage batteries with convincing results, but a tiny battery like this... Not so sure.

Just came across this message-sorry for delay, Hi! That is a good suggestion to use a known dummy load value of 52 to 72 Ohms to set up the transmitter for initial loading. You have a good starting point with this procedure. Then try to get same loading by going thru antenna tuner if needed for your particular feedline/antenna setup. I use a shortened antenna here with a balanced tuner on open-wire line. The feedpoint resistance is low with the Jones Four Band Phone antenna I use. Much lower than the typical 52-72 Ohm coax or twisted pair fed resonant dipole. More like a mobile antenna setup. 73, DeWitt

Hi Lud,
OK. I remember it from the late 60's at least after I got my Novice ticket and started building and working on revitalizing old gear for a station. It was too expensive to buy-still is, Hi! There was more than one outfit distributing it with some variation in the name. GC comes to mind first then more recently CAIG but I don't know much about them. There were others lesser known. A useful product for more than just carbon volume controls.

Wow, I'm just learning of this!

Well, I guess troubles are all relative.

Lou is my friend. He is a VERY kind and decent gentleman. He has been a great strength to me in my time of trouble here (my wife was very seriously injured in a car crash and only just recently woke from her coma, she still faces much more surgical work to repair the damages).

Lou has been kind enough to phone me and listen to my worries, help me stay strong when in the darkest of my fears I thought my wife would never come out of her coma.

Maybe the disagreement of a few people through a mailing list are considered serious, but in the name of perspective, when you consider how precious and frail life is, and how the one you care about can be taken from you in an instant without you even knowing it, I really hope forgiveness and compassion can become the rule instead of an exception.

The family has started a blog to keep friend and family updated on her progress around the world.

http://yvonneonthemend.blogspot.com/

I encourage you to read it, keep Yvonne in your prayers for a full recovery soon, post your feelings for the family to be comforted by.

The first entries were from January. The collision happened Jan 27 while I was at work and I only learned about this when I came home to an empty house and a ringing phone. Life can change forever in an instant.

There were many sleepless nights for all of us, many tears and many fears.

10146. SARS Antique Radio Swap Meet and Auction 2/20/10 in Roswell, GA

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-02-10 03:36:53 UTC
From: W4RON@carolina.rr.com
Topic: 10146 Message: 10146

The Southeastern Antique Radio Society is conducting their annual Swap Meet and Auction on Saturday, February 20 at 8 AM in Roswell, GA. This is our best event of the year and has grown considerably over the past five years. It's absolutely free to buyers and tables are available for $15 for sellers. We're also conducting a no-cost auction and contest. This year we're especially honored to have Mr. John Jenkins, author of "Where Discovery Sparks Imagination" as our guest speaker. Mr. Jenkins is co-founder of the American Museum of Radio and Electricity in Bellingham, Wa.

Additional details can be found on our web site at
http://www.sarsradio.com/nextswapmeet.htm
or by calling me at 678.591.3619.

We'd be honored to have members of the CC-AWA attend this event. I think everyone will find it well worth the drive.

We're all looking forward to Charlotte as well!

Warmest regards,
Rich Rodgers
President, Southeastern Antique Radio Society

Hi Geo!

I wish your wife all the best, you are a blessing to her, I'm sure.

Yes, life is way too short and fragile. Mine came down with breast cancer three years ago.

We thought we were good to go until last September, when she was operated on for a brain tumor. It was touch and go, but she's recovering. She drove again for the first time today.

I hope your wife makes a complete and speedy recovery.

73's, -Tom

Wow, I'm just learning of this!

Well, I guess troubles are all relative.

Lou is my friend. He is a VERY kind and decent gentleman. He has been a great strength to me in my time of trouble here (my wife was very seriously injured in a car crash and only just recently woke from her coma, she still faces much more surgical work to repair the damages).

Lou has been kind enough to phone me and listen to my worries, help me stay strong when in the darkest of my fears I thought my wife would never come out of her coma.

Maybe the disagreement of a few people through a mailing list are considered serious, but in the name of perspective, when you consider how precious and frail life is, and how the one you care about can be taken from you in an instant without you even knowing it, I really hope forgiveness and compassion can become the rule instead of an exception.

Life is such a precious balance.

My boss was operated on for a saucer-sized tumor on one of his kidneys. And earlier in his life he had an Orange-sized brain tumor too.

I understand your fear too.

Please keep her in your prayers, even though you don't know her.

In England at least they were generally 1000 - 4000 ohms. (wound with 48 or thinner wire.)

10151. RE: [AWA] what was the most common impendance of the horn speaker

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-02-11 23:30:00 UTC
From: Ludwell Sibley
Topic: 10149 Message: 10151

The actual AC impedance would be quite a bit higher than the DC resistance. I believe - having seen measurements somewhere - that the impedance of a "2000-ohm" headset is something like 8000 - 10,000 ohms.

Funny thing: I note that the UX-112A output tube wanted to see a load resistance of 15.5 - 18 K, whereas a UX-171A expected 3.2 - 5.35 K. A UX-220 needed 6.5 to 9.6 K. An "optimum" speaker may become sub-optimum if the output tube is changed, a subtlety that seems to have evaded the speaker makers and the "radio" literature in general.

Ludwell Sibley

10152. Tube Tester Question (TV7D/U)

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-02-13 21:49:20 UTC
From: Donald Chester
Topic: 10152 Message: 10152

My
mutual conductance tester TV7D/U has a gas test function. The way the
manual explains its function is that the tube is set up with a fixed
plate voltage, and when you press the Gas 1 button, a negative bias is
applied to the grid, and you manually use the bias pot to adjust this
voltage until the plate current deflects the meter to the first large
division (10 on the 0-120 scale). Then, while holding down the Gas 1
button, you simultaneously press the Gas 2 button. This inserts
80,000? in series with the grid. If the tube is gassy, it will draw a
small amount of grid current which will cause the bias voltage to
decrease, due to voltage drop in the series resistor. This reduction
in negative bias voltage causes the plate current to increase. The
manual recommends that a tube be discarded as gassy if the plate
current increases by more than 10%, that is to say, if the meter
increases more than one small division.

My question is, what if
the pointer deflects downwards when the Gas 2 button is pressed? I see
it deflect downwards far more often than upwards, and with some tubes that otherwise test
good,
the decrease is several small divisions. If the tube is free of gas,
shouldn't it remain still? Nothing in the manual mentions the
possibility that the plate current might decrease when the resistor is inserted in the grid
circuit.

There
is no such thing as "negative gas" in a tube, but it would seem that if
inserting resistance into the grid circuit causes the plate current to
change in either direction, this could be a problem, since it is very
common to have 80k or more resistance in the grid circuit of a tube
type amplifier, particularly with R-C coupling. What could be the
cause of a decrease in plate current, other than a small contact
potential bias, which should be thoroughly swamped out by the external
fixed bias in this test circuit?

I am aware that sometimes a
triode amplifier that is designed to handle a very low signal level,
such as a microphone pre-amp, may have no cathode resistor, and depends
on contact potential to generate a fraction of a volt negative bias to
operate the tube. But in these circuit, there is usually several
megohms of grid resistance. I always thought of this as a rather flaky
way to generate the operating bias for a tube, but I am not even sure
this has anything to do with the above described phenomenon.

Don, k4kyv

I would like to build a one tube hartley TX for 80 meters. I have an old Philco arch type radio that is way past restoration. I would like to know if the transformer would make an adequate supply to run the TX.
I will likely be using a type 45 tube for the TX.
I am looking for a good design for a first time build with parts i can get.
I just aquired a large collection of old tubes and it even came with a Precision 920 tester.
Thanks and 73

Should work FB, Barry, as long as there's a 2.5V winding to power the 45 filament. I power my '10 Hartley and TNT using PP 45s with a power transformer from an old Kolster broadcast radio.

Thanks for the info.
BTW my wife is NE1F
Our local club has a Kit/homebrew contest coming up and i would love to build a TX. the radio has a 47 in it that uses 2.5. I hope i can salvage enough good parts.

At the risk of wearing out my welcome, I want to try one more time as I had some trouble correctly posting the first time.

I need a usable (curved-glass) dial glass for a RCA911K console. I have restored the set, but need a dial glass to make it presentable. I even have the scarce remote control with umbilical cord for this set. A photo of a 911K is attached.

Please look through your parts stuff and help me out if you can.
Thanks...Ted

Southern Appalachian Radio Museum

This is a small but growing museum located at Asheville/Buncombe Technical College in Asheville, NC, my old home town. It is presently in a classroom at the college and they desperately need more space. They have a station set up under the call sign W4AFM which belonged to Bill Hayes. Bill was an old time ham and an elmer to many in the Asheville. He was an old railroad telegrapher and quite a CW operator. He was one of those folks who could read the paper, talk on the phone and to shack visitors, polish off an 807 while copying 35WPM in his head. At the end, he could give a verbatim readout of what he copied!

The museum has rather limited operating hours, but there are several members who can be contacted for tours at odd times, making it fairly flexible for out of town visitors. The museum is free but donations are in order. They are always on the lookout for estate equipment donations, too.

You can learn more from their website:

http://www.saradiomuseum.org (http://www.saradiomuseum.org)

73,

John, W4AWM

Life is indeed tenuous at times. I am just "back in the saddle" after emergency gall bladder surgery on the 6th (one too many chile rellenos at my favorite restaurant, I guess.....) It is good to be back on this side of the line.

I don't know Lou personally, but his work continues to serve as an inspiration of me out in the shack.

Peace, Health, and good DX to you all!

Glad you're on the mend, Jim. I'm also a big chile relleno fan, but limit myself to a couple per year. (I am also obsessed with getting my daily exercise.)

10162. New Antique Wireless Group - You're Invited!

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-02-17 16:57:09 UTC
From: w1ujr
Topic: 10162 Message: 10162

I wanted to let you fellows, and ladies, know of an exciting group which has recently formed on Yahoo. The AWAGroup is a collection of early radio enthusiast who are focused on celebrating the history, building, and restoration of radio gear from the era 1920-1941 in a supportive way that both encourages and nurtures newcomers. Many of us belong to the Antique Wireless Association, the premier organization dedicated to preserving early radio history, but this group is not currently endorsed by the Antique Wireless Association, Inc.

While our focus is on gear from the 1920s to the 1940s, the group is open to all, you do not need to be a ham to join, just have an interest in early radio equipment. Discussions of AWA politics or contentious issues are not allowed. The group as a whole affirms and supports the founding goals of the AWA, but believes these topics are best addressed directly to AWA board members. The goal of the group is to be friendly and welcoming to all. Moderate moderation is assured by the presence of three moderators to prevent this association from becoming the private fiefdom of any one individual. Please stop over and say hello.

I would rather put up with the occasional contention that occurs than to have to belong to multiple groups to get the same information. As it is now there is a lot of crossover with radio related groups. Why are you adding to the mix? What does your new group offer that this group doesn't offer? How will the "endorsement of the Antique Wireless Association, Inc." enhance what is already in place? Inquiring minds want to know.

Dear Tom,

Bruce's writing is so unintentionally ambiguous on several points, it is no wonder that you might be a little confused. I think you are incorrectly inferring that Bruce's Group is endorsed by the AWA. But when Bruce wrote that, "...this group is not currently endorsed by the Antique Wireless Association, Inc" I think he was referring to HIS proposed group, not THIS group we are currently participating on (also not AWA endorsed of course).

His invention of the phrase, "Moderate moderation..." (by moderators, no less) is equally confusing. I guess he means that while he insists on moderation (to preserve the good name of AWA and to keep the bums out), he wants to reassure everyone that his moderation will be done with moderation (because he just wants to protect the good name of AWA and keep the bums out).

(I wonder who the other two moderators are that Bruce will be employing, his dog and cat, or just two of his closest buds? Well, I guess he showed Ron Lawrence and his ugly un-moderated private fiefdom! Of course, how a moderated group where you are restrained from bringing up those horrible post-1941 radios or mentioning AWA politics or issues is anything less than a fiefdom is beyond me. Somehow I'm pretty sure his little dictatorship will be a benevolent one though, as he attests its goal is to be "friendly." And if you get out of line, I'm sure you will be terminated without prejudice. Or maybe with just a little prejudice.)

I'm staying put right here, where I can discuss pre-1920 and post-1941 gear if I have a mind. And where the group will forgive me if I have an opinion about the latest management decision at AWA, now and then.

Kind regards,
Paul Farmer, K3YFQ

P.S. Oh, and if you have a problem with AWA management, just email an AWA Director. That's a proven approach to getting ill-conceived decisions reversed. (Well at least it doesn't get other members riled up.)

Yes, when I read the original invitation I was on the fence regarding what group "this" referred to so I thought I'd throw out my line and see what I catch. In all sincerity I meant what I said in that I would prefer to deal with the occasional contention that comes up. Too often I receive duplicate and sometimes triplicate messages from similar boards. I know that all that I have to do is delete those duplicates or unsubscribe but I thought I'd take the opportunity to offer my opinion before a new list gets started and adds to the email clutter. Possibly a lot of us would join so we don't miss anything. I suspect some posters will post to the new group and this group at the same time to cover all of the bases, again adding to email clutter. KISS-keep it simple s.....

10168. Finding The New Antique Wireless Group

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-02-17 20:29:06 UTC
From: Bruce W1UJR
Topic: 10168 Message: 10168

Hello all,

Several have asked how to find the new Antique Wireless group.

There are two ways to do so:

1) You can access it via Yahoo Groups, just go to www.yahoo.com and search for "AWAGroup".

2) You can also use this link here -->> http://groups.yahoo.com/group/AWAGroup/

Just submit a membership request, and one of the moderators will get
you right into the group!

Much up there already, many of the fellows have posted photos of
their rigs, vintage QSL cards, ham shacks, etc. in the photo gallery.

Thanks for your interest, and have a great day!

Cordially,
Bruce J. Howes W1UJR

When I read that you can't complain about the AWA and contentious issues can't be discussed it sure smacks of censorship to me. Count me out, even if we do hit the AWA from time to time they appear to need a reality check and they darn sure could participate. So if I get it right I can't complain about the AWA and of course they won't join in on this group either.

Count me out, the other group works for me. I don't see where we need to decentralize and splinter. I think this is a mistake, but good luck. See you on the W4RON reflector too.

This reminds me of what happened to the local repeater club 20 years ago. The result has been 15 repeaters that get little or no use and almost no club members. Sad to see it happening.

10177. Pushing The Reset Button

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-02-18 14:48:18 UTC
From: Bruce W1UJR
Topic: 10177 Message: 10177

Hey guys, can we push the proverbial reset button?
I was more than a little out of line yesterday with my invitation to the new AWAGroup.
Rather than focusing on what is good with the old and new groups, I allowed frustration with some past matters creep into my invite,
and I can see it was all too easy to construe that as a personal attack.

The purpose of the new group is not to take away from anything here, but rather to provide a forum for
topics and postings which may not be of primary interest or value to all members of this group.
I'm keeping my subscription to both email groups (reflectors) open as I'll get a more diverse mix of information.
With the Yahoo "Daily Digest" feature, its easy to have posting automatically "packaged" so one
is not overwhelmed with individual emails. Please accept my apology, on behalf of myself and the others of the
group, and let's move forward and talk about radio!

So, let's try this again!
I wanted to let you fellows, and ladies, know of an exciting group which has recently formed on Yahoo.
The AWAGroup is a collection of early radio enthusiast who are focused on celebrating the history, building,
and restoration of radio gear from the era 1920-1941 in a supportive way that both encourages and nurtures newcomers.
Many of us belong to the Antique Wireless Association, the premier organization dedicated to radio history,
but this group is not currently endorsed by the Antique Wireless Association, Inc., instead we are a group of
enthusiasts who enjoy sharing our mutual interests.

While our focus is on gear from the 1920s to the 1940s, the group is open to all, you do not need to be a ham to join, just have an interest in early
radio equipment. The group as a whole affirms and supports the founding goals of the AWA.
The goal of the group is to be friendly and welcoming to
all interested in the restoration, and operation of early wireless gear. Please stop over and say hello.

Cordially,
Bruce W1UJR

10178. Re:MORE items added to Ernie Hite estate auction

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-02-18 16:56:10 UTC
From: Wade
Topic: 10169 Message: 10178

Hi

Seeing the Hite collection reminded me of a radio I saw in the early 40's. It looked a bit like the AK 10 console in the Hite pics. The most notable feature was a single knob tuning system employing linear variable condensers connected by links. By linear I mean the condenser plates slid together or apart to vary capacitance - it definitely was not rotary. Tubes looked like 201's - I don't remember the count. Does anyone have any idea what brand/model/year this radio may have been?

All you got to do is be here. We don't have to staff to handle
it any other way.
There are people coming from as far away as Australia and Sweden.
The US west coast is practically in the neighborhood compared
to that...

Hope to see you here.

Thanks Ron. Of course I'd love to attend, but that isn't possible for
me for a number of reasons, not the least of which are the cost of
travel expenses and loss of time spent traveling.

I was hoping someone who is going to attend the auction might
volunteer to act as my proxy. Of course I wouldn't expect him to do
that without appropriate compensation. Just a thought...

10184. Interesting Set - Can You Help ID?

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-02-19 15:24:09 UTC
From: Bruce W1UJR
Topic: 10184 Message: 10184

Hello all,

I picked up this set at the radio meet last Sunday in Boston...along with a wicked sinus cold.
Suspect its a reproduction, but looking for info.

Photos are up at http://gallery.me.com/brucehowes#100497

Clearly its a regen receiver, but that's about all I know.
I did see this very same set at last years radio meet, its been
kicking around for a while.

The front panel is metal, appears to be aluminum, and the
chassis is a stained and varnished wooden breadboard.

Front of the front panel is labeled as "Doerle TWO~ER".
Below this, about 2/3 of the way down the panel, is a label which read "CHI-RAD".

It also has a sticker on the rear of the front panel listing:
Chicago Radio Corporation
415 S. Dearborn St., Dept. S-43
Chicago, III.

There is another label near of the bottom on the back of the front panel,
but can not be read, appears to have been partially removed, or perhaps
the adhesive has come loose.

The set uses, or currently has installed, a pair of Westinghouse 230 tubes,
one of which has a test label dated 1931.

The wooden breadboard is interesting, has labels on the wood, appear
to be painted or decal, listing connection points.

The feedthrough bushings, where the wire go from the top of the chassis to the bottom
are hollow metal material, flared on the ends for retention.

Tube sockets are marked "Pacent" and seem to have some sort of
adjustment mechanism?

The bus wire is square in cross section.

I am thinking that this was some sort of kit offered by Chicago Radio, but
don't know the vintage. Of course, it might be a very well built repro unit.

Cordially,
Bruce J. Howes

Bruce,
Very nice looking little set.

Observations:

1. Notice the company address has no zip code or pre-zip number.

2. All parts are period early '30s. Pacent made an assortment of radio parts in the '20s & '30s.
The globe #30s are hard to find.

3. Wiring looks period.

4. The only thing that makes it seem a repro is the excellent condition. It may be a well preserved set.

5. Walter C. Doerle had many designs like the "Twinplex" that was kitted by varios companies in the
early to mid '30s. Look through any Shortwave Craft mag in that period and you more then likey
will find an article or two by him and advertisments for kits of his design.

I'm betting its'an orgianl.
What I want to know is how much did you have to pay for it!

John

I agree with John's observations. When I first just saw it from the front, from your previous post on the meet where you bought it, I thought a repro or nicely made Doerle set of modern construction. Looking at the rest of your photos just posted, I am pretty much convinced that it is indeed original and like John said - extremely well preserved. Must admit, I have never seen another. So, congratulations on a great find. In my opinion, regardless of what you paid for it, you got a bargain. Have you had it playing yet? - 73 - Mike

10188. AWA AM QSO Party This Weekend!

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-02-19 17:14:32 UTC
From: Larry Szendrei
Topic: 10188 Message: 10188

Hello all,

I would like to notify/remind everyone that this weekend, 2/20 - 2/21, will be the 2010 AM QSO Party "sponsored" by the Antique Wireless Association.

It will run from 6PM EST Sat. through 6PM EST Sunday (2300Z Sat. thru 2300Z Sun) on 75, 40, and 20M.

More details, and a link to the logsheet, are here:

http://www.antiquewireless.org/pdf/amqso2010.pdf

and here:

http://www.antiquewireless.org/hamevents2010.htm

Note logging requirements are minimal!

Hope to hear a lot of participation, and to talk to some of you on AM.

73,
-Larry/NE1S

Thanks for the help and info John!

I've got to check the set over better this evening, have been suffering
from a nasty sinus thing since Sunday and haven't ventured out to the
radio workshop.

Hope to get a chance to fire it up this weekend, will report back.
I'm sure hoping those globe 30s are still good!

I can't share the $ amount, but it was $75 less than he wanted next year. :-)

I'm happy either way, its a neat set, and good addition to the collection.

I'll prowl through my old Shortwave Craft issues this weekend, maybe I'll
dig something up.

Cheers.

10192. RE: [AWA] Charlotte conference room reservations

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-02-19 19:38:44 UTC
From: Mike Feher
Topic: 10183 Message: 10192

I just spent almost two weeks in a hotel near San Diego, where the rate per night was $147 without taxes. BTW, that was the Government rate. I had to pay almost $30 a week for a T1 line. A 300K line would have been free, but, would have made it very difficult to remote into my home computer. I have a Verizon air-card that I usually rely on, and it works great at most locations, however, in the room I had, I had poor signal quality, so, decided to pay the fee. While at MCTSSA at Camp Pendleton I had excellent signal from my air-card, sometimes approaching a 10M rate. It is not cheap, about $50/month on top of my cell bill, but, as a business expense, I find it awfully useful and handy. 73 – Mike

Subject: Re: [AWA] Charlotte conference room reservations

Hi Folk s,

I just took Ron's advice and made a reservation at the Sheraton. You know it is a great hotel and I have always stayed there and when
I go to the MAARC Convention (RADIOACTIVITY) in MD I always stay at the Sheraton. I think it is important to support the hotel where the even is held.

Having said that when I made the reservation I asked once again if they had free WiFi (Wireless Internet) and the usual answer came back that they "didn't yet." So I decided to call customker service (800-328-6242) and once again complain. Every year they ask for feedback in an email and I alwasys give the hotel high marks but complain about the lack of what has become a near necessity that is expected. I never hear anything. The Sheraton in Maryland is the same way.

I am currently in San Antonio for a short visit and the other night I stopped in Beau Bridge, LA at a Microtel for $55.00 per night and had great free internet. A little over a week ago we were in Clermont, FL at a Howard Johnson's at $39.95 per night with excellent free internet. The Red Roof across the street from the Charlotte Sheraton has free internet at about half the price of the Sheraton. I can go to McDonald's and have free internet. More and more hotels are offering it. I told customer service that the free internet is now where free television and telephone were years ago.

I say all of this in the hopes that many of my comrades will call the customer service number listed above and express their displeasure with Sheraton for not being as customer orirnted as they could be.

By no means am I suggeswtiong you stay elsewhere, but I did them them I am at the Red Rook in 2011 for the next convention.

Thanks for allowing me to vent !!!

73s,

Joe Koester, W4NSA

See you in March!

Interesting set and workmanship. Check it over-radio diagrams from magazines & kit sets often have/had errors and may not have ever worked. After reading the comments I double checked the pictures for the type/age of hardware used, wiring, and solder joints. Photos are good but can't tell-is the front panel grounded? Reason I ask is i don't see ground connections to the variable capacitor rotors.Specifically, can't tell on the regen control. I do see that the var. cap's stator lugs (2) are used as tie points for connections. They both could work electrically if grounded thru the frames to the front panel but this is not good practice. The tag on the front panel reminds me of a catalog reply card or printed ad from a radio magazine. The use of department references i.e. "Dept. S-43" was a common practice of advertisers and way to tell where the respondent saw the ad. I read it most likely as indicating a date: September 1943 or possibly to a magazine
and year: Short Wave Craft 1943.

I went and looked around here on the net for info on your radio. There sure is a lot on it. There is also a wide variety of styles that radio came in as far as front panel and even one in a Popular Mechanics magazine articel with a crinkle metal cabinet that came in with the kit! You may want to use Google find this article which I had found. It had a very good detailed schematic with some possible mods too. Nice find for I agree with the othes you may have found a very nice 1930's version of the radio. Dave N2TJQ

Hi All.
Over here in the UK we do not have anything above 3.800 on 80. So will not be able to work co-channel.
However I do intend to be on tonight and will use 3.615 - 3.620 which is the AM activity area
over here in England.
I will also be on 14.286 tomorrow looking for AM. I have 100 W RF into a 3 el Steppir so if condx any good I should be able to get across.

Hi Pat G3IKR,
I heard you calling CQ on 3615 Saturday evening. You were S5 & Q5 w/qsb into the Boston area. I gave you a couple of calls but no luck.
I will be on 20M Sunday. What time will you be on? I'll point the beam NE and give a listen.

I heard lots of AMers on 75, none on 40.

Worked KN4BI in GA, REALLY hard to hear with all the sidebanders

on in the early evening.

If there are any night owls still up I'll plan to be on

after midnight. Hopefully most of the slop buckets will

be in bed by then.

Hi Ron & group,

I spent my time last night on 75M, working several stations over the period of about 3 hours. My 4th contact will certainly be my most memorable - Pat G3IKR and I were able to have a good, solid QSO on 3615 Kc/s. Great to finally hear the voice behind the keyboard. Other notables I talked to include W2AN with Dave KA2J at the mike, listmember and friend Jerry W1ZB, a couple of Florida stations (nearly DX for Maine on 75M), and YL Kerri, KC2UFU, was in the round table with us for a long time, beyond the time I left the frequency to snag W2AN, my last contact before I stoked up the coal stove for the evening and went to bed.

Unfortunately I did not run into W1HRX; perhaps our paths will cross today.

40M should be better today - on the east coast 10:00AM - 2:00PM seems to be best. I worked a lot of stations on 40M 2 weeks ago in the AM Transmitter Rally.

I also will be on 20M. Pat said to look for him on 14.286, which is always the center for 20M AM activity, around 1200Z.

73,
-Larry/NE1S

Just talked to Pat G3IKR again on 20M (14.286). He's there right now if any of you want to try to work him.

Conditions were rough here. My tribander is frozen pointing towards the southwest, so northern Europe is kind of off the side. Also, I had to use the Breting 9 (which is broad as a barn door), becasue my R390/URR developed a problem last weekend, so it's on the bench receiving TLC instead of stations. But we made it!

Great talking to you again, Pat!

Great fun to dustoff Novice rig setup Hallicrafters HT-40, Heathkit HG-10 VFO, Allied Receiver, Dow coax relay, and operate it in AM mode. Worked AWA W2AN, W1HRX, and several other AWA AM QSO Party stations. Hope my 15W of carrier on 80M didn't damage to many receivers, Hi! Too bad I don't have the space to keep this gear in place and not just bring it out for these special occasions.

I am getting ready to build up a Hartley and the circuit that i have picked needs some mica caps. Is there a source of the old caps?
i need .002 uF, .005uF and .00025uF. I also would like to find some DSC or DCC wire for coils.
Thanks
Barry

It was a pleasure to work you with the W2AN Millen transmitter, George. Your HT-40 sounded great, and I would not have known you were using screen modulation unless you told me! 73, and hope to catch you in the next AM contest.

Hi Barry,

Congrats on your Hartley project. I have picked up some Sangamo micas and some of the wire (ask about the wire) from Play Things of Past. Gary has a humongous inventory of vintage stuff (just a satisfied customer). Also eBay might be a good place to keep an eye out. Good luck on the project and hope to work you during the next '29 QSO party.

Hey guys,

I am looking for info on Shell Electronics MFG Corp of Westbury, NY. There is next to nothing on them via the Web. I am especially interested in any manuals and brochures on their tube audio equipment. They were active in audio around 1960. They also made Test-O-Matic tube testers. Also, anyone have any Shell audio gear?

Thanks in advance for any responses.

Regards to all,

I can see why you're mystified. The only Shell device in the Photofacts is a diagram (only) for the Shell CB-1200 tube-type CB transceiver of about 1963, operated from 117 VAC or 6 or 12 VDC. And they're too "modern" to be in Rider's.

They may have done private-brand manufacturing but that's essentially untraceable.

10221. RE: [AWA] ISO Shell Electronics MFG Corp Info

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-02-26 18:49:28 UTC
From: Paul R. Farmer
Topic: 10214 Message: 10221

Got it, Lud. I did have one response so far from the MAARC Listserve about the CB unit from the early 60's that he remembered buying new in a product closeout deal but no remembered Model number.

I am hoping to reconstruct some idea of the company's history and audio product line. If I am even marginally successful, there will be an article and some contest entries from the effort.

Thanks,
Paul

I can see why you're mystified. The only Shell device in the Photofacts is

a diagram (only) for the Shell CB-1200 tube-type CB transceiver of about

1963, operated from 117 VAC or 6 or 12 VDC. And they're too "modern" to be

in Rider's.

They may have done private-brand manufacturing but that's essentially

untraceable.

Subject: [AWA] ISO Shell Electronics MFG Corp Info

Hey guys,

I am looking for info on Shell Electronics MFG Corp of Westbury, NY. There

is next to nothing on them via the Web. I am especially interested in any

manuals and brochures on their tube audio equipment. They were active in audio around 1960. They also made Test-O-Matic tube testers. Also, anyone have any Shell audio gear?

Thanks in advance for any responses.

Regards to all,

Paul Farmer, K3YFQ

Hi Gang,

Last weekend we had BBQ sandwiches two times here in NJ. My son made the BBQ and it was so good, any of you southern boys would think it was local food. The only thing missing was the red slaw - we substituted some local slaw from the deli.

Ron, you better have a list of the good BBQ places near the HQ hotel, 'cause I'm a fixing to fill up while I'm there.

From: Joseph W. Koester
Topic: 10243 Message: 10243

Folks:

I picked up a nice cabinet for a 1937 Zenith 6S128. I have a chassis for it, but I am lacking both a speaker and a speaker board.

This is one of the big tombstones that uses a console chassis and it is distinguished by some small wooden balls imbedded in the lower part of the speaker grill.

I would like to have the measurements or a tracing of the speaker board or a good description so I can make one for the radio.

If you happen to also have a speaker for this model all the better. The Zenith manual lists an 8-inch speaker (part 49-117) with a 1,000 ohm field.

Appreciate any assistance in helping me get this one together.

Whilst I would agree that not all that is in the article is strictly true, after all it is a "small town
newspaper" and I know nothing of the early experiments nor the French ones, which I guess were kept secret, there is no doubt that what they demonstrated was that reflections from moving aircraft could be obtained and that it could form the basis of an aircraft detection scheme, which is what the British Government were most interested in and consequently put money into the scheme. It was never claimed that those first tests 75 years ago were anything more than a demonstration of the possibilities. To say they could not actually measure height or distance or bearing at the time is to suggest that someone else could. Who?
The reference to IFF is not correct. That came later and was very successful.

10251. Early Breadboard Spark Gap Transmitter/Receiver

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-03-14 15:20:11 UTC
From: Mike Feher
Topic: 10246 Message: 10251

In case some of you may be interested, I recently won an interesting, but, more than likely very early homebrew breadboard spark transmitter/receiver:

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem
<http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=380210094185&ssPageName=STRK:MEWNX:IT> &item=380210094185&ssPageName=STRK:MEWNX:IT

I received it a few days ago. It sure looks home brew, but, has a lot of commercial similarities as well. Now, here is the kicker, on the bottom there is a real old commercially made decal that states "Property of Harold S. Greenwood W6MEA. I expect Greenwood probably placed this decal on all the items in his collection. If you have the original "green" Greenwood book published in 1961, then you can find a picture of this exact breadboard on page 49. If you have the later "orange" edition by McMahon, then you can see it on page 34. It is a nice set no matter what, and definitely early, but, the Greenwood connection makes it ultra special in my eyes. This BTW is the first set of this type that I have seen with a carbon detector. 73 - Mike

This has been on CNN since Friday:

http://www.cnn.com/2010/TECH/03/12/pi.day.math/index.html?hpt=C2

A few interesting items in the article –

Record for calculation: 2.7 trillion digits (by Fabrice Bellard, December 2009)
Record for memorization: 67,890 digits (by Chao Lu, 2005)
How random? There are no occurences of the sequence 123456 in the first million digits of pi

Also – if anyone is interested, they list the first 10,000 digits. Heck, I used to think I was cool in college being able to ramble off the first 25 digits. 73 – Mike

10259. 1938 Zenith 12S245 Chairside

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-03-21 01:49:10 UTC
From: Joseph W. Koester
Topic: 10259 Message: 10259

Hi Folks,

I am restoring and putting together a 1938 Zenith Model 12S245 - this is the large Chairside, sometimes called the "Commander" in honor of the Commander of Zenith fame. It has a larger big brother the 15S245, and it is a cabinet with two covered compartments on the top with lids that are hinged and open. I bought this radio in Houston in 1996 or 1997 and I am just getting the cabinet refinished and put together.

This radio has two speaker openings, one on each side, but according to the schematic has one 12-inch speaker. Each cabinet opening has three curved wooden bars spanning the distance. I have two speaker boards that came with the radio, but I don't know if they are original. They do not fit into the speaker openings, but rather are at the very back of the opening, leaving a space of about a half inch between the grill cloth and the bars. And the inset of the opening is exposed and does not appear to have been finished, leading me to think that perhaps my speaker boards are not original.

I would have thought the speaker board and grill cloth might have touched these three bars, but there is no way I can tell.

Bottom line: This is hard to describe, but does anyone have this radio and can tell me about the speaker board mounting, etc.?

The chassis is restored and the cabinet is starting to look real nice and I would like to get it back the way it should look. I have only seen a couple of these cabinets and would appreciate any advice and or assistance, especially if you have this radio.

Many thanks for any responses.

John,

Bingo! Thank you. That is the picture I was looking for. I believe my speaker boards must be original. The radio in the picture has been refinished, but they neglected to tone it or detail it. The bars are black and the area in front of the speaker board is black, and I assume, so is the area behind the speaker bars to the grille cloth. The edges around the two top lids is either black or dark brown, I'm not sure which.

I really appreciate the picture and the effort!

Regards,

Joe Koester

Joe-
There is one picture on this web page that shows the grille cloth touching the three bars.
http://www.worthpoint.com/worthopedia/zenith-model-12s245-chair-side-radio

Click the picture of the 12S245 and a photo in a box will appear. Wait a second, then "Next" will appear on the right edge of the photo. Click Next until you get to the third photo.

Hope this helps.

From: T David Zimmermann
Topic: 10263 Message: 10263

Hello Radio Aficionados!

I have just purchased a Grand TR-818 Transistor Radio that contained four very leaky mercury AA batteries. Needless to say, the liquid has caused damage to parts of the radio's interior. Knowing that mercury is now considered to be a very dangerous substance, I have two concerns. First of all, should I be taking particular precautions when handling the spillage or its oxides? Secondly, what material would be best for neutralizing deposits of the material? For akaline battery spillage, I use vinegar; for carbon zinc batteries, baking soda..but mercury? Any info you can impart would be helpful. Thanks!

PTL,
Dave Zim'n

10264. Presentation on Don Mix & WNP @ K1USN Braintree, MA

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-03-22 22:47:54 UTC
From: John Dilks, K2TQN
Topic: 10264 Message: 10264

Saturday April 10 at 10 AM.

Hi Gang,

Here's the info I have on my presentation time on Saturday April 10 at 10 AM.

Please RSVP if you can make it. The K1USN group would like to know
how many are coming.

RSVP (click) mailto:pi.k1rv@...

Program - Slide show and Presentation taken from Don Mix's daily
journal - Length, about 1-hour:

WIRELESS NORTH POLE,THE ADVENTURES OF DON MIX
by John Dilks K2TQN

Imagine for a minute you are a young 21 year old ham living in
Connecticut with your parents. You have recently completed your
schooling and are thinking about a career in radio. Self taught, you
are able to build or troubleshoot any radio circuit; you have honed
your Morse skills and are one of the top radio operators around, well
known by your peers. So what are you going to do? It is early winter
1923. You receive an invitation from Hiram Percy Maxim to apply for
the position of radio operator on an expedition in an 88-foot
schooner to the North Pole for one year.

Frozen in the Ice for 12-months, life was hard and exciting for Don the crew.

73, John Dilks, K2TQN

Location info:
The K1USN Clubhouse is located in the Thomas Watson building on 85
Quincy Ave in Braintree, MA. The presentation will take place at 10
AM in the lower level of the building which is handicapped accessible.

We will be conducting a VE session upstairs at 9 AM and expect some
of those people to attend as well as other K1USN members. You
certainly can extend an invitation to AWA members as well as Donna Halper.

The K1USN Clubhouse will be open at 9 AM for visitors who arrive
early and W1QWT plans to be available to discuss the vintage Navy
gear he has restored.

We should be able to handle all the AWA members that wish to attend.
We plan to provide coffee, etc so it would be nice to have a rough
idea on the numbers.

We have a gathering of local hams every Saturday morning at 7 AM at the Holiday Inn on 228 in Rockland, MA. It is located near the Rte 3 exit for Home Depot, Exit 14.

I plan to be at the breakfast and some of us will be going from breakfast directly over to K1USN.

73,

Pi - K1RV / K1USN

10267. Report from Charlotte: and the Future of Vintage Radio Collecting

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-03-27 01:51:17 UTC
From: Paul R. Farmer
Topic: 10267 Message: 10267

The CC-AWA 2010 Charlotte Conference is a bang-up Meet of proportions not seen here for several years or more. While the vending parking lot was not full to capacity like it was 10 years ago, there were significantly more vendor-occupied spaces (146 today, the first morning of selling) than when I was last here in 2007. Why? The death last year of long-time 1920s collecting specialist Ernie Hite, III brought his large (about 375-lot), museum-quality collection to the auction block here last night. Collectors descended from 26 states and five countries to boost prices to respectable levels for the first two hours of the auction. But the auction went on for almost five hours and by the half-way mark, aggressive spectators (250 of them in the auditorium initially) began to flag in their bidding enthusiasm. Many turned in early after a long day (and night) and many others seemed to be decreasingly willing to overspend their bank accounts by larger and larger amounts. By quarter to midnight there were fewer than 25 bidders and observers, with the half-dozen willing to continue in earnest rewarded with premium sets at half to two-thirds their value by any measure we are used to.

And what is revealed about the future of vintage radio collecting? The passing of top-drawer collectors like Ernie, Ed Bell, Larry Babcock can only accelerate in this age of aging collecting stars. As they pass and their collections come to the auction block (Babcock's in a special auction at the Rochester AWA Conference in August I am told) in ever greater numbers, the supply of quality sets will be very much increasing as demand is dropping from the fewer and fewer well-healed collectors remaing. This almost certainly means lower prices down the road even for the rarities and museum pieces ...I think. But who can tell the future even when all the stars appear to be aligned (or rather mis-aligned)?

Another affect of these mega-auctions of quality material is the draining, to some extent, of the drive to spend cash in the flea market on the day after. While the flea market was large today, the buying was less than brisk and by mid-morning venders were hauling their unsold sets in droves to the Meet's second auction (the Main Auction) that kicked off at 1 PM. I had not nearly the stamina (nor the purse) to endure another big auction (especially an inferrior one by comparison) on the heels of the Hite Auction. Many other vendors packed and departed before the sun rose halfway to its zenith.

So there may be radio bargains (or so they seem) in your future. But much like catching the proverbial falling knife, it may be tempting to grab a radio in free-fall but making that catch can end up being a bloody affair (when the value continues to decline).

All for now.

Another day of Charlotte tomorrow, especially the Old Equipment Contest, more vending, and the departure luncheon with Robert Lozier's thoughful and insightful remarks and prspectives on the top entries in each contest category.

Good night all,
Paul Farmer, K3YFQ

P.S. Did I say this has been a great event here in Charlotte? Well, it has been, and I am sure it will likewise continue in a similar vein tomorrow. Cheers for the CC-AWA and their dedicated, tireless volunteers!

The AWA 2010 Convention is on the schedule for August 17th thru August 21, 2010. 4 1/2 days. The Convention for 2010 was kicked off on March 25, in Charlotte at The AWA Carolina's Chapter Radio Conference. Having been Chairman of the National Convention in Rochester, I can appreciate the hard work that went into creating such a beautifully executed event. I can speak for both AWA Deputy Director Bob Hobday and myself that we were impressed by the meet and touched by the warm Hospitality extended to us. I have never been to a Radio Collectors event except for Rochester and I truly had a wonderful time. The Video presentation as shown in Charlotte can be seen on the internet at http://www.youtube.com/watch?v=ex8h-FlIQko&aia=true.

10274. RE: Report from Charlotte: ...Part II

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-03-28 21:43:10 UTC
From: Paul R. Farmer
Topic: 10274 Message: 10274

Hi, all. Here is more of the story:

Preliminary assessment by the CC-AWA primaries indicates that the Ernie Hite Auction grossed probably between $99,000 and $100,000. The entire amount will benefit Ernie's family, especially a college fund for his daughter, apparently. The CC-AWA is foregoing a commission on the sale in order to maximize the amount that will go to the family.

Here are some highlights from the Hite sale:

Lot# Description Price Rmk
28 Sleeper 1-tube, refinish 525
30 Radiola 1, refinish, E+ 950
36 Ezra F Bowman crystal set 1600 w/packet watch, many extras
38 Turney Det. 1-tube 1600
40 Paragon RA-10, E 700 Very nice; went cheaply late in Auct
44 Klitzen Regenerator, refin, E 1000
45 Klitzen (?) Amp, refin, E 900
46 Amrad spark coil, E 950
49 Wireless Specialty IP-501, E 2750
73 Duck loose coupler, refin, E 775
77 Kennedy 281, E+ 900 Sweet
86 Tuska 225, late ver, refin, E+ 500 Sweet and a steal
87 Cutting & Washington 11A, E+ 450 Piano refin, w/3 good BBT o1As
91 Murdock antenna switch, E 190 A good deal
98 NESCO BC-144, w/metal cab, E 3100 Everything right, good transformers 103 N Electric 3-piece 950
109 Cent Sci lab coherer, refin, E 300
112 Marconi Arcon Jr 1-tube, E 850
126 BTH VR3 2-tube, E 175 UK
129 Tungsram 3-tube, VG 500 UK
134 Zenith Royal 7000, VG+ 300 Working well
140 Metrodyne 3-dial, VG 275
143 Penn Wireless SP-2 600
148 Hallicrafters HT-32B, E+ 450 Perfect front, described as Near-Mint
152 DeForest Inter-panel Set 11000
154 Hallicrafters SX-115, E+ 1100 Perfect front, described as Near-Mint
155 TMC GPR-90, VG to E 350 A few bad spots on the front panel
157 Hammarlund SP-600, E+ 500 Perfect front, perfect electronic restoration
AK-12 1100
Zenith 4R 375

As is obvious from this list, many sets were refinished. The refinish work was generally very well accomplished; often retaining the base finishes, cleaning and top-coating with lacquer. This type of refinish work gives a very presentable appearance while retaining an honest appearance of age and (light) use.

This list was prepared from my auction notes and is not to be confused with an official CC-AWA list which I hope will be forthcoming from Ron & Co. Such a list will be useful to us all for assessing valuations down-the-road, whether for other auctions, private transactions, or appraisals.

This auction ran so long that it might have been useful to sell just the radios on Thursday evening and save the paper and tubes for the first couple of hours of the Main (regular) Auction on Friday afternoon. Consignments to the Main Auction could have been restricted somewhat to prevent it from going too long. BTW, most of Ernie's tubes were for display only, having open filaments. I did not record them or the paper.

With regard to the Main Auction on Friday at 1 PM, I have always thought that that was too early to divert shoppers on the first day of flea marketing. On the other hand, flee marketing resumes on Saturday AM, even though much of the excitement and many of the vendors have fled by then. And there is little room to move things around in the packed schedule of a 2-day Meet (Thurs 1 PM to Sat 2 PM) that has as much going on as the CC-AWA Spring Conference.

More in Part III.

Best regards to all,
Paul Farmer, K3YFQ

The CC-AWA 2010 Charlotte
Conference is a bang-up
Meet of proportions not seen here for several years or more.
While the vending parking lot was not full to capacity like it was 10 years ago, there were significantly more vendor-occupied spaces (146 today, the first morning of selling) than when I was last here in 2007. Why? The death last year of long-time 1920s collecting specialist Ernie Hite, III brought his large (about 375-lot), museum-quality collection to the auction block here last night. Collectors descended from 26 states and five countries to boost prices to respectable levels for the first two hours of the auction. But the auction went on for almost five hours and by the half-way mark, aggressive spectators (250 of them in the auditorium initially) began to flag in their bidding enthusiasm. Many turned in early after a long day (and night) and many others seemed to be decreasingly willing to overspend their bank accounts by larger and larger amounts. By quarter to midnight there were fewer than 25 bidders and observers, with the half-dozen willing to continue in earnest rewarded with premium sets at half to two-thirds their value by any measure we are used to.

And what is revealed about the future
of vintage radio collecting? The passing of top-drawer collectors like Ernie, Ed Bell, Larry Babcock can only accelerate in this age of aging collecting stars. As they pass and their collections come to the auction block (Babcock's in a special auction at the Rochester AWA Conference in August I am told) in ever greater numbers, the supply of quality sets will be very much increasing as demand is dropping from the fewer and fewer well-healed collectors remaing. This almost certainly means lower prices down the road even for the rarities and museum pieces ...I think. But who can tell the future even when all the stars appear to be

aligned (or rather mis-aligned)?

Another affect of these
mega-auctions of quality material is the draining, to some extent, of the drive to spend cash in the flea market on the day after. While the flea market was large today, the buying was less than brisk and by mid-morning venders were hauling their unsold sets in droves to the Meet's second auction (the Main Auction) that kicked off at 1 PM. I had not nearly the stamina (nor the purse) to endure another big auction (especially an inferrior one by comparison) on the heels of the Hite Auction. Many other vendors packed and departed before the sun rose halfway to its zenith.

So there may be radio bargains (or so they
seem) in your future. But much like catching the proverbial falling knife, it may be tempting to grab a radio in free-fall but making that catch can end up being a bloody affair (when the value continues to decline).

All for now.

Another day of Charlotte tomorrow,
especially the Old Equipment Contest, more vending, and the departure luncheon with Robert Lozier's thoughful and insightful remarks and prspectives on the top entries in each contest category.

great event here in Charlotte? Well, it has been, and I am sure it will likewise continue in a similar vein tomorrow. Cheers for the CC-AWA and their dedicated, tireless volunteers!

10282. 2010 AWA John Rollins Memorial DX Contest -> April 21-22 & 24-25, 2010

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-03-29 00:02:30 UTC
From: Bruce W1UJR
Topic: 10282 Message: 10282

The 2nd Annual John Rollins Memorial OT DX Contest will take place in April 2010.

Need A Log or Rule Sheet?
I will be sending out log sheets and rules to those who have regularly participated in previous years events.
Soon you will also be able to download the log sheet and rules directly from the AWA website.
If you have not received contest materials by April 10, you may contact me directly, Bruce J. Howes, W1UJR, 312 Murphys Corner Road, Woolwich, ME 04579, or email to w1ujr@....

Background
If this name sounds new to you, it is because this contest was formally known for a number of years as the “Linc Cundell Memorial Contest”.

The AWA had two events named after Linc, one held in January, and this event held in April. With the March 2008 passing of long-time AWA member John Rollins, W1FPZ, it was felt that some permanent acknowledgment of John’s many contributions should be made.
John was well known as an exceptionally generous gentleman, giving away advice, parts, and even complete rigs to those interested in participating in the AWA contests.
Some may not know that John was also an avid DXer, a trait left over from his professional life spent largely overseas.
So the suggestion was made, and approved by the AWA board, to rename the DX contest in memory of John.

A change this year is the scoring related to power levels.
This change will allow stations using higher power rigs to participate in the contest, with the goal of making the event open to more station.
Also keep in mind that all AWA contests are now open to non-AWA members. One no longer needs to be an AWA member to participate in, or even to win the contest.
Tim W1GIG has been working with the good folks at the ARRL to get the word out, so be sure to welcome any and all newcomers to the event, be they AWA members or not.
The winner will be graciously asked to send in a photo of their station, in fact, we’d really like to see photos of all stations, so by all means, send along a photo with your log sheet.
We’ll use the best of these in the contest report, and maybe a show and tell at the AWA Conference’s “Amateur Hour”.
As in previous years, we’ll present the winner of the event with a plaque at the AWA Conference in the fall. So encourage your ham friends to join us in the fun!

This contest, held on 40 and 20 meters, gives the West Coast and DX old-time operators a more favorable chance to participate and accords a higher point earning status to the great rigs and circuits of the 1950s and earlier.
In 2009 OT DX Contest participation was down slightly from previous years, so please continue to encourage your fellow ham friends to join in the fun.

These are low-key affairs, with many of us working at 10 WPM. If we hear you signing or calling AWA, you don't need to worry about your speed, everyone will QRS for you. In the event you don't have old time gear, don't let that put you off, the main thing is to join in the fun!

You will notice the 20-meter contest window is only fifteen kilohertz wide again this year. That should make it a little easier for us to find each other on the band. Remember, use old time tuning methods for AWA contests, that is, tune up or down four or five KHz from your calling frequency to get those rockbound operators.

Rules
Dates and Times: Wed. April 21 @ 2300 GMT to Thu. April 22 @ 2300 GMT and Sat. April 24 @ 2300 GMT to Sun. April 25 @ 2300 GMT

Objective: Contact the greatest number of AWA members. When calling, use AWA AWA AWA DE W1UJR as an example.
Once contact is made, exchange RST, name and year of equipment such as TX 35 for a 1935 transmitter and RX 38 for a 1938 receiver. Send MOD for 1960 or later gear.

Rules: A station will be scored only once on each band. Open to all licensed amateur stations. High scorer will be asked to submit photo of station, however photos from all are appreciated.

Frequencies: 7035-7050 kHz and 14050-14065 kHz, +/- QRM.

Scoring: QSO Zones: E eastern zone, U.S. Districts 1, 2, 3, 4, 8, 9 plus VE1, VE2, VE3; W western zone, U.S. Districts 5, 6, 7, 0 plus VE4, VE5, VE6 & VE7; DX zone, all others. QSO Points per contact per zone: E to E or W to W: 1 point; E to W or W to E: 2 points; E, W, or DX to DX: 3 points.

Equipment multipliers: Mod TX and RX: 1 point; OT TX or RX: 2 points; OT TX and RX: 3 points.

Power multipliers (input to final): 0-24.9 watts: 3 points; 25-100 watts: 2 points; 100+ watts: 1 point. (Please note power changes this year)

Determining total points per QSO:
1) Find the QSO points for the contact.
2) QSO points x your equipment multiplier x your power multiplier = total points for the contact.
Scoring examples: N9CQX contacts WU2D
Both are in the E zone for 1 QSO point.
Both have OT TX and RX for a 3-point multiplier.
Both are operating at 10 watts for a 3-point multiplier.
1 point x 3 x 3 = 9 points for each operator.
K6TQ contacts K1FI
W to E contact for 2 QSO points.
K6TQ using an OT TX and RX with 20 watts.
K1FI using an OT TX and MOD RX with 50 watts.
K6TQ's points: 2 x 2 x 3 = 18 points.
K1FI's points: 2 x 2 x 2 = 8 points.

Awards: Plaques will be given out at the AWA Conference in August.

Logs: As stated above, log sheets will be sent out to previous OT contest participants that are identified as such in the membership rolls.
Please send completed logs and computed score to Bruce J. Howes, W1UJR, 312 Murphys Corner Road, Woolwich,

ME 04579, by May 31st, 2010.

Cordially,
Bruce J. Howes W1UJR

Topic: 10283 Message: 10283

Folks,

I've apparently missfiled this issue of Radio Age... Need scan of Don's article: Rhamstine Needlephone in Radio Age October 1986 pg7

Can you help?

Robert

10284. Report from Charlotte: ...Part III (Final)

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-03-29 02:45:10 UTC
From: Paul R. Farmer
Topic: 10284 Message: 10284

Part III:

Viewing the Hite Auction lots before the auction on Thursday afternoon prevented me from attending every program that was scheduled during that period and also the membership meeting. I will say that John Dilks' presentation on the Don Mix adventure as a radioman for the Arctic expedition was superb. John has access to Mix's diary and photographs from the expedition, and he (John) is planning to write a book on the subject. Such a volume would likely be a huge hit among readers of early 20th Century adventure travel and important scholarly documentation of the expedition. Not to mention the radio aspects of Mix?s experience and the social cultures of the time depicted by the diary and photographs.

Although I purchased very little in the flea market and sold not much either (both new experiences for me at a radio meet), I did witness lots of sets and parts changing hands over two days, mostly low-end sets and parts. Of course there are always transactions in the flea market involving valuable sets that do not rise to common knowledge. I am aware of a significant cash of Dynaco stereo equipment that was sold but because of pre-meet notification of the equipment to a limited few, the transaction occurred so quickly it was beyond my radar initially. (There was a Fisher 500 with no reserve in the Main Auction that I did sit through.) I believe there was a blue and ivory plaskon Setchel-Carlson frog eye set that sold on day 2. Asking price was $450 initially. My high-end Catalin, plaskon, polystyrene, and painted sets of the 40s and 50s were much appreciated by numerous lusting browsers but were not easily moved at prices that were not intended to represent rock-bottom bargains. I might have done better had I spent a lot more time in my booth but what?s the chance of that? Not bloody likely with so much to see and do at a meet like Charlotte?s.

As we have become accustomed to at the Rochester, Maryland, Michigan, and Charlotte meets, the Old Equipment Contest brought out some wonderful equipment that was worth the trip in and of itself. I am hoping this gets represented well on the CC-AWA website because in my usual rush I did not take good notes. The South African street-made radio from available trash and junk parts was one of the most fascinating (and visually appealing) things I?ve seen to date in an Old Equipment Contest. It was presented well enough to beat out my well-documented Near-Mint-In-Box Crosley Book Radio (a hybrid) in the Novelty Transistor Radio Category. I was able to take firsts in the Pocket Transistor Radio Category (Regency TR-1/1G in Chrome) and 30s, 40s, 50s Bakelite/Catalin Category (display of 7 different DeWald Bantams). I am embarrassed to say that I failed to record who offered the South African Street Radio. (Help, please, someone.)

I was very much attracted to Merrill Bancroft?s comparison of two versions of the Tuska Model

225 (Early/Late). His mention of vintage Montgomery Wards advertising of a third version (with no known examples extant) was interesting as well. Wouldn?t you like to find the missing Monkey Wards T. 225?! Merrill of course had several other fine entries in the contest, as seems always to be the case. I wish I had recorded more info on the contest but I will mention Bob Slagle?s beautifully built miniature wooden horn reproducer from vintage instructions. What beautiful workmanship, artful shape, and finish!!

I missed the Banquet as usual to enjoy a fabulous dinner with Kathy at the very upscale and delicious Indian restaurant known as Copper, on West Street going into Charlotte. Dinner there is by itself worth the 12-hour round-trip from home in Virginia and Kathy deserves something special after hanging out with old, obsessive, crusty, old-radio nerds (self included) for two days non-stop. If you enjoy Asian cuisine, put Cooper on your schedule for next year. You won?t be disappointed. Reservations required. The Thai restaurant across the street is very good as well, much less formal, and won?t cost you the price of a quad of NOS WD-11s.

Unless something else of significance comes to mind, I don?t plan to send a Part IV. (You are relieved, right?)

Happy collecting to all.

See you at Kutztown in May. Or RadioActivity in June.

Paul Farmer, K3YFQ

Part II:

Hi, all. Here is more of the story:

Preliminary assessment by the CC-AWA primaries indicates that the Ernie Hite Auction grossed probably between $99,000 and $100,000. The entire amount will benefit Ernie's family, especially a college fund for his daughter, apparently. The CC-AWA is foregoing a commission on the sale in order to maximize the amount that will go to the family.

Here are some highlights from the Hite sale:

Lot# Description Price Rmk

28 Sleeper 1-tube, refinish 525

30 Radiola 1, refinish, E+ 950

36 Ezra F Bowman crystal set 1600 w/pocket watch, many extras

front panel

157 Hammarlund SP-600, E+ 500 Perfect front, perfect
electronic restoration

AK-12 1100

Zenith 4R 375

As is obvious from this list, many sets were refinished. The refinish work was generally very well accomplished; often retaining the base finishes, cleaning and top-coating with lacquer. This type of refinish work gives a very presentable appearance while retaining an honest appearance of age and (light) use.

This list was prepared from my auction notes and is not to be confused with an official CC-AWA list which I hope will be forthcoming from Ron & Co. Such a list will be useful to us all for assessing valuations down-the-road, whether for other auctions, private transactions, or appraisals.

This auction ran so long that it might have been useful to sell just the radios on Thursday evening and save the paper and tubes for the first couple of hours of the Main (regular) Auction on Friday afternoon. Consignments to the Main Auction could have been restricted somewhat to prevent it from going too long. BTW, most of Ernie's tubes were for display only, having open filaments. I did not record them or the paper.

With regard to the Main Auction on Friday at 1 PM, I have always thought that that was too early to divert shoppers on the first day of flea marketing. On the other hand, flee marketing resumes on Saturday AM, even though much of the excitement and many of the vendors have fled by then. And there is little room to move things around in the packed schedule of a 2-day Meet (Thurs 1 PM to Sat 2 PM) that has as much going on as the CC-AWA Spring Conference.

More in Part III.

Best regards to all,

Paul Farmer, K3YFQ

Part I:

The CC-AWA 2010 Charlotte Conference is a bang-up
Meet of proportions not seen here for several years or more. While the vending parking lot was not full to capacity like it was 10

years ago, there were significantly more vendor-occupied spaces (146 today, the first morning of selling) than when I was last here in 2007. Why? The death last year of long-time 1920s collecting specialist Ernie Hite, III brought his large (about 375-lot), museum-quality collection to the auction block here last night. Collectors descended from 26 states and five countries to boost prices to respectable levels for the first two hours of the auction. But the auction went on for almost five hours and by the half-way mark, aggressive spectators (250 of them in the auditorium initially) began to flag in their bidding enthusiasm. Many turned in early after a long day (and night) and many others seemed to be decreasingly willing to overspend their bank accounts by larger and larger amounts. By quarter to midnight there were fewer than 25 bidders and observers, with the half-dozen willing to continue in

earnest rewarded with premium sets at half to two-thirds their value by any measure we are used to.

And what is revealed about the future of vintage radio collecting? The passing of top-drawer collectors like Ernie, Ed Bell, Larry Babcock can only accelerate in this age of aging collecting stars. As they pass and their collections come to the auction block (Babcock's in a special auction at the Rochester AWA Conference in August I am told) in ever greater numbers, the supply of quality sets will be very much increasing as demand is dropping from the fewer and fewer well-healed collectors remaing. This almost certainly means lower prices down the road even for the rarities and museum pieces ...I think.

But who can tell the future even when all the stars appear to be aligned (or rather mis-aligned)?

Another affect of these mega-auctions of quality material is the draining, to some extent, of the drive to spend cash in the flea market on the day after. While the flea market was large today, the buying was less than brisk and by mid-morning venders were hauling their unsold sets in droves to the Meet's second auction (the Main Auction) that kicked off at 1 PM. I had not nearly the stamina (nor the purse) to endure another big auction (especially an inferrior one by comparison) on the heels of the Hite Auction. Many other vendors packed and departed before the sun rose halfway to its zenith.

So there may be radio bargains (or so they seem) in your future. But much like catching the proverbial falling knife, it may be tempting to grab a radio in free-fall but making that catch can end up being a bloody affair (when the value continues to decline).

All for now.

Another day of Charlotte tomorrow, especially the Old Equipment Contest, more vending, and the departure luncheon with Robert Lozier's thoughful and insightful remarks and

perspectives on the top entries in each contest category.

Good night all,

Paul Farmer, K3YFQ

P.S. Did I say this has been a great event here in Charlotte? Well, it has been, and I am sure it will likewise continue in a similar vein tomorrow. Cheers for the CC-AWA and their dedicated, tireless volunteers!

Hi Paul and all,

I now whch I had gone to Charlotte. I had planned to before I realized that Timonium was the same weekend and 375 miles closer to home. In my humble opinion, Timonium this year sucked! I was back home in Burke, VA by 11:00AM!

73,

John, W4AWM

Subject: [AWA] Report from Charlotte: ...Part III (Final)

art III:

Viewing the Hite Auction lots before the auction on Thursday afternoon
revented me from attending every program that was scheduled during that period
nd also the membership meeting. I will say that John Dilks' presentation on the
on Mix adventure as a radioman for the Arctic expedition was superb. John has
ccess to Mix's diary and photographs from the expedition, and he (John) is
lanning to write a book on the subject. Such a volume would likely be a huge
it among readers of early 20th Century adventure travel and
mportant scholarly documentation of the expedition. Not to mention the radio
spects of Mix’s experience and the social cultures of the time depicted by the
iary and photographs.

Although I purchased
ery little in the flea market and sold not much either (both new experiences
or me at a radio meet), I did witness lots of sets and parts changing hands
ver two days, mostly low-end sets and parts. Of course there are always
ransactions in the flea market involving valuable sets that do not rise to
ommon
nowledge. I am aware of a significant cash of Dynaco stereo equipment that was
old but because of pre-meet notification of the equipment to a limited few,
he transaction occurred so quickly it was beyond my radar initially. (There
as a Fisher 500 with no reserve in the Main Auction that I did sit through.) I
elieve there was a blue and ivory plaskon Setchel-Carlson frog eye set that
old on day 2. Asking price was $450 initially. My high-end Catalin, plaskon,
olystyrene, and painted sets of the 40s and 50s were much appreciated by

umerous lusting browsers but were not easily moved at prices that were not
ntended to represent rock-bottom bargains. I might have done better had I
pent a lot more time in my booth but what’s the chance of that? Not bloody
ikely with so much to see and do at a meet like Charlotte’s.

As we have become
ccustomed to at the Rochester, Maryland, Michigan, and Charlotte meets, the Old

I hate to miss Timonium, John, since it is usually the best hamfest that I attend. But it almost always coincides with the CC-AWA Spring Meet. I thought about departing Charlotte Friday evening and driving straight to Baltimore overnight. I am glad I did not.

BTW, I acquired the two Hallicrafters in the Hite auction and wanted to bid on the Hammarlund SP-600. But I just did not have room for it in the vehicle. I would have had to sell 6 or 8 more table sets to get it in. The SP-600 had an absolutely pristine front panel and there was a huge boast about the electronic restoration.

The third set I bought in the Hite Auction was the 1923 Cutting and Washington Model 11A. It is a beauty. I was the under bidder on the NESCO BC-144. Saved over $3,000 by not being the buyer on that one! But if it turns up on eBay and sells for $6,000, I will regret it. There are other sets I should have tried to obtain but between the psychological affects of recession and the patience I always try to practice, restraint was the order of the day.

Can you provide more detail on Timonium? I have found some goodies there over the years.

Best regards,
Paul Farmer, K3YFQ

I would expect restraint was difficult to practice. I have not been to a serious meeting in about 10 years or more. I always claim that I have the discipline not to attend a meeting, but, once I do, there is no more discipline or restraint. I have had many SP-600s over the years, in fact, I used one in the house I rented with my first wife back in the late 60's. I loved it for its 6 meter capability, as I built a solid state 6 meter AM TX out of one of the first issues of Ham Radio magazine, and worked all over with that solid state transmitter and the SP-600 receiver. Conditions to Indiana at the time were great using a Hustler Halo. 73 - Mike

Washington Model 11A. It is a beauty. I was the under bidder on the NESCO

BC-144. Saved over $3,000 by not being the buyer on that one! But if it

turns up on eBay and sells for $6,000, I will regret it. There are other

sets I should have tried to obtain but between the psychological affects of

recession and the patience I always try to practice, restraint was the order

of the day.

Can you provide more detail on Timonium? I have found some goodies there

over the years.

Best regards,

Paul Farmer, K3YFQ

10297. A FINE THING..SOME THOUGHTS ON THE HITE AUCTION

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-03-29 18:25:17 UTC
From: Roy Wildermuth
Topic: 10286 Message: 10297

A FINE THING

In all of the excitement of who and what was
there, what happened and when and what was sold and what was bought we should
pause for a moment to reflect on a fine thing.
I couldn’t help but notice Mrs.
Hite. She was busily working
through boxes of her husband’s beloved collection. She had of course seen them
all before. When they arrived as treasures from some swap meet or conference,
perhaps when they arrived heralded by the knock on the door of a delivery. Provided
perhaps by a friend, all lovingly possessed. Each having a story behind it and
further history added on by her husband the collector. I imagined how it must
have felt to see such an important part of her husband’s life be prepared to
enter someone else’s. But she worked on, always pleasant, making this chore
pleasant and easier to bear for the others. That was a fine thing.
A day
later, as many unwound by raising their glasses, a toast – many toasts in fact,
were raised to Ernie- now a part of the history he so loved and endeavored to
protect. A midnight accolade to a fallen friend. That was a fine thing.
But back to the evening of the great sale. It seems that Ernie’s
friends decided to forgo any profit from the sale of his collection. It was
announced that the usual percentage would instead be granted as an educational
fund for Ernie’s daughter. So everyone worked for no money, but not for
nothing.
At that too, was a fine thing.

That's good, Brad. Glad to hear you did well. One never knows how it will go. I had record sales last year at RadioActivity when I least expected it. And like with you, it was "nice plaskon, catalin, and mirror sets (plus a Kennedy 311).

I sure am glad I made it to Charlotte after I was unable to in 08 and 09. It was great to be back! I am really pleased with the three sets I came home with from the Hite Auction. I just keep thinking I should have kept bidding on the NESCO! Where are you going to find another one?! Especially in that kind of condition...

Best regards,
Paul

Paul...

I would offer a different view on the flea market. I've been going to
the

Charlotte meet since before it was in Charlotte -- used to be at the

Holiday Inn in Monroe. 20 years or more, I guess. I've never had a
better few

days, and Lee Gentry, who I set up with said the same thing. Nice
plaskon,

catalin, mirror sets did well. Believe me, there was no recession in

Charlotte this past week!

Just my 2 cents...

Brad

Does anyone know who the gentleman is with the red sweater and the “Not Exactly” hat? He is sitting on the back of his car, behind his goodies in the 20th photo down. There is also another photo of him earlier that Bengt took. Man, I have not seen Bengt in about 15 years or more. Anders was at AWA the last time I was there with Kathy, and, there is a photo of us in ARC, and our Penske truck full of stuff. There may also be a photo in the OTB. I believe that was in 1999. Regardless, on this fellow’s table, there appears to be a radio identical to one I bought a few months ago on ebay. It would be nice to share information about it, as I am convinced in spite of the big bucks I paid for it that it is a more recent reproduction. Alan Douglas does mention the company engraved on it in his 3 volume series. Thanks & 73 – Mike

10310. AWA Contest Results and Rules Now On-Line

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-04-03 16:24:15 UTC
From: Bruce W1UJR
Topic: 10310 Message: 10310

Hello all,

Marc has notified me that that the Cundall and Kelley results and Rollins Rules are now on line--as is the April "Amateur Radio" column--which has a special link link from the "Events" page.
You can also download the log sheet for the upcoming Rollins contest at the same location.

Keep in mind that the power level rules go into effect for the Rollins contest this year, should make it easier for those with
"mid-power" rigs to participate.

You can find the info here -->> http://www.antiquewireless.org/hamevents2010.htm.

I believe that some of the calls may look familiar. :-)

I guess its finally time I equipped the workshop with a drill press, and I'm seeking some input.
So much I've seen is Chinese and low quality, not that I want or need to spend megabucks, but I do appreciate and pay for quality.

The use would be in the electronics side of the workshop, I'm not building tables or cabinets, mostly would be drilling panels, wooden or metal chassis, light duty, but requires reliability high precision.

Wondering if anyone has recently bought one of the various small drill presses floating about? Or perhaps you've got an oldie but goodie which is still on the market. If so, would love to hear your feedback.

Thanks!

Subject: [Radiomarine] New MRHS Web Site! Bigger, Better, More of Everything!

After literally years of work, planning and gathering new material the new Web site for the Maritime Radio Historical Society (MRHS) is on line for your viewing pleasure!

The new site is expanded in every area.

It contains a vastly increased number of photographs, almost all of which have never before been published.

There's a new section on Historic Coast Stations, containing never before seen photos of stations ranging from the powerful stations of the great radio companies to little peanut whistle stations that lasted for a while, then disappeared.

The section on Alaska Fisheries stations contains the only photos we have ever seen of the stations operated by the fishing companies of that state in the 1930s.

Read about how it was to work at station WKR, Nome, Alaska written by the man who was there.

Check out the Miscellaneous and Unknown section for photos of mystery stations and installations to see if you can identify them.

The Radio Archeology section documents the expeditions MRHS members have made to historic radio sites.

The Point to Point service documents the great ocean-spanning powerhouse stations.

The Coast Station Recordings section contains several recordings that have never before been publicly available.

The Incredible Radio Tales section now has 19 tales, told by the radiomen who were there.

There's much more to add to the site but we had to stop somewhere so we could get the site on line. We certainly hope you enjoy it.

Here's a special note about another new section. There's now a "donate now" button on the site. In the past we have funded our projects from our own pockets. We will continue to do that. But some of the projects, mainly antenna maintenance, are beyond our personal means. The company that processes the donations receives a small percentage. For this they do the paperwork and issue an acknowledgment letter for tax purposes (donations are tax deductible). Every penny beyond that goes directly to the MRHS projects you see on the Web site.

Regarding site navigation, note that if you click on the thumbnail photos they will expand. To enlarge them still further just click on the expansion box (it looks like a box with a tail in the upper right of the photo).

The URL for the new site remains the same: http://www.radiomarine.org

Enjoy,

RD

Ron -

I don't think that is a sound assumption. I've see many recent examples of people whose computers either had no protection or who used free programs (or ones provided by their ISP), and I have seen some of those free/ISP programs fail to detect some new threats. Always remember that those who write viruses have an edge - a virus exploiting a newly discovered vulnerability can spread a long way before antivirus programs are updated to combat it or the vulnerability is patched. I run multiple levels of protection on my machines, but then, I've been pushing bits for nearly half a century, and have also grown paranoid from trying to rescue poorly-protected machines that have been infected.

In any case I would never open an attachment from a reflector, only one that was privately emailed to me and which I was expecting.

I regularly attach photos in other forums and keep the maximum width to 640, this stops the need to scroll sideways to see the whole picture. A good 640 by 480 can be done under 150 kb. Going less than 640 reduces the file size even more.

I only post links to my web space when supplying schematics as these are in a PDF file.

Perhaps you could post a trial photo once to see how it was received.

I think I have an original 1926 type regen rec.
It has three 01A,s in springy pin sockets, Aero coils,
Pilot var caps, and a Bradley var grid leak resistor,
all in a nice walnut cabinet.
My problem is that the front bakelite panel has a brown
"cast" to it after 80 years of exposure to ????
Underneath the dials, switch cover, and 1/8 inch
around the outer edge where it was protected by the
cabinet it is nice and shinny black.
I have tried many cleaners including GLAYZIT.
Do any of you have any suggestion I can try.

Sounds like a great find, George!

I was also gifted a similar original 1926 regen by my friend Bruce, W1UJR.
Mine can be seen here:

http://ne1s.rfburn.org/1926_ARRL_regen.html

Mine had some kind of dull film on parts of the front panel. I was able to
remove it all (after I took the photos for the web page) by polishing the
front panel with my bare thumb during use :-)

It has gone brown probably because of sunlight or the UV radiation in it. The only way you can restore is to be brutal!! You will have to rub down the panel with fairly fine wet and dry
paper, such as they use on automobile paint repair jobs (used wet). When you have got down to the black then start using finer abrasives. If you have a calico polishing wheel with an
abrasive polishing compound this will make the job easier. You simply have to go to finer grades until you get down to very fine - such as one of the proprietry compounds sold in tubes for polishing plastic. It is hard work and time consuming. If you use a polishing wheel
make sure you don`t overheat the ebonite/bakelite.

Further to my message yesterday which I did when very tired after playing 27 holes of golf.

You called this material Bakelite.
There is a very big diference between Bakelite and Ebonite (also known over there as Vulcanite).
Bakelite is a thermo-plastic made from Phenol and Formaldehyde. It is usually a dark brown colour not black, although by using fillers its colour can be changed, and is hard and brittle. It
does not generally deteriorate in sunlight. Heating it does not soften it so it remains "as moulded". Its chemical composition is pretty homogeneous.
Ebonite, on the other hand, is a heavily vulcanised rubber made by heating rubber, which is of variable chemical composition, with sulphur. The hardness depending largely on the amount of sulphur used. It is still plastic and with heating can be moulded (or straightened if it
gets distorted). At 100 C. it is quite flexible. Because its composition is very indefinite it is
more easily attacked by UV.
I think what you have is not Bakelite but Ebonite. Even at room temperature it is slightly flexible whereas if you try to flex Bakelite it will almost certainly break, unless it is very thin.
Ebonite was a very common insulator in the 1920s and extensively used for panels as it could easily be produced in sheets with a high gloss. Bakeltite on the other hand has to be moulded at high pressure so producing sheets would have been much more difficult.

Are you sure it is Bakelite? Most panels that go to a brown/gray/olive cast are hard rubber.

If you clean Bakelite with harsh caustic cleaners like 409, Castrol Super Clean, Purple Clean and the like you wind up with a brown cleaning rag... That is because the caustic attacks the phenol resin in the Bakelite. Most Bakelite has a wood dust (like walnut shells) or mineral filler to conserve the resin. Too much cleaning results in exposing the filler. That gives a chalky or brownish cast....

If it is hard rubber,you are going to have to remove several thousandths of the surface to reveal the black. The way I have done that is to remove all the items from the panel and lay it on a flat surface. Apply regular cream waterless hand cleaner like Go-Jo or Goop to the panel and begin rubbing with 0000 steel wool using overlapping circular strokes. In 20-30 minutes you ought to have the panel back to a reasonable black. (I did this just about two years ago to a Erla Superflex and it looks great.)

Hope this helps...
Robert

Hello all,

Winding up coils for the 6V6 "orange crate" transmitter.
See http://www.w1ujr.net/pastime%206v6%20kit.htm

Can anyone spare or sell me some of the smaller old lacing cord?

Mouser sells only the white or black color, my project uses a light tan or light yellow colored lacing.

Looking for some of the smaller diameter cable lacing cord, ideally yellowish in color.
I can't give you the exact size measurement, about the size of a small string.
Tying up 5-8 wires in bundle.

See photo of size and color at
http://www.w1ujr.net/Bruce's%20Bench%202010/DSC03121%20(1).jpg

Thanks!

Cordially,
Bruce J. Howes W1UJR

The Convention Preview is on the JOURNAL section of the AWA site, not the video.
The video is not by me, it's just a link to the file, not under AWA website control.
Contact the author for that.

Hi all--

The video was designed mainly to be promotional and to arouse interest. Actually, if you would click on AWA Journal Online--then "Sample the Current Journal," then "AWA Convention 2010" in the table of contents, you will find much more information than was presented in the video.

Hi Marc,

Instead of making the information on the conference a 3-step
haphazard mystery. It seems to me it would have been much better to
just list the link on the main page of the web site with a big title like this:

"2010 AWA Conference Information"
attached to this link?

http://www.antiquewireless.org/pdf/conventionpvw2010.pdf

After all, the conference is most important to most of us. Make it
easy, not hard. It's the 1-click rule Webmasters use to get visitors
to the most important information.

Once you get to the PDF, it's great, full of information.

Hello
First let me say that The Convention WebSite will open around the middle of May.Here is a copy of an email I send John Dilks which gives essentially the same information as is on the Video
Hi John
The AWA World Convention begins on August 17th, a Tuesday, at Noon. On Tuesday we are having a cocktail party, a screening of two movies, "Empire of The Air" and "Collossus, The Forbib Project", a preview of the Larry Babcock collection and the General fellowship that AWA is noted for. Wednesday is The Babcock Auction with Wednesday evening being a Beer and pizza party outside under our new tent with dancing and entertainment. Our tent, at 16,000 square feet is the largest tent used in any radio event anywhere. On Thursday our AWA 'Round-The Clock" fleaMarket begins with three days of selling, swapping, and buying. Thursday also begins the forums and lectures that AWA is famous for. This year the Forums are fresh and new. Friday is the same with our Banquet in the Evening with Carole Perry our keynote speaker. Carole heads up the Educational effort of the RC of A and has given the education forum for 30 years at the Dayton Hamvention. On Saturday,
our FleaMarket becomes a fully ARRL sanctioned HAMFEST with participation of the Rochester Amateur Radio Association. Saturday is also the AWA Auction which will be open to members of RARA as well as Convention registrants. Our Convention is open to all, for free on Saturday and unused or abandoned selling spaces are only 5.00 apiece. The AWA World Convention promises to be a completely new type of event while keeping the Unique AWA Conference flavor. We offer FREE WIFI over the entire Convention Campus and FleaMarket area. We are offering enhanced registration on-line this year with PayPal and provision for mailing materials to pre-regsistrants. Truly an Epic event.

GA to the list,

I have a complete set of "RADIO AGE" newsletters produced by Don Patterson until he sold the name, etc. to MAARC.
There are 201 issues between October, 1975 and December, 1993 (his last issue).

I also have the "new" Radio Age published by MAARC starting with the June 1994 issue and complete through all but March and April issues in 1999. A total of 54 issues.

And for those who were members of the long-defunct A.R.C.A. club (merged with AWA), I have most of the ARCA Gazette publications including the last issue before the AWA merger.

Prefer to sell the RADIO AGE as one lot. Same for the ARCA material.

Contact me off-line if there is any interest.

Thanks

I am really surprised there seems to be no interst here. The early Radio Age publication was by far the best source of early radio company history and written by the best researchers. Most of the info was never published elsewhere. If I didn't have these I would jump on them.

10360. Seeking info on antique SB100 xstr

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-04-24 01:30:27 UTC
From: k1nun@netscape.net
Topic: 10360 Message: 10360

Hi,

I'm restoring a 1956 Regency ATC-1 converter. (Ham band converter for mobile AM/SSB/CW) It uses a 1954 vintage surface barrier SB100 PNP transistor. On the case, there is a red mark (no tabs in those days). The person who gave me a replacement xstr said the red line is the emitter. The documentation for the converter identifies the mark as the collector. Please, who is correct?

Thank you,
ERIC

Topic: 10360 Message: 10361

In Philco surface-barrier transistors in this case style (AO-1, 2N129, 2N240, etc.), the red line denotes the collector. This, per Philco's data sheets on these types.

Congratulations on having a rather historic piece of gear!

Hi,

I'm restoring a 1956 Regency ATC-1 converter. (Ham band converter for mobile AM/SSB/CW) It uses a 1954 vintage surface barrier SB100 PNP transistor. On the case, there is a red mark (no tabs in those days). The person who gave me a replacement xstr said the red line is the emitter. The documentation for the converter identifies the mark as the collector. Please, who is correct?

Thank you,
ERIC

In Philco surface-barrier transistors in this case style (AO-1, 2N129, 2N240, etc.), the red line denotes the collector. This, per Philco's data sheets on these types.

Congratulations on having a rather historic piece of gear!

Ludwell Sibley

Sad news. Picked this up this evening ....

Vince visited my Museum at the AWA meet in Rochester a few years ago. He was an avid collector.

73, John Dilks, K2TQN
.-.-.-.-.-.-.

Guys:
I just read this sad message from G3SXW
73 Don K8MFO

Chaps,
Sorry to report that Vince Thompson, K5VT, died this afternoon, 24th April. He was diagnosed with acute myeloid leukaemia (M5) four weeks ago but did not survive the chemotherapy. He was a fit, strong 67 years of age. A sad, sad day. More later,

73 de Roger/G3SXW.

10367. TNT transmitter and PS ??

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-04-25 16:12:53 UTC
From: barry whittemore
Topic: 10367 Message: 10367

I am getting ready to build up a TNT for 80 meters from the VE7SL web site design.
I have assembled a collection of parts, i have modern caps as i did not get vintage caps in the correct values.
I Have the Tube needed and vintage Varicap and Vernier.
I also scrapped a basket case old Philco radio and have Transformer, type 80 and Choke to build a Power supply for it.
I have read conflicting ideas on weather that will be an adequate power supply for it.
I have buzzed out the Transformer and it is good but i do not want to go to the trouble of making it if it will not work.
Any advice would be appreciated.
Thanks and 73
Barry

Barry - if you can get somewhere around 350V keydown you should be fine. Going solid-state in the power supply will gain you some extra voltage compared with using the 80 as there will some voltage drop through the tube. Try breadboarding the supply first if you are worried and put a load on it to see how it holds up. The biggest problem with these transformers (unless it is from a big old monster Philco) is that they easily sag under load so that you may end up with considerable voltage drop between key-up and key-down which will negatively contribute to note stability. These old self-excited designs really prefer a regulated supply.

However, even a small 3 or 4 watt TNT (which should be no problem), should provided endless hours of fun, both in the constrction and the on-air operation, as there is a lot of activity back your way.

Thanks Steve,
I have no problem using solid state rectifiers. I will still use the type 80 with the filament hooked up for effect.
The diodes can be hidden underneath.
could you please let me know what your Key down load is. The design that i am going to build is from your site.
If i know how many mA i need i can test it out.
Thanks

10373. SK: Vince Thompson K5VT

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-04-26 16:00:46 UTC
From: Jim Kreuzer
Topic: 10370 Message: 10373

*Hi All,

I just received this touching eulogy from Tom Perera, he knew Vince as
well as I did, and I thought I would repost this on the AWA Reflector:

73 Jim and Felicia Kreuzer N2GHD KA2GXL

AWA Assistant Curator
AWA Librarian
*

/I just received an email from Jim Kreuzer who was with Vince in Phoenix
before and after he died.
This is final confirmation of this sad tragedy.

I would like to share with you a few things that Vince told me over the
years that may help explain his purchase of what must be tens of
thousands of telegraph keys, QSL cards, early radios, etc.

Vince spent most of his time caring for and operating on women with cancer.
He told me that in many cases there was no real hope of recovery and
that his job was to try to prolong their lives and make them as
comfortable as possible as they transitioned into death.
Occasionally he was able to provide a cure but most of the time he
brought them temporary relief.

If any of you have tended for a loved one who has cancer or some other
fatal disease, I am sure you have experienced how much sadness and
emotion goes along with the gradual transition into death. Can you
imagine the stress and sadness and emotion that go with caring for
hundreds at a time and thousands over the years.

Vince confided in me that his buying of keys and electronics brought him
relief from the emotions of the tragedies that he dealt with in his
patients. He loved Ham Radio and participated fully in DX contests and
other ham activities and his collecting of ham artifacts brought him
both satisfaction and relief.

He knew he was addicted to this behavior and he accepted that he was
powerless to control his addiction but it brought him relief and allowed
him to continue bringing comfort and relief to his patients and love to
his son.
If he had been addicted to alcohol or drugs, they would have brought him
relief but he would not have been able to function in his self-assigned
role as caregiver to thousands of cancer patients.

I hope this helps to explain his behavior over the years.

Vince was a wonderful friend to all who knew him well. He cared deeply
about other people and supported and cared for his friends as he did for
his patients. He will be missed at many levels.

Rest in Peace, Vince... You have earned it... Tom

It'll be fine to get you in the 5W - 20W input range. I run my PP45 TNT
from a power supply built with a transformer from a 1927-29 era Kolster
broadcast receiver.

I'd be authentic and use a hollow-state rectifier - I doubt the guy on the receiving end will notice the difference. I use an 83V instead of an 80 because the voltage drop is less (and because I happened to have one).

You are right Pat, the panel is ebonite. When I disassembled the panel to clean it and removed the sheet metal hand capacitance shield I found the back side had a 3-d star burst of 3/8 to 1/2 inch pattern all over it. Also there is a gold colored curly line
design in two corners, like maybe it was a front panel for something before.

Subject: Re: [AWA] 1926 regen

Further to my message yesterday which I did when very tired after playing 27 holes of golf.

You called this material Bakelite.
There is a very big diference between Bakelite and Ebonite (also known over there as Vulcanite).
Bakelite is a thermo-plastic made from Phenol and Formaldehyde. It is usually a dark brown colour not black, although by using fillers its colour can be changed, and is hard and brittle. It
does not generally deteriorate in sunlight. Heating it does not soften it so it remains "as moulded". Its chemical composition is pretty homogeneous.
Ebonite, on the other hand, is a heavily vulcanised rubber made by heating rubber, which is of variable chemical composition, with sulphur. The hardness depending largely on the amount of sulphur used. It is still plastic and with heating can be moulded (or straightened if it
gets distorted). At 100 C. it is quite flexible. Because its composition is very indefinite it is
more easily attacked by UV.
I think what you have is not Bakelite but Ebonite. Even at room temperature it is slightly flexible whereas if you try to flex Bakelite it will almost certainly break, unless it is very thin.
Ebonite was a very common insulator in the 1920s and extensively used for panels as it could easily be produced in sheets with a high gloss. Bakeltite on the other hand has to be moulded at high pressure so producing sheets would have been much more difficult.

Sent: Thursday, April 08, 2010 6:47 PM
Subject: Re: [AWA] 1926 regen

Are you sure it is Bakelite? Most panels that go to a brown/gray/olive cast are hard rubber.

If you clean Bakelite with harsh caustic cleaners like 409, Castrol Super Clean, Purple Clean and the like you wind up with a brown cleaning rag... That is because the caustic attacks the phenol resin in the Bakelite. Most Bakelite has a wood dust (like walnut shells) or mineral filler to conserve the resin. Too much cleaning results in exposing the filler. That gives a chalky or brownish cast....

If it is hard rubber,you are going to have to remove several thousandths of the surface to reveal the black. The way I have done that is to remove all the items from the panel and lay it on a flat surface. Apply regular cream waterless hand cleaner like Go-Jo or Goop to the panel and begin rubbing with 0000 steel wool using overlapping circular strokes. In 20-30 minutes you ought to have the panel back to a reasonable black. (I did this just about two years ago to a Erla Superflex and it looks great.)

Hope this helps...
Robert

10385. FCC to reclassify portions of broadband

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-05-06 01:35:14 UTC
From: Joseph W. Koester
Topic: 10385 Message: 10385

Interesting, not exactly old radio, but could have implications for all of us!

Genachowski to reclassify portions of broadband to assert FCC authority over Internet access
The chairman of the Federal Communications Commission has decided to reclassify portions of broadband as a telecommunications service, allowing the FCC to carry out a net neutrality rule by putting the companies that provide Internet access more concretely under its control.

FCC Chairman Julius Genachowski will announce his decision on Thursday, the agency said. Any proposal would be open to public comments and then up for a vote from the five-member commission. The decision comes after pressure Wednesday by key lawmakers and public interest groups to reclassify broadband services, which were deregulated as a service the agency had "ancillary" authority over.

Sources said Genachowski appeared to have shifted his thinking from late last week, when it looked like he was not inclined to make such a move. Broadband service providers and the two Republican commissioners have warned against reclassifying broadband. They said doing so would create more regulatory burden from broadband providers. One source with knowledge of the discussions in the FCC this week said a letter from Sen. Jay Rockefeller (D-W.Va.) and Rep. Henry Waxman (D-Calif.) supporting reclassification provided political support for the FCC to shift Internet lines to a more regulatory framework but with lighter regulations. The lawmakers said if the FCC defined broadband as a telecommunications service, it would have to strip Internet access providers of rules that apply to phone companies. The move will be unpopular among broadband service providers and Republicans ahead of elections this fall.

An FCC official said in a statement that the agency's move will be somewhere between deregulation, the state of broadband services today, and a more regulatory approach.

"The Chairman will outline a 'third way' approach between a weak Title I and a needlessly burdensome Title II approach. It would 1) apply to broadband transmission service only the small handful of Title II provisions that, prior to the Comcast decision, were widely believed to be within the Commission's purview, and 2) would have broad up-front forbearance and meaningful boundaries to guard against regulatory overreach," the official said in a statement.

Currently broadband is categorized as a Title I information service with weak FCC oversight. Some proponents of net neutrality have called for the FCC to reclassify those services as a Title II common carrier service, which is more clearly under the FCC's authority.

The decision comes after a federal court decision created strong doubts that the FCC would be able to carry out portions of its national broadband plan and its proposed net neutrality rule, which would require all broadband providers to treat traffic equally on their networks.

"The Chairman will seek to restore the status quo as it existed prior to the court decision in order to fulfill the previously stated agenda of extending broadband to all Americans, protecting consumers, ensuring fair competition, and preserving a free and open Internet," the official said in a statement.

Proponents of reclassification said the move appeared to be a change of position after key lawmamkers and a grass-roots campaign called for Genachowski to reclassify broadband services.

And Susan Crawford, a law professor at the University of Michigan and former economic adviser to President Obama said the move is a good middle ground for the FCC.

"The FCC has clearly thought through all the implications of using its regulatory authority to provide for a a level playing field for innovation and job creation in America," Crawford said. "The FCC has reached the right result."

Genachowski's office and general counsel are briefing officials Wednesday on his decision. Democratic Commissioners Michael Copps and Mignon Clyburn have said they would support a proposal by Genachowski to reclassify broadband.

Instead of constantly updating all of you on my progress with the AWA videos I just suggest that you keep on checking the AWA Channel. I am in the process of uploading much of the AWA Museum Video Catalog to YouTube. We had discussed making this a member's only premium but felt that "showing our stuff" might be a good way of attracting interest in our organization and hobby.
 In the course of editing these features I have found them to be extraordinary especially considering the rather basic equipment originally used. Eventually I will publish a list and place links on our web site. but for now I suggest that you use the link I am providing and check the site every day for new items. We will be posting the newer videos including a brand new Museum Tour with Ed Gable as well as another Ed Gable presentation recently made at a meeting of The Rochester Amateur Radio Association on the History of the Telegraph. The newer videos are made in Hi-Definition and are suitable for group showing.
I need to thank Mike Csontos at the AWA Museum for his work in sorting and initialing digitizing the AWA Slide shows. And of course all of the presenters who created all of this fine work.
Here is the link   http://www.youtube.com/user/AWAMuseum

10390. AWA Museum Tour on YouTube

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-05-08 20:10:16 UTC
From: Roy Wildermuth
Topic: 10389 Message: 10390

I have taken the Docent training video and posted it on youTube. It appears in 14 parts and will take about 15 minutes to upload each part, so if you start watching it and run out of parts do not despair they are on their way. This may very well be the last complete video tour of the Academy Building Museum. The quality is pretty good considering it was made on older VHS equipment. Ed Gable K2MP, Curator Emeritus is the host. This production was formerly used for internal training purposes only and as such will be unseen by most AWA Members outside of the AWA Docent group. One note, the AWA Museum channel was named as such when I thought that would be the name of the organization. I am currently investigating a name change. But currently , to do so, would require reloading the video library, which I do not have time for.
The AWA Museum Channel can be reached at

Hi,

I was at the Kutztown show last weekend and picked up a nice Precision E200 Rf signal generator for myself. A buddy of mine sold it to me recapped and calibrated. Currently I'm looking to get a copy of the operator's and service manual for it. Bama has only a few pages with schematics and no operating or calibration instructions. If someone has a book they could share with me, I would appreciate it.

This generator seems to be from around 1940 and is not the E200-C from the late '50s. There seems to be a lot of free manuals around on the web for that one. (Including on bama)

The tubes in mine are an 80, a 6C5 and a 6SJ7.

Thanks, 73,

Mark, N3NBL

If they are the old paper tube and wax caps the wax can be melted out. I use an old toaster oven but a heat gun could be used also. When the wax is melted the guts can be pulled out with a pair of pliers and the tube wiped clean with a rag.

You may have to extend the wires on the replacement cap. Place it in the empty tube and fill some of the excess space with paper towel, cardboard disk or other material. I save the old wax and add beeswax and/or candle wax. The old wax adds colour to approximate that of the original.

Poke a hole in a piece of cardboard for the wire so that the cap can be stood up on edge and pour the melted wax in the end of the tube slowly letting it cool. Keep filling as there will be shrinkage. When cool turn the cap over and fill the other side.

Some caps will have wax that will not melt. You can also use artwork that duplicates the original cap, print it on paper and roll it up to make a cap tube for stuffing.

I should have added that you could also seal the tube with hot melt adhesive but the wax looks more authentic. You could also plug the tube partly with hot melt then finish with a little wax.

10406. "The Great Wurlitzer Band Organ Recall"

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-05-26 21:16:13 UTC
From: k3nau@aol.com
Topic: 10406 Message: 10406

Greetings:

Two great events at the same time in Buffalo, NY in July between the 7th and 10th. A conference of collectors of automated musical instruments and band organs. I attended a band organ rally in upstate NY two years ago and it was fantastic. "Band organs" were commonly used in carousels and "automatic musical instruments" which include player pianos and theater organs.

What does this have to do with antique radio...well, not a lot, but I know there are a lot of music lovers in the group and many that love anything old, electrical/mechanical and things remotely controlled by radio. The conference/rally will be centered on the grounds of the Old Wurlitzer factory in Tonawanda (Buffalo area), NY. The coordinator told me today, they are expecting between three and five thousand people. I would not be surprised to see the higher number if the weather is good.

"THE GREAT WURLITZER BAND ORGAN RECALL"
July 10 & July 11, 2010
Wurlitzer Company Grounds
908 Niagara Falls Blvd.
North Tonawanda, New York

For more information, look at the Web sites of:

The Carousel Organ Organization of America
http://www.coaa.us/

and the

Automatic Musical Instrument Collector's Association
http://www.amica.org/Live/index.htm

For detailed information on the rally, look at
http://www.amica.org/Live/Conventions/Past-Convention-Websites/2010-Buffalo/index.htm#Start.

There will be a vendor's area/flea market running concurrently. Who knows, you may be able to find some old Wurlitzer radio-controlled equipment there.

Best of all, there is no admission fee for visitors and the music is lively and uplifting. :-)

I hope to see a few of you there.

Chuck

Disclosure: I am not a member of either group, not own any related equipment. I do have a cousin show is really big into this stuff and she introduced

me to band organs two years ago. Therefore, my only interest is in encouraging you to have fun through music. :-)

Ron -

I face the same thing with requests to join my genealogical forums. I use Stop Forum Spam to check every applicant - checking their IP address, email address and user ID against a database of known spammers:

http://www.stopforumspam.com/

Since my forums deal with New England genealogy, I also automatically rule out any IP address from the Far East, using:

http://www.domaintools.com/

to check that. If I have sufficient reason to suspect that someone is a spammer who is not in the Stop Forum Spam database, I add them to it at:

http://www.stopforumspam.com/add

It is a nuisance, but after the first time that a spammer hit my forums I have followed this course without fail, and have not been hit since.

Angela Noseworthy of the Admiralty House Museum, Mount Pearl,
Newfoundland has
an unidentified radio. She wondered if it could be a National and how old it
might be.

Below is her note to me. Photos may be found at
http://www.prismnet.com/~nielw/AdmiraltyHouseMuseum/

I've already given her my ideas based on the NCCo "logo" and the single
tipped
RCA tube but I wondered what the rest of you thought. Could it be a National
and, if not, what? and about how old is it?

73,
Niel - W0VLZ

****

Hello,

I work at an early communciations museum in Newfoundland Canada and am
looking
for information on a receiver I believe is National Radio Company make.
I came
across your site online and I'm hoping you might be able to confirm this and
possibly give me an estimated date of manufacture.

It's a very old machine - most closely resembling the 1-10 on your site.
There
are no serial numbers on the machine - just a diamond pattern in the top
as well
as NC CO on one of the knobs. There is an RCA tube inside. I have attached
photos to illustrate.

Any information would be greatly appreciated,

Niel, we have a National 1-10 in our Asheville NC museum but the inside is very different from the set you have. If my memory is correct the coils are all stored inside; you see them when you open the lid on the top. I believe your set covers much lower frequencies and predates the 1-10 by a number of years!

73,
John Travis, W4QCF

10414. GE-Branded Metal Tubes

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-06-01 04:38:48 UTC
From: Ludwell Sibley
Topic: 10414 Message: 10414

I'd like to incite a little research into metal tubes . . .

At this time 75 years ago, RCA was getting into production of the "original nine" metal tubes (5Z4, 6A8, 6C5, 6F5, 6F6, 6H6, 6J7, 6K7, 6L7). However, GE was doing the same - they made at least some of these types for their upcoming 1935 line of radios (this, per the memoirs of Wm. White, tube-development manager there). He says they made tubes up to the summer of 1936, when RCA was in full production.

Collectors are generally familiar with RCA's original steel-stamped metals - the type number and "RCA / Cunningham" were embossed into the metal.

However, I *suspect* that some samples on hand here were from the early production by GE. They are distinctive, having the features of:

(A) Stamped in orange ink on the shell: the type number in a circle, the GE monogram, "GENERAL / ELECTRIC" in a Deco-ish font, "MADE IN U. S. A.," and "LICENSED AS STATED ON CARTON."

(B) A plain base without the molded-in "LICENSED ONLY TO EXTENT INDICATED ON CARTON" used by essentially everybody else.

(C) The original-style two-part shell, with a seam where the shell is welded to the base ring.

(D) The original-style individual eyelets for the leads and metal seal-off tube (based on taking the base off one tube). This, as opposed to the later glass-button-stem construction.

(E) On the 6C5, the original-type stepped-down-diameter shell.

Tubes seen so far with these features are the 6A8, 6C5, 6F5, 6K7 and, discovered by Jim Cross, 6R7. (The 6R7 came soon after the "original nine," in Jan. 1936.)

GE's 1935 radios used all of the "original nine" types in one model or another. For the 1936 season they added the 5W4, 6L6, 6N7, 6Q7, 6R7, 25A6, and 25Z6 - probably mostly as made by RCA.

Anyway, could I stimulate some of the following?

(1) Look at your buckets of metal tubes, and please let me know what types you have from the GE orange-stamped series.

(2) Look inside your 1935 GE radios and report what orange-stamped types you see in there. (Yes, mere presence in the radio doesn't certify the age of the tube, but would be helpful evidence.) The models in question

are the A53, A63, A64, A65, A67, A70, A75, A82, A87, and A125 (the latter a console).

(3) Look inside your 1936 radios and report what orange-stamped tubes, if any, are present. The models are the A52, A54, A55, A83, A85, E61, E62, E68, E71, E72, E76, E81, E86, E91, E95, E101, E105, E106, and N60. Also the FA60 car radio, the only GE set known ever to use the 6R7.

I'll gratefully take your comments directly (to tubelore@...), summarize them, and report back. If the orange-stamped tubes turn out not to be "original," I'll fess up accordingly. In any event, this will give insight into what types GE actually made.

Thanks!

Ludwell Sibley

I have an old Triplett 610. Recently ,on the AC scale it is way off . It was pinning the meter in the 300 volt position when measuring 115 volts AC. On the 1200 scale, it reads about 1150 volts for 115 volts.

Any idea on a cause and or/cure?

Tks,

Gerry

Hi Gerry,
It sounds like one of the internal shunt resistors has opened or changed value. You'll have to find a schematic of the meter (many meter circuits are now on the Internet) and test the resistors inside with another meter. You might also look at the printed circuit to see if there has been a trace that has been burned open. Meters take a lot of abuse. As long as the meter movement is working correctly, you should be able to return the meter to service. If it is a favorite, you might consider sending it to a repair facility for recalilbration.

I today picked up a Firestone console which is a pretty fancy one made in 1941. (11 tube chassis) Now in the audio output circuit it has a pair of 6V6s in pushpull. But ahead of the pair of 6V6s is a 6SQ7 which is marked as audio inverter driver. This is the first time I have sen this tub used as a audio driver of in the audio output section of a radio. Has anyone else here seen a 6SQ7 used in any part of the audio ouput circuit? Thank you Dave N2TJQ

Yes, triode inverters are not that uncommon in push-pull circuits. RCA has many examples in their sets made in the late 30's and early 40's. Have also seen 6J5's used in that application, e.g. Magnavox.

Date: 2010-06-04 05:32:25 UTC
From: kd4hsh
Topic: 10423 Message: 10423

I know it is a little late but I am trying to put together a documentation package for this farm set that runs off 6 VDC or 110 VAC for the MAARC Conference next Friday.

I have the Lafayette catalog showing this set but apparently Riders never listed it. radiomuseum.org seems to show only the two catalog pages I already have.

Uses the 0.15A filament tubes: 6D8G, 6L5G, 6T7G, 6S7G, 6G6G & 6ZY5G
I don't think I have another set that uses this tube combination.

A scan of the schematic will be appreciated.

Robert

Never mind.... Thanks to the nifty Nostalgiaair.org site, I did a search on the tube line-up and in about 15 minutes discovered that this exact set is listed as a Parker McCrory Mfg. Co. "1939 Masterpiece 6C" (Parmak brand)

Interesting in that my Lafayette has a RPC license tag riveted to the chassis. Does that mean that the chassis was actually built by Radio Products Corp. (Chicago) and not by Parmak?

I just obtained the subject item, which is a two tube regen. I was fortunate to get three coils with it. However, I cannot find any info on it anywhere so far. So, any assistance would be appreciated.

As for the CR-18, I am looking for an extra coil form. I do not have the 160 meter coil for it, and, if I cannot find an original, I would like to build one. So, any assistance here would also be greatly appreciated. Thanks & 73

I found a strange object at the last hamfest. It is a round cylinder about 4" in diameter and 2" high with two binding posts and a knob on the top. Inside is a variable cap, and a coil is wound around the outside of the cylinder. The coil is covered with a decorative paper label with the words "The Famous Improved Kleen-Tone". Looks like the coil is in parallel with the cap.

Could this be some sort of wave trap to try and reduce/remove a strong station close to another station?

Google doesn't pop up anything?

Thanks.

10431. REL-192 & Greebe CR-18

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-06-06 19:28:58 UTC
From: Mike Feher
Topic: 10431 Message: 10431

I made this post yesterday, but, never received it, so, I do not know how many others saw it. I know John Dilks saw it as he emailed me direct, as well as a an old friend, WA5UEK. Regardless, here is the post again.

"I just obtained the subject item, which is a two tube regen. I was fortunate to get three coils with it (REL forms are scarce). However, I cannot find any info on it anywhere so far. So, any assistance would be appreciated.

As for the CR-18, I am looking for an extra coil form. I do not have the 160 meter coil for it, and, if I cannot find an original, I would like to build one. So, any assistance here would also be greatly appreciated. Thanks & 73 - Mike"

Some additional clarification, by subject item, I mean the REL-192 receiver. Which BTW is strictly a ham band receiver. Easy to tell as there is only one tuning capacitor and of relatively low capacity.

Regarding the CR-18, I have some original coil stock, but, about 12 turns too short to make an exact replica for the coil that covers 160. Regardless, what I have should be adequate for 160 only, as I really do not need it to go lower in frequency. So, I am looking for a damaged or beat up coil, so I can use the base. I would be happy to pay a higher than fair amount for an original coil, and of course less for just a usable coil base. Thanks again. 73 - Mike

Hello John,

I used to own one of these a few years back. Nice piece of 1920's radio "snake oil". You are supposed to connect it between your wire antenna and the antenna input of your '20s battery radio to help suppress unwanted signals. I managed to find an advertisement for it in one of the radio mags of the time and it was absolutely hilarious! I seem to remember the manufacturer claimed it would do just about everything but turn lead to gold. After reading the full advertisement you felt as if investing in a sophisticated superhet would have been an unnecessary waste of time and money!

It does indeed sound like a wavetrap. There's nothing invalid about that concept!

A half decent wavetrap in the antenna can help clean up reception a bit provided everything else in the radio and antenna system are up to snuff and working correctly.

Now the advertising of the day? Well that was clearly aimed at the great unwashed masses! Quite comical!

Indeed it can! I used to have an NC-156, which had a 1500KHz IF. At night the broadcast stations on or near that frequency would bleed through on 160M, because of the combination of proximity of the IF to 160M, and insufficient front-end selectivity. I made a high-Q parallel-resonant circuit with some Air-Dux and a 3-section broadcast band air variable with all 3 sections in parallel, resonated it to 1500KHz, and put it in series with the antenna lead. It was quite effective in eliminating the interference from the broadcast stations.

Hello everyone
The learadio I already posted about is a rack mounted unit and the bands are
,Airline communication, Marine Broadcast, and Beacon.
Most of the learadio units I have seen are not rack mounted.
It has some knobs which I don't know what are for.
Preselector? and B.F.O ???
There is a switch underneath which has no label. Does anyone know what that
is for?
Thanks in advance.

The end of EBAY is near, and so are small businesses.

See Stacy Johnson's web page report on tonight's news.....
http://www.moneytalksnews.com/2010/06/16/on-the-horizon-a-tidle-wave-of-tax-forms/

Sorry for the bad news, but it just keeps coming.

Thank you, Paul. Good advice. If we listened to every prophet of doom about a stupid proposal that will never see the light of another day, we would be frozen in our tracks.

The recent eBay policy change notice says,

/Exception:/ Very small merchants won't be issued [IRS] information returns.
"Small" for this purpose means annual gross sales on merchant cards of no more than $20,000 or 200 or fewer transactions. In other words, reporting is required only if gross amounts for the year exceed $20,000 and there are more than 200 transactions.

Get a grip.... :-)

10453. Ham Radio on History Detectives + Theremin next week

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-06-23 09:28:16 UTC
From: John Dilks, K2TQN
Topic: 10453 Message: 10453

This week on History Detectives

A HAM radio operator who now lives in Beverly Hills, Florida made contact with another radio hobbyist in Baltimore, Maryland. The second man said he was a NASA engineer and pioneered some early space projects. Before signing off, he promised to send a memento of their conversation.

http://www.pbs.org/opb/historydetectives/investigations/801_satelloon.html

---

Next History Detectives June 28

A man from Santa Fe, New Mexico bought a theremin off e-Bay. If you've never seen a theremin, you've undoubtedly heard one. One of the first electronic instruments, and the only instrument played without touching, the theremin makes eerie, ethereal music, the kind that creates uncertainty and suspense in movie sound tracks. Robert Moog, creator of the electric synthesizer, called the theremin "a vital cornerstone of our contemporary music technology."

I watched the show Monday night and could not believe how uninformed the "investigator" was. He really didn't understand that an amateur radio callsign was a unique identifier for a given time and that half his research was done for him by that fact. I guess we amateurs still have a lot of work to do to get some of the basics out on our hobby.

It was nice to see the shack past and present of the amateur who spawned the inquiry.

If any of you remember going outside to see the Echo-I and Echo-II satellites ("satelloons") you'll get a kick out of the piece.

I would bet that 98% of the general population have no idea
what amateur radio is.
A couple of weeks ago I was walking into the nursing home
where my mother lives, sitting out on the front porch
were an old lady and a nurse.
I said hello and she replied and a couple of words were exchanged
about the rainy weather we were having at the time.
Then she looked up and asked what that on my hat means,
I had on my black ball cap with my call on it.
I told her it was my ham radio call sign.
She looked at me like I was speaking greek, she said,
"I'm don't know what that means...'
After spending a few minutes trying to explain it, it was
clear that she really didn't have a clue what I was talking
about.
I finally asked her if she knew what CB is?
She said sure, so I tried to relate ham radio to CB,
she was blown away by the fact that we could talk all over the world,
talk to the International Space Station, the Space Shuttle,
bounce signals off the moon.

It would be interesting if the ARRL would pay for one of the
polling firms to include in one of their surveys a question
asking a large sampling of the public if they know what
Amateur (Ham) Radio is.
98% may be to small, we may find it's 99+%.

This comes under the category of "unknown unknowns." There are two kinds of unknowns, "known unknowns" and "unknown unknowns." You are way ahead on the things that you know you do not know. Because you know enough to phrase questions and seek answers. But with things that you don't know (and never knew) you don't know, you are nearly helpless in eliminating your ignorance.

From: dadellers
Topic: 10465 Message: 10465

I have a Phildo model 116B tombstone that I am restoring. I need some help with the speakers wireing. While working on the radio last night the chassis fell pulling the wires off the transformer that is mounted off to the side of the speaker. These four wires are from the plug that plugs in the back end of the chassis at the one end and go though a silver cover to the transformer.

Now the four wires are different colors. One is black(?) with red tracers. One is white, one is yellow and last one maybe red or orange. (?) I need to know which of the four terminals each one of these wires go to. The schematic does not show colors of these four wires and does not show the connections either clearly. So any help with this I can hook these four wires back up on the transformers terminals correctly would be a great help. Thank you Dave N2TJQ

10466. Two Edison Chassis available

Both by:
Thomas A. Edison Inc.
Orange New Jersey

Edison Receiving Unit
Type 7R
Serial No. 707262
Four #227's + one unid. in an RF can
veneer covered face plate w/drum tuning dial
2 of 3 knobs (tuning knob missing)

Edison Power Unit
Type 8P
Serial No. 811744
280 + two 245's + speaker (paper cone is shot)

These have been in a junque shop for over a year and he finally put them outside on the "Make An Offer" table. I paid $30 for them. They look to have come out of a lowboy cabinet. RX had three 27's in it. All others are missing. Interconnect cabling in reasonable shape. Power cord is ratty.

Chassis painted "Hunter Green" and rusty on top, but pristine underneath. Pretty surprising. Punched aluminum RF cans underneath are still bright and shiny.

Photos on request.

I'd rather not ship them - The Power Unit alone weighs most of 40# and UPS (AKA: "OOPS") is not so reliable. I dn't want them to end their days inder a forklift. Contact me and we can figure something out.....It's beautiful this time of year on the North Coast of California, hihi!

10472. RME-69 project (somewhat long)

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-07-14 16:40:50 UTC
From: Larry Szendrei
Topic: 10472 Message: 10472

All,

Just wanted to post about what's on my bench presently.

This spring at the Deerfield hamfest I purchased an RME-69 "project" unit from George Rancourt, K1ANX, through a pre-arranged deal. It was very rough cosmetically, and someone had done a real hack job with wholesale capacitor and resistor replacement; that was a real mess. There were even several unsoldered wires, and B+ was shorted to ground due to a wiring error. George was parting with it because this was a project he concluded he'd probably never get to. All the important stuff was present though, and the RF coil and bandswitch wiring were, at least, unmolested.

The RME-69 is a mid-1930s design, using pre-octals. There was a noise-limiter upgrade on a sub-chassis which plugged in to the two 6D6 IF amplifier tube sockets, and to make everthing fit this module uses octals. (6K7 1st IF, 6L7 noise-controlled 2nd IF, 6J7 limiting amp, 6H6 noise detector). My example came with this unit.

Due to summertime projects and other demands on my time, I haven't had a lot of time to work on this until this past weekend, and have been picking away at it here and there until then. I'd ripped out pretty much all the underchassis wiring (except for the RF coil/bandswitch assembly) because it was just beyond hope. I also didn't even try to power up the set before proceeding with this, for obvious reasons. My friend Bruce W1UJR was kind enough to lend me his RME-69 so that I could reproduce the original component placement and lead dress as I completed the rewiring job.

Anyway, last weekend we had some rain, so I had a chance to spend some quality time with this project. I completed the underchassis re-wiring, and fired the set up with a pair of 6D6s in the IF sockets as originally designed. Once I aligned the IF circuits to the XTAL frequency I started hearing signals. The brodacast band was way off calibration so I took care of that. I have not done any further alignment of the frontend yet, but even so, man, what a hot receiver! Even at 30MHz, I can tell just by peaking the antenna trimmer on band noise that its sensitivity is better than most other similar sets of the era that I've played with. All bands except band 2 (see below) produced signals, but fewer and weaker on band 6 (the highest frequency band) due to the MUF.

I then replaced the IF tubes with the noise limiter module. An intermitant short from the 1st IF plate to ground in that module took out the B+ decoupling resistor but the 2nd IF primary seems no worse for the wear (dodged that bullet, whew!). Fixed the short and replaced the smoked 2K resistor, then had to re-align the IF back to the XTAL frequency due to different parasitic capacitances in the octals and wiring. Other than now

having a working noise limiter, the receiver now functions just as it did with the 6D6s in the sockets.

Band 2 was initially dead but that turned out to be a trimmer cap shorting to ground. Troubleshot and repaired that last night. Still to do is to pad the BFO onto the IF frequency (it's too high by about 10 KHz), rewire the XTAL filter back to original, complete alignment of the frontend, and cosmetic restoration of the front pannel, including replacing the dial glass which is broken. The best part of this is there's no panel lettering to worry about!

73,
-Larry/NE1S

10474. Help with a McMurdo Sliver Masterpiece V

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-07-14 21:45:17 UTC
From: Joseph W. Koester
Topic: 10474 Message: 10474

Hi Folks,

I am in need of a schematic for my McMurdo Masterpiece V. I looked in my Rider Indexes and I cannot find it. I thought I had seen one many years ago.

I am starting with the Speaker which is a heavy Jensen 18 inch monster. The field is open. We got the field out and discovered that there are two separate field coil windings in there, massive coils that are quite heavy.

This speaker also has what appears to be a crossover network in the base, a toggle switch, a four pin socket (possibly for tweeters or a second speaker of some sort?) an output transformer, and some other sort of choke or coil in the speaker housing. A very complex speaker. Joe Zahnen is going to rewind the two field coils when we locate a large spool of fine wire (any good sources for about 10 pounds of wire, size to be determined?) and I will have to have the speaker re-coned.

But I need to get the speaker repaired and going before we start on the restoration of the radio.

A schematic is a good first step, and a location for a schematic (which books or volumes?), or a source (someone probably has a copy somewhere), and any advice would be appreciated from someone who has repaired a similar speaker and can address the complex nature, were there tweeters or remote speaker, etc.?

Thanks in advance. This will be a great radio when it is restored.

Regards,

Joe Koester, W4NSA

1) Which code do you need - BAUDOT, TTS, or ASCII? I presume you don't need BCD - I don't think many Model 29s were built, and I've never seen one.

2) Although the loop could be run at 60 ma (IIRC that was the upper limit for Western Electric / Teletype machines), the normal loop value was 20 ma, just enough to act as sealing current (aka wetting current). Bear in mind that its has been almost 30 years since I was an AP tech working daily on Teletype equipment.

Friends,

Offered for sale is a National SW-5 "Thrill Box" with the "Green" coil pair 2.5 to 4.5 Mhz. and the National 5880 Velvet AB power supply.

The receiver is complete with tubes. It has original, soiled, brown wrinkle paint on the receiver, with minor chassis rust, power supply finish is good. The radio has also been tried with the "10" series and the "60" series Amateur Bandspread coils and performs very well.

There is NO guarantee as to operation, as with all old electronics, shipment may cause defects.

Images of the National SW-5 "Thrill Box" with the "Green" coil pair 2.5 to 4.5 Mhz. and the National 5880 Velvet AB power supply.

I am working on a Federal model 59 radio and all three transformers are open. Can anyone provide me with the resistance/impedance of the type 65 and 66 audio transformer and the type 35 RF transformer? I checked the web and couldn't find any working transformers for sale.

What is the possibility of disassembling the transformers and replacing the windings with a modern ones from a disassembled transformer (i.e. one from Hammond)?

Thanks for the advice.

John

Subject: [AWA] Federal model 59 transformers

I am working on a Federal model 59 radio and all three transformers are open. Can anyone provide me with the resistance/impedance of the type 65 and 66 audio transformer and the type 35 RF transformer? I checked the web and couldn't find any working transformers for sale.

What is the possibility of disassembling the transformers and replacing the windings with a modern ones from a disassembled transformer (i.e. one from Hammond)?

Thanks for the advice.

John

For the bad audios: put a .01 mike cap from P to G. If the primary's open, hang a 47K resistor across it. If the secondary's open, put 470K across it. You lose about 10 dB of gain (assuming the usual one-to-three step-up) but modern stations are so much more powerful than "back then" that it's no problem. Use small modern parts, paint them black and they'll be invisible. And the fix is reversible if you find a good transformer.

10497. Trip to Larry Babcock's Home for 2010 WC Auction

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-07-21 19:23:23 UTC
From: Roy Wildermuth
Topic: 10494 Message: 10497

We went to Larry Bacock's house yesterday to sort, pack and tag his items for the upcoming AWA-WC special Auction. I had 1000 tags printed but I thought I was sure I would only need 300 of them at most. Well, we used 585 tags and Jim Kreuzer has yet to tag other items not at the premises. From what I was told, taking into consideration spoiled tags, I would say that this is a 600 item Auction. There are some box lots but most of the stuff is discrete. I am not a collector of this genre, but I do know enough to tell you that there are all sorts of items in all sorts of condition. Some of the stuff looks new and some, well, doesn't. I took about 1 1/2 hours of video which i will be posting to YouTube so everyone can get a good look at what we had to contend with. I would also like to remind you all that we are now over 150 registrations- well ahead of last year. We have sold 48% of last year's spaces and about 25% of all the spaces we have. I think there
is a reasonable possibility that there may be no spaces left by the time the Convention starts, so please pre-register! I,___

It would be *very* helpful to have a full list ahead of time, Roy.

With the extended days for the convention this year, I suspect quite a few attendees may have trouble arriving on Tuesday and staying through the weekend - it means extra time off for those of us who work, and an extra day's hotel charges. Having to drive 360 miles each way from Long Island, it would mean five nights in the hotel for me this year.

With apologies to John Dilks, there's very little on Tuesday evening/all day Wednesday other than the Babcock auction, and unless the auction is a major draw, people may well choose to not arrive until late in the day on Wednesday.

Having the auction listing on line ahead of time (or at least a reasonable detailed description of the items to go with your YouTube video) might tempt more attendees to show up on Tuesday.

The first Video of Tagging the Larry Babcock Collection is now up on the Internet. This is just a two minute light hearted look at the Museum Volunteers and some of the work and a few items, such as the infamous Wurlitzer Piano-Radio. There will be an additional video of a more serious nature up by the weekend. Here is a link to the AWA CONVENTION page which has the video and pictures from the Collection, of which there are over 600 items to be auctioned on August 18. http://www.awamuseum.org/index.php?p=1_50_-BABCOCK-AUCTION

These are seen in the late 20's QST/handbook receiver designs. Placed between the detector and audio amp, in parallel with a capacitor, they supposedly act as an audio peaking filter for some selectable audio frequency for CW work. Yet, I don't understand how a parallel LC shunted from signal path to ground acts as an audio bandpass filter. Just what is the inductance of a Ford ignition coil secondary anyway?

10515. RE: [AWA] Ford coil secondary as audio filter

Yahoo group: antiquewirelessassociation (2010 — 2015)

From: Mike Feher
Topic: 10514 Message: 10515

A parallel circuit at resonance creates an open circuit, or a pole of transmission in the transfer function if placed to ground. If it was placed in series, it would provide a zero, hence a notch. So in this case being across the circuit, at the resonant frequency it passes the signal with minimal attenuation, but, other frequencies are attenuated somewhat (depending on the R of the coil and the impedance of the circuit it is in. Therefore it effectively provides a peaking function. Regards - Mike

From: poconomel
Topic: 10516 Message: 10516

20 years ago I stopped collecting and eventually sold my collection. I kept my greatest love, a Murdoch rotary spark transmitter, a very rare spark key, a working bathtub condenser and a related unusual porcelain radio telegraph sign. My hope was to make a working display in my home (even add an old Tesla coil -- anyone have one?). Divorce. 20 years and several moves later and it still has not been done. I am at a crossroads to either set it up or sell it. I don't feel comfortable setting it up on my own at this point. Is there anyone who lives in or near the Poconos (PA) who can help? I am also placing an ad to sell it in ARC in their September-October issue. Let the universe decide...

10517. McMurdo Silver Masterpiece V speaker

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-07-29 01:59:43 UTC
From: Joseph W. Koester
Topic: 10517 Message: 10517

Hi Folks,

We are trying to determine what the resistance/impedance is for the McMurdo Silver Masterpiece V speaker. This is the big Jensen 18 inch speaker. It has two field windings and it looks like it takes #27 and probably #34 wire. We can create a new form for the coils, and we weighed the old copper, but the difference between #33 and #34 is rather significant. So another factor into the equation would be to measure the two field coils in that speaker, or perhaps consult some documentation we don't have. We do have the schematic and service material, but know what the resistance should be would be a big help.

Thanks,

Joe

Thanks Mike, I understand it now.

I got confused from a webpage that did not clearly describe if the L and C were in parallel or series, vs wether the parallel LC combo was in parallel or series with the signal path.

Your explanation, and a visit to a Rider text cleared it all up.

I decided today to go into Bob's email and see what has been happening. As you probably already know, Bob (N2RIC) passed away April 13th. It was a shock to say the least and I have been struggling with what to do with his items. I have given his HAM things to the local club but a significant amount of what he has they have told me are AWA items, still stored in our home. I would appreciate any help/suggestions from anyone as to where to begin. Like most of you, he has some things that are really nice and other things that only a true wireless guy would see the value in. One thing I know is that he knew what was good, rare etc. and I want to be sure that someone of like interest has the opportunity to have these items. Any guidance will be greatly appreciated. My email is laurah523@... but I will check here as well. Thank you.
Laura Hoppe
p.s. Bob would probably have known the answer to this question.

Subject: Re: [AWA] McMurdo Silver Masterpiece V speaker

My commiserations for your loss.

I would think that, if it's AWA property, AWA holds title and it should go
back to them. I suggest contacting Bruce Roloson as curator,
broloson@... <mailto:broloson@...> or (607) 625-3031.

Ludwell Sibley

I decided today to go into Bob's email and see what has been happening. As
you probably already know, Bob (N2RIC) passed away April 13th. It was a
shock to say the least and I have been struggling with what to do with his
items. I have given his HAM things to the local club but a significant
amount of what he has they have told me are AWA items, still stored in our
home. I would appreciate any help/suggestions from anyone as to where to
begin. Like most of you, he has some things that are really nice and other
things that only a true wireless guy would see the value in. One thing I
know is that he knew what was good, rare etc. and I want to be sure that
someone of like interest has the opportunity to have these items. Any
guidance will be greatly appreciated. My email is laurah523@...
<mailto:laurah523%40yahoo.com> but I will check here as well. Thank you.
Laura Hoppe
p.s. Bob would probably have known the answer to this question.

10525. need help debugging frank jones twinplex regen

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-08-01 04:59:52 UTC
From: kg6adq
Topic: 10525 Message: 10525

Hi all,
I recently built the twinplex regen receiver from a reprint of "The Radio Handbook" of 1936 (reprinted by Lindsay Publications). The schematic is for "Simple Receiver With One Type 19 Tube). It is indeed a simple design. Despite the simplicity, I seem not to be able to get it to work properly. I followed the design very closely, and with an 80 meter coil in, I am able to hear KGO (which is a strong station in the bay area on 810). Moving the tuning around does nothing - the station even comes in when I have the 40M coil in.

I note it is very sensitive to hand capacitance. I used a plastic front panel but behind it is a copper plate, all rotors of variable caps are grounded to it. It also has a reasonable amount of hum, especially when I touch the power switch (its powered on batteries).

When I put my MFJ antenna analyzer near it, I can find the signal on the 80M band and follow it around with the tuning. It appears to have a pretty wide bandwidth, from about 2.5 to 5 MHz. I did hear an SSB qso on 80M when I got my hand in just the right place, but that only happened once.

I tried pulling a turn off the tickler and one off the L1, adjusting the coupling capacitor, different antennas, etc. Nothing seems to help. Anyhow, it is my first homebrew receiver, so I don't have a lot of experience troubleshooting even thought its a pretty simple design. Any ideas about how to get it operating?

Thanks much!
-karl

What are you using for an antenna? Typically, regens don't like lots of antenna. They are pretty sensitive. I had an SW-3 once that operated best with about a 10' hank of wire. Just a thought.

Hi Karl,
 If I recall correctly, Bill, K4JYS (an AWA member) constructed one of these receivers, and experienced a problem, that was due to a schematic diagram error???
 I just looked at my copy of the handbook, and I believe that I see the problem! There should be a connection, that is missing from the schematic diagram, and from the pictoral diagram!!
 The "ground" symbol (located at the junction, of the upper end of L-1, with the tuning capacitor, and bandspread capacitor) should be connected to the left side of the tube filament (at the junction with the 5 megohm grid leak resistor, and the 6 ohm filament rheostat).
  The missing lead would explain the hand capacitance phenomena, and hum that you describe. As shown, the grid of the detector section of the tube, has no DC return!
 If after correcting this problem, you are not able to get the detector to regenerate, try reversing the connections, to L-2, the "tickler" winding. This won't be necessary, however, IF you followed the directions shown, under "coil data", and the pictoral diagram carefully.
 You may find an improvement in performance, and a reduction in hand capacitance issues, if you add a ground connection of some sort, or a counterpoise, at the point where the ground symbol is shown.
 Note also that the gimmick capacitor, in the antenna circuit must be made from twisted together pieces of INSULATED wire. This is a home made capacitor, not a direct connection.
 Feel free to ask for further advice, if needed. I have wanted to throw one of these things together, myself, for some time!

You hit on one point about regen receivers being broad as far as strong signals. I live near a station less then a mile from me. To lessen its broad signal I do change the tickler and antenna tap which does help. Also any regen needs a good ground. I don't know how you grounded your set. A earth ground may not be always the best for it may be not deep enough or to dry. I use both a true copper pipe ground which is a water line in my house along with a good earth ground which I do have a good moist soil where I live. Dave N2TJQ

Hi Karl,
Hi Ron,
Yes. I believe that change/addition in the wiring will do it!
I have the 1936 handbook here and have been checking it out but didn't catch the error. I was trying to find my 1935 edition to check but haven't found it yet.
The grid circuit as shown has a DC path to the filament thru the gridleak resister but no AC ground for the tuned grid circuit back to the tube's filament (cathode). Kind of a floating grid-not a good condition, hihi!
The 1936 edition has a similar circuit next to your's except it uses a pair of 30 tubes with the ground return lead to the positive side of the filament as was usually done for a detector.
The text makes it sound like Jones wanted the detector's grid return to see some negative bias. Maybe because the 19 is a power tube. Any way, Jones had something different in mind for this receiver. Gud luk!

Hi Dewitt,
Hi Karl,
 Thanks for the correction, Dewitt! I was about 3 hours beyond being dead tired, when I composed that note!
 I am not that much better now, but for a different reason, so please beware!
 You may wish to contact Bill, K4JYS cwopr@..., regarding his experiences, with this receiver design, Karl. I'm reasonably certain that his receiver worked quite well, after he discovered the missing wire, which I suspect was the same one that I mentioned.
 Is the filament open on your type "19" tube, Karl?
 You should hear a "plop" as you rotate the regeneration throttle capacitor. (Try this first with no antenna connected)
 The presence of such a plop, or click, indicates that the detector has commenced oscillation, which is the desired result.
 With the antenna attached, you will have to advance the regeneration control futher (more capacitance), to induce oscillation. If the detector does oscillate, without the antenna attached, but fails to oscillate with the antenna attached, it is an indication that the antenna coupling is excessive. Reduce the coupling by reducing the number of twists, in the "gimmick" capacitor.
 Please advise us re your results.
                    GL!! & 73 de Ron n4gjv

Hi everyone,
thank you all for all your helpful comments! I have tried to follow up on a few things.

To clear up a few items, I was using anything from a 15 foot random wire to half my 80Meter dipole. Also tried a 30 ft vertical. Whenever I connected substantial antenna, I got broadcast band and nothing else. I understand now need less antenna.

Regarding the grounding, I have a plastic front panel, but behind it is an 7" x 11" piece of copper sheet, all polished. The capacitors rotors are firmly in contact, but the headphone jack is isolated. Initially, the rheostat arm was isolated from the ground plane, but then I connected it. The radio goes silent when I do this.

There is a single length of wire (about 7 inches) running from a bolt through the front plate to the ground terminal for the antenna. I dont have anything else except one side of L1 attached to it. I dont have the diagram in front of me but I think its one side of L1. L2 is the tickler.

There was another suggestion to couple very lightly to the antenna. I had a 50pF cap in line with the antenna (as suggested in the pictorial diagram) but it seemed to work best whenever it was uncoupled. So, I pulled out the cap and I will put a single loop of #14 magnet wire encircling the top of L1 and connect that to the antenna out. Does this sound OK?

Until tomorrow I cant run any tests because I think I fritzed the 19 when I accidentally caught the B+ on something and I saw a spark. oops. I was trying out different audio transformer and had the battery still connected and a wire got loose. I was a little tired.

Well, I hope I can get it working with all the help. I recently built a TNT from this plan (and a lot of other research) http://members.shaw.ca/ve7sl/tnt.html but I have not been brave enough to power it up yet.

I'll keep you posted.

OK Karl,
FB all very interesting. I found this email address radiobug@embarqmail.com for Bill K4JYS from QRZ. I just rewrote this after I remembered that those old metal rheostats had the center terminal i.e. "the moveable arm" grounded to the case. I have one of them here. It is a Mallory C10P. A small, 10 Ohm three terminal rheostat. Looks just like the one Jones used. This will "ground" the "A negative" filament terminal of the tube socket and the lower end of the grid leak resister to the front panel, the three rotor arms of the condensers and the number "2" end of the coil (cold end). This is most clearly shown in the 1938 edition Radio Handbook (green cover). The text is still a bit confusing to me, however. It is hard to write clear directions for others, hihi. I recommend following the pictorial diagram hookup as it now makes the most sense to me. It is also larger and easier to follow in the '38 handbook. Back in those days, Jones, parts jobbers, and experienced hams would know about the rheostat connection to the panel. A newcomer wouldn't but if he got the right part it would work and never know the difference. I guess Jones thought it was a short-cut not to mention it, hihi! 73, DeWitt N4QNX

> thank you all for all your helpful comments! I have tried to follow up on a few things.
> Regarding the grounding, I have a plastic front panel, but behind it is an 7" x 11" piece of copper sheet, all polished. The capacitors rotors are firmly in contact, but the headphone jack is isolated. Initially, the rheostat arm was isolated from the ground plane, but then I connected it. The radio goes silent when I do this.

I just looked at my copy of the handbook, and I believe that I see the problem! There should be a connection, that is missing from the schematic diagram, and from the pictoral diagram!!
The "ground" symbol (located at the junction, of the upper end of L-1, with the tuning capacitor, and bandspread capacitor) should be connected to the left side of the tube filament (at the junction with the 5 megohm grid leak resistor, and the 6 ohm filament rheostat).
The missing lead would explain the hand capacitance phenomena, and hum that you describe. As shown, the grid of the detector section of the tube, has no DC return!

Hi Karl,
 If I recall correctly, Bill, K4JYS (an AWA member) constructed one of these receivers, and experienced a problem, that was due to a schematic diagram error???
 I just looked at my copy of the handbook, and I believe that I see the problem! There should be a connection, that is missing from the schematic diagram, and from the pictoral diagram!!
 The "ground" symbol (located at the junction, of the upper end of L-1, with the tuning capacitor, and bandspread capacitor) should be connected to the left side of the tube filament (at the junction with the 5 megohm grid leak resistor, and the 6 ohm filament rheostat).
  The missing lead would explain the hand capacitance phenomena, and hum that you describe. As shown, the grid of the detector section of the tube, has no DC return!
 If after correcting this problem, you are not able to get the detector to regenerate, try reversing the connections, to L-2, the "tickler" winding. This won't be necessary, however, IF you followed the directions shown, under "coil data", and the pictoral diagram carefully.
 You may find an improvement in performance, and a reduction in hand capacitance issues, if you add a ground connection of some sort, or a counterpoise, at the point where the ground symbol is shown.
 Note also that the gimmick capacitor, in the antenna circuit must be made from twisted together pieces of INSULATED wire. This is a home made capacitor, not a direct connection.
 Feel free to ask for further advice, if needed. I have wanted to throw one of these things together, myself, for some time!
               GL & 73 de Ron n4gjv

Hi all,
I recently built the twinplex regen receiver from a reprint of "The Radio

Handbook" of 1936 (reprinted by Lindsay Publications). The schematic is for "Simple Receiver With One Type 19 Tube). It is indeed a simple design. Despite the simplicity, I seem not to be able to get it to work properly. I followed the design very closely, and with an 80 meter coil in, I am able to hear KGO (which is a strong station in the bay area on 810). Moving the tuning around does nothing - the station even comes in when I have the 40M coil in.

I note it is very sensitive to hand capacitance. I used a plastic front panel but behind it is a copper plate, all rotors of variable caps are grounded to it. It also has a reasonable amount of hum, especially when I touch the power switch (its powered on batteries).

When I put my MFJ antenna analyzer near it, I can find the signal on the 80M band and follow it around with the tuning. It appears to have a pretty wide bandwidth, from about 2.5 to 5 MHz. I did hear an SSB qso on 80M when I got my hand in just the right place, but that only happened once.

I tried pulling a turn off the tickler and one off the L1, adjusting the coupling capacitor, different antennas, etc. Nothing seems to help. Anyhow, it is my first homebrew receiver, so I don't have a lot of experience troubleshooting even thought its a pretty simple design. Any ideas about how to get it operating?

Thanks much!

Howdy all-

I'm looking for three "ST" shape bulbs:

2ea 6K6G (not the GT)

1ea 6X5G (not the GT)

brand is unimportant as long as the tubes are "good" and in ST envelope. Anyone have some they'd be interested in parting with at say $5 ea?

Any help appreciated.

Many thanks.

Robert

Ed,

Yes, the movie was a bit slow at times (it crashed about half-way through, so I had to sit through the first half again to see the second half).

The rotary converters weigh about 50 lbs each and are rated at about 330 watts at 115VAC output for about 24 amps at 27.5 VDC (660 watts) in. Keeps the operator's feet warm!

In Viet Nam, we rarely used the radios. The AN/GRC-46's TTYs connected to a modem (TH-5/TG) and went out over the phone lines. So we just ran 115VAC into the shelter on an extension cord.

OK, so the saga continues!. I completely tore apart the unit last night and rewired it using the pictorial. I checked each connection as I made it. I measured all the components, and switched out the grid cap as it was off by a little. I powered it up and measured the voltage across the filament - could vary it with the rheostat (with the grounded center arm). So far so good, but no sound! No oscillation - could not pick up anything on my omniV. I noticed in my reprint book (The Radio Handbook 1936) it mentions that the rheostat (mine is a 2 conductor one) is used to provide grid bias. I measured the voltage from the second grid of the 19 to ground and measured about 3 volts when the rheostat was at its lowest position, and the potential decreased as I increased the filament voltage.

Then, I hit the ground wire on a water pipe and blew the second 19. So I am out of commission for a little bit while I think about this (something not right about this rheostat situation). I am going to try to include a few pics so you can see what I was doing although I am not sure if this site will allow me.

OK I posted pics under an album called "karls nonfunctional twinplex"

http://groups.yahoo.com/group/antiquewirelessassociation/photos/album/998434685/pic/list

Thanks to all for the helpful suggestions!

-karl

> > > I recently built the twinplex regen receiver from a reprint of "The Radio Handbook" of 1936 (reprinted by Lindsay Publications). The schematic is for "Simple Receiver With One Type 19 Tube). It is indeed a simple design. Despite the

simplicity, I seem not to be able to get it to work properly. I followed the design very closely, and with an 80 meter coil in, I am able to hear KGO (which is a strong station in the bay area on 810). Moving the tuning around does nothing - the station even comes in when I have the 40M coil in.
> > >
> > > I note it is very sensitive to hand capacitance. I used a plastic front panel but behind it is a copper plate, all rotors of variable caps are grounded to it. It also has a reasonable amount of hum, especially when I touch the power switch (its powered on batteries).
> > >
> > > When I put my MFJ antenna analyzer near it, I can find the signal on the 80M band and follow it around with the tuning. It appears to have a pretty wide bandwidth, from about 2.5 to 5 MHz. I did hear an SSB qso on 80M when I got my hand in just the right place, but that only happened once.
> > >
> > > I tried pulling a turn off the tickler and one off the L1, adjusting the coupling capacitor, different antennas, etc. Nothing seems to help. Anyhow, it is my first homebrew receiver, so I don't have a lot of experience troubleshooting even thought its a pretty simple design. Any ideas about how to get it operating?

Interesting. It appears your antenna wire is not at all connected like the block diagram shows. Maybe it is just the picture, or my eyes, but one side of the loop appears to be open. 73 - Mike

Subject: [AWA] Re: need help debugging franhotmail.k jones twinplex regen

OK, so the saga continues!. I completely tore apart the unit last night and rewired it using the pictorial. I checked each connection as I made it. I measured all the components, and switched out the grid cap as it was off by a little. I powered it up and measured the voltage across the filament - could vary it with the rheostat (with the grounded center arm). So far so good, but no sound! No oscillation - could not pick up anything on my omniV. I noticed in my reprint book (The Radio Handbook 1936) it mentions that the rheostat (mine is a 2 conductor one) is used to provide grid bias. I measured the voltage from the second grid of the 19 to ground and measured about 3 volts when the rheostat was at its lowest position, and the potential decreased as I increased the filament voltage.

Then, I hit the ground wire on a water pipe and blew the second 19. So I am out of commission for a little bit while I think about this (something not right about this rheostat situation). I am going to try to include a few pics so you can see what I was doing although I am not sure if this site will allow me.

OK I posted pics under an album called "karls nonfunctional twinplex"

http://groups.yahoo.com/group/antiquewirelessassociation/photos/album/998434685/pic/list

Thanks to all for the helpful suggestions!

I need driver information on this very rare speaker. There was one of these floating around a while ago which was incorrectly painted black. These are the only two I know of. Can anyony help? The driver should say Cleartone I should think. There is a picture of the black one that was on ebay a while ago in Floyd Paul's book. I would appreciate contact with the person who now owns it. according to the schematic, a loop of wire goes about the one side of L1 and then to antenna out. Thats how I have it. However, in my TNT, the antenna coupler has one end to ground and one end to antenna "center". So, I was wondering which way to do it. Perhaps the schematic omitted the little ground symbol at the bottom end of the antenna loop or "gimmick capacitor".

Ant - loop - Gnd -(right?)

Meanwhile I think I discovered why I blew the second 19. I was using a powered speaker instead of my high impedance headphones because its louder. That unit is a brick amp embedded in a speaker cabinet and run off of AC. The ring of the input is connected to the grounded chassis. Well, the ring of my radio's headphone jack had B+ on it. At the time, my rheostat arm was also connected to ground according to the pictorial which means that the junction between the filament and the 5 meg grid leak is grounded (note that this is opposite to what you see in the schematic where the rheostat arm is connected to A- and to the F- on the transformer). So, then I grounded the ring of the headphone jack to the ground of the radio and poof.

OK, no more powered speakers.

still waiting on my new 19's.

Karl -

Yes one side should be grounded. Also, the loop should be on top of the other turns on the coil form, not that far away. Regards - Mike

Hi Karl,
Stop me next time if I am going into to much detail on my descriptions, hihi! I used to be a college professor.
What you did there with the antenna input is ok for a regenerative receiver input. Jones mentioned doing it like that. It's another way of using light coupling (high impedance coupling) so an antenna's low to medium resistance (it varies a lot with changes in tuning frequency) doesn't load down the receiver's simple input circuitry. No, I don't recommend grounding the free end of your one turn loop you made or that will turn it into low impedance type "Link Coupling"-not good for simple regen sets.

Jones ran a short wire from the L1 grid coil to the antenna post. He said inset a short piece of wire to the antenna post. Then run your insulated antenna lead in and twist together the two wires a few turns. This is light coupling making the so-called gimmick capacitor connection. By now I'll bet you can see that there are number of simple ways to connect the antenna to the set's input. Some of Jones sets show a small trimmer capacitor (3-35 pF) inserted in the lead from the tuning coil L1 #1 terminal to the antenna post. Then you could hook your antenna lead right to the antenna post direct. You would start out with the trimmer capacitance set at minimum then vary the tuning frequency around and adjust the trimmer cap for best signal (it might not matter much really). The goal is to get the set to regenerate over the whole tuning range and not drop out or run into dead spots. Too much coupling on the antenna input (whatever kind you use) might cause the set to drop out of regeneration (oscillation)-not what you want.

73, DeWitt N4QNX

From: Roy Wildermuth
Topic: 1686 Message: 10549

We are in the process of publishing our Flea Market map. At the moment we have a file copy up. But we will be publishing an entire map with spaces marked. You should be receiving you credentials in a few days. On the stub of your ticket your spaces will be listed. You can compare these space numbers to the map and should you wish to change these spaces, we request that you let us know by email. Then when you arrive at the Convention you will have less to do. This year we are marking the spaces that are reserved as of midnight August 15. After that date, it is first come first served ! You still have until August 15 to pre-register. Banquet and Lunch tickets will not be sold at the Convention.

Subject: [Radiomarine] URGENT! The MRHS Needs Your Help!

URGENT!

The MRHS Needs Your Help!

WRC-12 Recommendations May Put KSM Off The Air

Public comments in support of KSM Are Needed

But Time is short - the deadline for comments in 13 August 2010

Here's what's happening:

Every few years an international radio conference is held. The next is the World Radio Conference 2012 (WRC-12). The FCC is the US representative to these conferences.

For WRC-12 the FCC proposes to support recommendations that would make digital data dominant in the maritime service to such an extent that KSM and other stations could be forced off the air.

Here's what you can do:

In a Public Notice the FCC has solicited comments from the public regarding the recommendations to be supported at WRC-12. You can file a comment on line to recommend that KSM and other stations using A1A (Morse code) and NBDP (Narrow Band Direct Printing or RTTY) be allowed to continue operation.

But time is short!

The deadline for filing comments is 13 August 2010.

If you'd like to help keep KSM on the air, follow these steps:

1. Read the FCC Public Notice HERE:

http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-10-1408A1.doc

2. Read the comments the MRHS has filed with the FCC HERE:

http://ddillman.home.igc.org/Radiomarine/Comment.doc

3. File your comment on line in support of KSM. You can do this by uploading a prepared document like the comments the MRHS has filed. Or you can use an on-line form to file brief comments.

The proceeding number is 04-286. To file a prepared document go HERE:

http://fjallfoss.fcc.gov/ecfs/upload/display?z=lg4h3

To file a brief comment go HERE:

http://fjallfoss.fcc.gov/ecfs/hotdocket/list?z=g4v1a

If proceeding number 04-286 is not listed click on the "click here" option to add it.

Suggested text:

If you wish to upload a prepared document like the comments the MRHS has filed we've provided suggested template for your use. Add your own name and address and modify the text to include your own words as needed. The template may be found HERE:

http://fjallfoss.fcc.gov/ecfs/hotdocket/list?z=g4v1a

If you wish to file a brief comment you might use wording similar to this:

"My name is xxx xxxx. I'm writing to support the comments filed by the Maritime Radio Historical Society (MRHS) regarding WRC-12. Specifically, I agree with the MRHS position that the FCC should not support those portions of the recommendations for WRC-12 that would adversely effect MRHS station KSM and other stations in the maritime service."

Full information may also be found on our Web site: http://www.radiomarine.org

Thanks and VY 73,

RD

Hi everyone,
OK I got my new 19 tubes today from Antique Electronic Supply. They were only a little over 5 bucks so I feel good about that (NOS too I think). Anyhow, after lots of discussions with you all and also with Bill Stewart (K4JYS) who built one of these, I made some changes. He confirmed that indeed, the schematic omits a connection from ground to the junction of the rheostat and the gridleak. In addition, the pictorial diagram and schematic dont jive - the pictorial is wrong in that it switches the connections to the rheostat.

I have corrected these two things. However, I did not get any regeneration. But, at least I did not blow up the 19 yet.

OK. Well over the weekend I built AA8V version of the twinplex with a 6SN7 tube. It was pretty easy, no vintage parts, a metal chassis, and I have 5 of those tubes. It worked!!

The design is a little different, but this design calls for a 500 pF capacitor inserted at the junction of the tickler with the RF choke and the other end going to ground. I noted that in the Jones design, this is where the 140 pF variable regeneration control is. I also noted that in another twinplex design (http://www.bignick.net/images/RadioPix/Twin.gif) it has a .001 uF cap in this position. One note said that the radio would not work without it.

To make a long story short, I put in this capacitor in my Jones unit and I got regeneration. I can follow the signal on my Omni V. Right now, 80M is closed here. But I will try later. I have some hope that it is going to work.

stay tuned - no pun intended!

It works!!

One key thing that was not in any of the drawings seemed to be the .001uF capacitor between ground and the side of the tickler that connects to the RF choke. When I removed this, it stopped working.

Thank you all for helping me get this thing going! I really appreciate it. Time to work on a transmitter for it.

10556. debugging frank c. jones twinplex regen

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-08-11 16:13:25 UTC
From: Ron Barlow
Topic: 10556 Message: 10556

Hi Karl,
 Congratulations on your successes!! Using a homebrewed equipment yields infinetely more satisfaction and fun, compared to the other route (IMHO)!
 Yes, that .001 ufd rf bypass cap performs the same duty that the throttle cap (140 uufd?) performed in the other rx. When the cap is absent, you have essentially no regeneration present. In other words, you have just a bare bones grid leak detector.
 The audio level would be higher if a 3 to 1 (or higher ratio) interstage audio xfmr was used to couple the audio between the regen detector and the audio amp stage, instead of the R-C (resistor-capacitor) coupling scheme. The xfmr improves the impedance match, and thus the amount of energy transferred between the stages. However, these xfmrs are not easily found these days, and when found are relatively expensive.
 I put together a regen rx some years ago, using heater cathode type tubes (24A detector, 27 audio amplifier), and also found that the audio level was a bit on the anemic side. I added a second R-C coupled stage, using another 27 triode, which yielded plenty of audio. By the way, Karl, I was using an old pair of 8 ohm "stereo" headphones, with an audio output xfmr scrounged from an old defunct tv set-not the most sensitive set-up around.
                  GL with your xmtr project & 73 de Ron n4gjv

Hi DeWitt and Ron,
it works now!! I cant even believe it. It needed an extra cap of 0.001 uF between the tickler (at the RF choke) and ground to regenerate. When I did this along with the other changes, I got a pretty smooth regeneration and the thing seemed pretty sensitive. The volume in the phones is pretty slight, but still clear.

Thank you both again!!

I will check into joining the AWA.

Talk with you soon,
73
karl

On Tue, Aug 10, 2010 at 4:14 PM, karl schweighofer <kschweig@...> wrote:

Hi DeWitt and Ron,
Good idea about the transformer. I will probably keep using the phones until I get it running, but I will keep that in mind.

I got my new 19 tubes today. So, I am going to do a little testing tonight. First, just with a lamp in the filament - hi hi.

I have exchanged a few emails with K4JYS who built one of these. He had the same problems, and it turned out to be that there is one error in the schematic and one in the pictorial digram. The schematic omits the wire connecting ground to the junctin of the rheo and the gridleak as you all have mentioned. The pictorial has the wiring of the rheo reversed (as I expected).

So, enough to get me going. Meanwhile, over the weekend I built AA8V's twinplex using an 6SN7GT tube - since I have 5 of them! It worked! I found the 470 pF caps to be critical - as I had mistakenly put in 47pF by mistake. The really important one is the one connecting the side of L2 before the RF choke to ground. Interesting that in the Jones twinplex this is replaced by a 140 pF variable (regen control) - I wonder if 140 is enough? I eventually used 500pF in the AA8V model because I didnt have any 470pF. I also followed the light coupling approach in the AA8V and it worked just fine - loop of wire encircling the L1 coil. So, it should work in the Jones.

Anyhow, I will let you know how it goes!

Talk with you all soon,
karl

On Tue, Aug 10, 2010 at 11:15 AM, DeWitt Clay <n4qnx@...> wrote:

Hi Ron,
Karl has some new 19 tubes coming. He let me know (maybe posted it?) that he had
been running the audio (from the headphone jack?) of the set into computer style amplified
speakers and this may have led to the second 19 blowing out thru a ground loop from
the amplifier input jack back to the water pipe ground-circuit breaker box.

Karl, I forget how you were doing the amp connection but a Plate to Line transformer hooked up at the second audio stage plate of the receiver(at the phone jack would be ok) is the best and safest way to couple the audio to an external modern computer amplifier. It will isolate the receiver from the amplifer. Run the 500 Ohm Line side of the transformer to the input mini-plug of the external amplifier.

Hi Karl,

As I understand it you now have a 0.001uF fixed capacitor replacing the 140pF variable "throttle" cap. If this is the case, what is your regeneration control in it's present configuration?

Perhaps the circuit will work as intended if the 140pF throttle condenser is replaced with a 250pF or 350pF air-variable unit. Or maybe, simply a few more turns on the tickler coil will make it percolate with the 140pF throttle.

Earlier this year Bruce W1UJR and I were confounded by an old Doerle regen set that simply refused to "regenerate" or oscillate. I think the problem finally ended up being a poor ground connection - but it was far from obvious.

Greg Hunolt's "Battery Set Compendium," 2010 model, is now available as a free download from the Wisconsin club's site, www.warci.org <http://www.warci.org/> . Follow the link to "Battery Set Compendium" under "Resources," lower left on the home page.

This is a massive searchable data base on mostly-'20s battery radios. It's now up to 1679 (gasp!) companies and 6050 models. I've been using it since the 2007 edition. Quite handy for tracing obscure radios and their makers. A rather powerful service to the antique-electronics community.

It's a 4.5-meg zipped file, so go have a cup of coffee if you're on dial-up.

Ludwell Sibley

Greg Hunolt's "Battery Set Compendium," I have had a version from 2006 which he sent directly to me for our clubs use. Very handy to have too. Lud I have contributed to it also giving Greg several local and regional brandnames that were made in the 20s here in upstate New York. One local company in Albany NY was located in a colorfull neighborhood known for its bawdy houses. It survived for 3 years and then went out of business. The factory building still exists owned by New York State and is used for the goverment viechles and storage. Lud radio was a cottage industry back then like home PCs were in the 1990s. I'm sure that the list will get longer with more names and models. Dave

#1 Hallicrafters S-1 - The First receiver they made (Asking $3800.)
as shown in QST November 2000.
http://www.eht.com/oldradio/arrl/2000-11/index.html

#2 Heathkit AR-1 with cabinet, as shown in QST January 2005
The first Heath amateur receiver. (Asking $900.)
http://p1k.arrl.org/cgi-bin/topdf.cgi?id=713&pub=qst (ARRL members only)

#3 Utah Jr. - the one pictured, (modified - 3 photos going down on
the right side of page.) (Asking $325.) As shown in QST March 2007
http://www.eht.com/oldradio/arrl/2007-03/Utah_jr_transmitter.htm

#4 Mechanical TV, Pioneer Scanning Disk TV, model T-3, exactly like
the ad on this web page.... These are very rare! (Asking $2500.) As
as shown in QST October 2002.
http://www.eht.com/oldradio/arrl/2002-10/early-ham-tv.htm

#5 Lab Tube Tester, like no other you have ever seen (Asking $3800.)
"Daystrom Weston CA-1630 Electron Tube Analyzer", tests every
tube known, even big transmitter tubes. Read the specs here
.... Mine is just like it.
http://www.tubedepot.com/tt-ca-1630.html

#- Selling for a friend (Asking $650)
A DeWald A301 Brown Catalin, Like the one below, but rare "brown catalin"
http://morphyauctions.auctionflex.com/ai2/31120/6506/2318696_2HK0WHGVH.jpg

---> Less expensive items follow ....

#6 Hickok 800A tube tester (red case), Like this one below... (Asking $250)
http://bellsouthpwp.net/p/a/padgett46/laterh.htm

#7 B&K 5" Scope with 1 probe, dual channel, 20 mhz (Asking $110)
no photo

#8 Several Horn Speakers, Magnavox, RCA, & Western Electric Double
Cone (frame only)
Like this one http://www.liveauctioneers.com/item/5847380
RCA
http://www.worthpoint.com/worthopedia/rca-radiola-uz-1325-horn-radio-speaker-ca-1920

#9 A replica of a vintage code (cw) transmitter that used slats from
an orange crate for a chassis, sucker sticks to support the home
wound coil, and Fahnestock clips to connect antenna and key. (Asking
$75.) As shown in QST January 2008.
http://www.eht.com/oldradio/arrl/2008-01/classic-xmtr-kit.htm

#10 A crude original version, sort of like above. (Asking $50) no photo....

See you there, 73, John Dilks, K2TQN

Absolutely amazing, astounding!

I had been looking for a very hard to get item, a power supply amplified for a 1938 Philco 38-690. This is one of two chassis in this high end set which had low production numbers. Within the space of 3 minutes I got two offers of availability, both from London. Two different people, very close address, same phone number, one in a garage and one in a warehouse. Not very sophisticated is it?

--
I am cleaning out my garage and have some ITEAMS to sell. Get back to
me with a list of parts you'll be needing and i'll get back to you
with availability and price or anything you need. What's your phone #

I have mentioned this before, but we really need to make sure all collectors realize that there are people out there who have found a really rare and/or difficult piece we have been searching hunting for years. Sometimes we are so happy to reach for a straw and then we get burned. I won't bother clogging the ethernet with more of these, but it is worth filing away for future reference.

Maybe this sort of thing should be published in journals - Caveat Emptor?

Hi Jim,

I believe those scopes have certain tubes in them that are "hot" items within the tube-audio community.

You may want to check into that before selling them.

10575. 224 tetrode with odd structure

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-08-20 16:16:25 UTC
From: Joe
Topic: 10575 Message: 10575

I found this very odd looking 224 tetrode at the back of an Atwater-Kent model 82.

See the photos and other details at:
http://www.radiomuseum.org/forum/uy224_odd_structure.html
<http://www.radiomuseum.org/forum/uy224_odd_structure.html>

I would like to borrow, rent or buy this tube to do some curve tracing and a few other basic measurements to share publicly.

Does anyone know if this early version of the UY224 tetrode is in the AWA museum collection?

Regards,
-Joe

p.s.: Originally, I got my numbers crossed, referring to the 224 as a 227.

10577. Comments on the AWA 2010 conference...

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-08-20 21:00:52 UTC
From: kd4hsh
Topic: 10577 Message: 10577

Folks,

Just taking a break before the banquet on Friday night . I thought I'd make a few comments on the AWA Conference .

For me, the meet was a resounding success within minutes of arriving Tuesday evening. Geoff Bourne told me that he had found a radio I have been looking for some five years and it was in his van .. Turned out, he was more than right! I have every intention of exhibiting it next year .

Tuesday evening you could preview the Babcock estate items and there certainly seemed to be 1920's items of interest even to advanced collectors Wednesday from 9AM to 4PM Rich Esties auctioned without a break . By the time it was over, about $94k was realized.

It was obvious that the prices realized are down quite a bit from just a few years ago. I was able to pick up a couple of items so came away happy.

Wednesday evening there was a pizza party with 4 piece band in the hotel . At any one time there were 100 or so folks in the room .. They had wanted to have it in the HUGE! Flea market tent but the Henrietta town noise ordinance is reported to have squelched their plans . Still folks seemed to be having a good time.

The tent erected in the back of the flea market was indeed huge and guaranteed that there would not be a rain-out. As it turned out, the weather was pretty close to fantastic

There were good items to be found in the flea market but it was clear that the participation of sellers is low. I would estimate that the good news is that the participation is on an upward trend for the second year in a row ..

There was plenty of time to enjoy lectures during Thursday & Friday .

The contest participation was good with a number of never-before-seen items

As is usual, the Friday flea market fell flat pretty soon and the hard-core buy/sell/traders were packing up after lunch. So more time of socialization and attending the lectures.

Still looking forward to the banquet and the General Auction tomorrow morning . It will be interesting to see how many folks show up here for the Rochester hamfest on the grounds tomorrow . If nothing else, it will be an interesting experience.

By mid afternoon I'll be on my way to an overnight stay in Harrisburg and then the drive back to Monroe on Sunday .

Will I be back? . You bet!

Yours,
Robert

I'm happy to report that John Dilks, K2TQN, has received at Rochester the 2010 Houck Award for Documentation, based heavily on his 11-plus years of monthly "Vintage Radio" columns in "QST." These columns have represented a remarkable range of topics (radio stations, amateur-radio equipment, early radio operators, radio-using expeditions, etc.) and are based on great original research resources.

John got the 2002 Houck Award for Preservation, based on his high-quality collection and his outreach efforts to display it via the Mobile Museum at hamfests and other events. He is the only individual in the 38-year history of these awards to capture them both.

Hello
I need help identifing a radio made by Parker-McCrory mfg Co. Kansas, Mo
It is made on a 6x16x2 1/2 inch chassis.
6 tubes along the back edge. 1st one could be a 22, 32, or 34. A 34 makes it play.
The next 5 are 201A's. the last 2 are in push-pull.
Front left has a 4 gang cap connected to a 4 1/2 inch drum dial with the edge
coming out the front to be turned by your thumb. 0 to 100 cal.
Front right has 3 transformers; 2 interstage and 1 output to a lo impd speaker.
There are 4 coils undernaeth to go with the 4 gang cap.
On the back edge stamped in 1/4 inch yellow is the number 2204 (SN ?).
Front panel has knob with small cap for trim across 1st gang cap,
ON/OFF sw, Knob with variable resistor across 1st transformer sec (vol)
Next to the dial opening is the marking ParMak.
Any one know what this radio is ?

George/W0PPF

The 2010 Members Forum was Video taped again this year. I will attempt to

have the video on YouTube by Monday evening, August 23, 2010.In addition, I

will be putting the forums up as well. These will begin to appear on

Tuesday.

The entire Convention was videotaped this year.

Remember, I am looking for old video or movies from past Conventions.

Hi,

I was in hunter/gatherer mode at the Conference flea market and sometime on Thursday I spaced out and lost some stuff I had bought.

I am missing about about 5 brown ceramic beehives (some were in pretty rough shape), and a globe Taylor 866 mercury vapor tube. They were in a white plastic grocery bag (IIRC). I probably left them on someone's table,
or possibly at the book fair.

It's a long shot, but if any one reading this found them, I will gladly pay for postage to have them sent to me.

10615. Plug In RX Coils - Standard Config?

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-08-29 04:19:59 UTC
From: Bruce W1UJR
Topic: 10615 Message: 10615

Hello all,

I'm in the middle of getting a 1934 regen running, it is based on the 3 tube Doerle A/C set design.
It uses two coils, one in the RF with 4 pins and other other, a 6 pin, in the Detector circuit.
In the information which came with the set, which is based on one of Gernsback's small books, entitled "How To Build 4 Doerle Short Wave Sets", the author suggests not winding your own coils, but rather to use the commercial variety for ease of construction.

The set came with one set of coils, which are wound to match the set wiring.
However, I've got other Bud, ICS and Philmore coils which follow a different scheme.
Let me explain:

On the coils which came with the set, the six pin socket is wired as follows:

Pins 1-6, heater pins, are one coil
Pins 2-3 and 4-5 are two more sets of coils.

On the Bud, ICS and Philmore coils, the pattern in different:
1-2 are one coil
3-4 and 5-6 are another

I'd like to convert the set over to use the more "standard" coil layout, but before I do so, I wanted to check with the group and see what they have found.
Are commercial coils wound on the 1-6, 2-3 and 4-5 layout, or do most follow the 1-2, 3-4, 5-6 design?

So, in summary:

1) Was there any standardization back in the day on plug in commercial coil forms?
2) If so, were the primary, secondary and tickler windings standardized in a particular pin layout?

Thanks for your time and information!

Hello Bruce:
       The way that it sounds to me in your radio the suggestion to use the commercial coils would be easier is that also those two coils could be hand wound which some peopel could do but others could not. Standards were started by that time but only in the early stages. The RMA (radio manufactures ascociation) was formed to get parts standardized. Mainly resistor codes (color bands on resistors, if transformers having a standard kc value, etc. The only thing I can say is as far as the other coil sets you have is do a ohms check on the coils and compare the values which come closest to the two that arein the set. I'm sure you will get other replies with other suggestions too. Dave N2TJQ

10618. Wanted - Schematic for Metrodyne "Special Six"

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-08-29 19:11:17 UTC
From: Larry Szendrei
Topic: 10618 Message: 10618

Hello,

I am looking for a schematic for a Metrodyne Special Six - I have one on my bench I am restoring to operation. Several of the cartridge resistors have very high resistance values - tens or hundreds of megohms - or are altogether open. The highest value of resistor I expect to encounter is the grid leak resistor in the detector, which reads a few megohms and is probably OK (it's adjustable, too).

This is a mid-1920's three-dialer TRF. Note it's a "special Six," not a "Super Six."

Any help appreciated. Could not locate it in Riders Volume I under that name. If I can't locate a schematic with values I'll reverse-engineer it - i.e., trace out my own schematic - and figure out reasonable values. Then I'll tack suitable 1/4 watt resistors onto the underside of the defective cartridges out-of sight.

Thanks,

-Larry/NE1S

Some fine-looking radios on that site!

I don't have enough coils to tell you anything useful, but it looks like an adapter would fix the situation. Some six-pin tube bases are big enough diameter-wise to graciously accept a snap-ring-mount socket.

I've never seen a hint of an industry standard. This wouldn't have been a big enough issue to draw the attention of the RMA or IRE.

10623. Accumulations/Collections:

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-08-30 13:28:36 UTC
From: Joseph W. Koester
Topic: 10623 Message: 10623

Accumulations/Collections:

I saw this discussuion or thread in the Washington Post and these guys were talking about whether their hoards of books were an accumulation or a collection. It is interesting reading and I think most certainly has some parallels in the radio collecting hobby. For some of us it could be a painful realization?

I was recently reading over some of the older threads in the Reading Room--those that have been resurrected during the past couple of weeks--when I came across M12R38's statement that he owned 80,000 books and had acquired most of them from thrift shops and library sales. Now, I knew from long ago that M12 owned a lot of books, and had recently moved them across the country to California. But I don't think that I ever really knew the actual number. Eighty thousand books is a lot of books.

Some might be critical of such an accumulation. Not I. But what I want to know is this: Is it, in fact, an accumulation or a collection? That is, anyone can own a lot of books, but a collection usually has a focus or theme to it, a way of organizing one's purchases. For a collection, one might pay a lot of money for a needed book that isn't in itself very interesting. For an accumulation, one simply buys whatever is of interest.

In this regard, my own library might count as an accumulation of collections. That is, I've got all kinds of books but there are mini-themes and areas of interest within the overall scheme. For instance, in the past I collected books by and about James Joyce (Cathedrals?), Max Beerbohm (Zenith Consoles?), Alexander Pope (Novelty Sets?), P.G. Wodehouse (Catalins?), and several other writers. But I also have a small library of books about occult beliefs, folklore, strange legends, and the like. I own a lot of commonplace books, collections of letters, diaries, and compendia of quotations. In my bedroom I keep the equivalent of a small library of the books I"d like to read and haven't--I keep them there as a reminder of gaps I want to fill in, if I live long enough (To restore and refinsish them!).

So, M12R38--what do you have? An accumulation or a collection? And second, are the books all accessible, on shelves, or are they packed in boxes in a warehouse? Tell us about your storage. I hope other members of the Reading Room will chime in with some comments on their own accumulations/collections and their storage solutions.

Posted by Michael_Dirda

Hello, Dear Host and Mentor!

If I may, I would prefer to describe the set-up as it would appear to you or anyone else who might visit. A building next door to my house, sixty feet long, fifteen and a half wide, and ten feet to the ceiling, has been fitted out with floor-to-ceiling shelving of

the cheapest possible wood. The corridors between them are quite narrow, as I am a quite narrow person so to speak and wished to utilize all possible space in the room. Most of the shelves are full now, done quickly just to get the books out of the packing boxes and onto shelving. Hardly any of it is organized yet . . . but some is: the baseball section, the pop music section, the political philosophy section, and a few others. Now that our hot season is ending here, I'm champing at the bit to get out there and organize!

I DO have certain collections of books: I have a comic art collection (comic books, comic strips, and animated cartoons) which is large (as I think our brother BARQUENTINE's is as well), and books about the history of baseball, and books about the history and types of political philosophies, to name a few. But a huge percentage of the overall volume is of the "accumulation" variety, merely because I rarely see a nonfiction book which doesn't interest me (even dress-making and HARNESSING THE EARTHWORM).

I should add that humidity here is quite low (except for the rainstorms that blow in over the mountains during the summer months), and so adequate ventilation of the books isn't a problem.

In our house I have a room which contains some nice mahogany bookcases and many, many of my better books. (I facetiously call "the smoking room," even though I only smoke one cigar every three months.) There is also shelving (bookcases and otherwise) throughout the house, so it's all working out quite well (which was a relief, as I did know in advance whether or not the space would be sufficient).

There are many reasons not to have so many books, not the least of which is that the moving charges ran to about twenty-five thousand dollars and only included about ninety percent of the library.

Well, as from a pop music hit by DION fifty years ago put it, "Here's my story, it's sad but true."

Regards!

There is a lot more, but you get the idea!

My "collection" of stuff definitely sounds like more of an accumulation, but I'm totally fine with that!

I accumulate what I can afford and what tickles my fancy, and certainly don't consider myself a serious "collector." I leave the museum pieces for others, and have acquired the forlorn neglected sets, parts, and pieces that seem to go begging. Then I don't feel guilty about doing whatever is necessary to "restore" them to operation (and I use the term "restore" loosely). I got into the old radio hobby because of exposure through my grandfather's "accumulation" of old radios, parts, and projects, Gernsback publications from the 1930s and early 1940s, and because one could have so much fun for so little money. The latter reason is also why I'm still crazy about it. (Yes, I qualify as one of those "crazy people" from a different thread...)

73,
-Larry/NE1S

From: Joseph W. Koester
Topic: 10629 Message: 10629

Hi Folks,

I am finishing up a 1938 Zenith Chairside, Model 9S244. This is a shutter dial with motor drive, and is in what is loosely called a Zephyr cabinet. The cabinet has a set of wooden rings or louvers that encircle the three side of the cabinet. I have refinished/restored the cabinet and I only need one more thing to complete the project.

It also has a piece of glass that sits over the dial, and when you want to access the dial you move the glass and it slides down into a vertical slot where it is out of the way. In addition, I think there is a finger slot or hole in the glass that allows you to grasp it and slide it out of the way.

My glass is missing and I would appreciate it one of you happens to have the radio and could give me the exact dimensions of the glass, including thickness, and information on the finger slot or hole. Of course I can measure the opening and get something that will surely work, but I'd be more comfortable with measurements from an original.

Thanks in advance for any information.

Nope, not confused (although possibly in error).

I had specifically heard or read that Reba McEntire was a ham. I knew
that Patty Loveless was a ham, too.

What kind of data bases do the members use to keep track of their collections? All this talk of collections ranging from the low hundreds and on up would indicate some sort or organization to keep a handle of what all you have. I am starting to get swamped.

Does anyone have any suggestions of something good out there before I have to write my own?

Thank you.

From: Leonard Meek
Topic: 10639 Message: 10640

Hi John. Microsoft Excel is a good place to start. List the radio in the first column, model # in the next column, estimated value in the next, etc. I do that for my small collextion, but more importantly, for my tubes & parts. I got a bunch of Xerox boxes and numbered them, and listed the contents of each one one a spread sheet. The tubes, (over 2000) are on a separate spread sheet. The loose tubes are in egg crates and the boxed ones in Xerox boxes, with the antique tubes on 3 shelves in a cabinet. The Excel sort function can be used to organize the list alphabetically, by box number, and/or by location. There are 2 rooms in my little workshop, stacked to the rafters with boxes (on shelves) but I can instantly locate anything on my list without having to open & close a bunch of boxes. I keep one old computer in my shop for this express function. It also has Tube Cad and NTE Semiconductor programs on it so I don't wear out my hard copies looking up basic data. I resisted computers when they first came out but now I'm glad I got into them, even though I'm not yet totally computer literate. Another plus for keeping my inventory this way is the disposing of it after I check out. A friend of mine died recently and left a large unorganized "accumulation" of radios and stuff, and now his kids are trying to humanely dispose of it. The same thing happened to my uncle when he died, but his brother-in-law just loaded everything up and hauled it to the dump. Don't let this happen to you!

Leonard

I use a very simple Excel spread sheet that N3AJB helped me set up. It tracks make, model serial number, date and cost of purchase, estimated resale value, total collection value and a space for comments like where purchased, etc. It works well and couldn't be more simple to use. You can also put things in alphabetical order and other neat options.

Dont lose heart on the love of older sets. I grew up in the boom box era. My love is a Grebe CR5. One day I hope to own one, regardless of its performance. I just love that radio! Its the coolest thing to me. I have a RCA Radiola 18 sitting on my shack desk right now waiting on an antenna. There are those among the young who love old sets. I dispise plastic radios for their cold lack of warmth and comfort of sound. To me they dont smell like a radio. Nothing like hot tubes in a warm wood cabinet. I am accepting donations of a CR5. I have a good home where it will be loved and cared for! 73, Todd

10648. Collection database UPDATE

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-09-04 11:55:23 UTC
From: Captains_Z
Topic: 10648 Message: 10648

Hi All,

Thanks for all the comments of what each of you use for documentation. I had written an Excel spreadsheet for my collections but it is time for something a little more professional.

I've done some additional searching on line and think I've found some FREEWARE that will fit my requirements. It is written by a man in France, so there are French and English versions. He has three databases listed. SmartDB, a general, configurable database, HappyCollections, with some pre-written templates and RadioCollections for the radio collector, in French unfortunately. All of them allow up to 22 data fields to be configured and one can attach multiple pictures to the entry. Setup is a breeze.

Here is the link: http://alainlecomte.free.fr/Download.htm

I will probably use Smart DB and generate a template for my specific needs.

From: Charlie
Topic: 10648 Message: 10649

Fellow collectors,

I do not track my collections on a database, despite the ten of thousands of individual items. I've been collecting for 50+ years. However, I do have an active database to keep track of folks I correspond with.

Prior to my retirement I typically formated excel databases for a variety of purposes. Indeed that is how I gained my familiarity with them. That said, IMHO I stress that a database that will work is an excel spreadsheet or its equivalent in Open Office. Further I note that cost is a factor and commercial products can be pricey as many of us are on a fixed income. I strongly suggest that those with Microsoft operating systems consider Open Office data base, the entire suite. It can be found with a search online and can be downloaded for free. Linux users, especially those using Ubuntu, are already familiar with Open Office... Open Office is compatible with Microsoft Office products.

Remember, at some point you will need to export your data, change an operating system, extract certain data or reconfigure the database. With a specifically written database all those problems could come about.

Best!

Charles

Hi John,

I have a small collection of Ham tags, and an even larger collection of interesting tags. Tennessee's license plates were once shaped like the state, between 1936 and 1956, remember seeing them? I have all but 2 or 3 and I have some Tennessee specialty plates, conservation, agriculture, Smokey mountains, etc. Then Florida specialty plates, and some others from places we have traveled, Alberta, Alaska, Prince Edward Island, etc. They look nice on the wall. I probably have a dozen ham plates from different states, and all this is in the Radio Shack (separate building outside). Kathy has allowed a small collection of plates with birds on them in the sun room.

There is an organization you can check into and join, with modest dues and ham plates are advertised there. It is the Automobile License Plate Collector's association (www.alpca.org) where there is much information.

I am convinced there is someone out there to collect everything. I once found people who collect cigar bands and others that collect the labels off oyster cans! So if you ever think radio collecting is somewhat obscure think again.

Anyone going to Kutztown on Friday and Saturday of week after next? Three of us from TN are going up and will also stop at the MAARC meeting on Sunday on the way home.

73s,

Joe

Hi John,

I have a small collection of Ham tags, and an even larger collection of interesting tags. Tennessee's license plates were once shaped like the state, between 1936 and 1956, remember seeing them? I have all but 2 or 3 and I have some Tennessee specialty plates, conservation, agriculture, Smokey mountains, etc. Then Florida specialty plates, and some others from places we have traveled, Alberta, Alaska, Prince Edward Island, etc. They look nice on the wall. I probably have a dozen ham plates from different states, and all this is in the Radio Shack (separate building outside). Kathy has allowed a small collection of plates with birds on them in the sun room.

There is an organization you can check into and join, with modest dues and ham plates are advertised there. It is the Automobile License Plate Collector's association (www.alpca.org) where there is much information.

I am convinced there is someone out there to collect everything. I once found people who collect cigar bands and others that collect the labels off oyster cans! So if you ever think radio collecting is somewhat obscure think again.

Anyone going to Kutztown on Friday and Saturday of week after next? Three of us from TN are going up and will also stop at the MAARC meeting on Sunday on the way home.

73s,

Joe

Good Morning,

Here in the DC area, we have a huge antique show and sale 4 times a year called "The DC Big Flea." I have seen ham plates there from time to time priced at around $20.00. I have alse seen a few hanging on the walls at Fuddruckers restaurants.

73,

John, W4AWM

There's a guy K0OJ (I think in Colorado) who collects them, or used to.
He asked me to send him one of my obsolete callsign plates, which I did.
This was probably 20 years ago, but I'm pretty sure the guy is still
around. He called himself "O.J."

My "collection" of stuff definitely sounds like more of an accumulation,
but I'm totally fine with that!

I accumulate what I can afford and what tickles my fancy, and certainly
don't consider myself a serious "collector." I leave the museum pieces
for others, and have acquired the forlorn neglected sets, parts, and
pieces that seem to go begging. Then I don't feel guilty about doing
whatever is necessary to "restore" them to operation (and I use the term
"restore" loosely). I got into the old radio hobby because of exposure
through my grandfather's "accumulation" of old radios, parts, and
projects, Gernsback publications from the 1930s and early 1940s, and
because one could have so much fun for so little money. The latter
reason is also why I'm still crazy about it. (Yes, I qualify as one of
those "crazy people" from a different thread...)

73,
-Larry/NE1S

I am looking for any information and history relating to these early 1920's radio companies:

Campbell Electric Co., Lynn, MA (Their venture into radio manufacturing ☐ not medical).
The made at least one pair of models of which 4 or 5 are known.

Clif Manufacturing Co., Brookfield, MA I have a loose coupler and a tuner made by this company.

Maclite Radio and/or battery company of Boston (beyond the information I had in my AWA article which is online.)

Lambert and Chisholm ☐ Boston (or Cambridge), MA (1922). Elaborate boxes, probably never went into production.

Peck Radiofone, 23 Flatbush Ave, Brooklyn N. Y. (anything beyond the information I had in my OTB article) 1922.

Merchants Radio ☐ Kansas City, MO (in business in 1922 only) They made sets similer to the CR8, 9, and matching amps.

QT Light Co (company history) East Orange, NJ

Deitrickson ☐ St. Joseph, MO One 1-tube set known.

Bissell Engineering, New York, NY (near Lincoln Center site) They had one or two ads no pictures. My 1922 set may be the only one.

East Boston Radio Apparatus Co, Boston, MA - one set is known.

Tecla (radio production and spacific models), Detroit, MI.

Radio Specialty, Boston. Two pieces are known.

Boston Scale & Machine, Boston, MA (made scales for the Navy). Several sets are around. Tuner and amp.

Silverset, Cincinnati, OH (Cleartone and/or Faraway connection).

I know this is pretty hopeless but I keep trying.
Some of my photos of this stuff are on my photobucket acct. (mwbancroft) or I can email photos of some of these radios if you are interested and if I have them in my collection..

Thanks.
Merrill Bancroft

Don't know how much detail you're looking for, but several of these companies are listed in Greg Hunolt's Battery Set Compendium, which can be downloaded at http://www.warci.org/BSC.html. He has sources listed that may point you to more detail. It's an excellent source.

Tnx, Ron!

Right now I'm busy trying to wrap up all the outdoors projects while the WX lets me, so still not a lot of time to play radio. I allow myself rainy days (which have been few) and an hour or so most mornings, then I get busy with "that which must be done."

Come November the climate will force me to spend more time inside, which is fine with me!

I did get the Special Six" going. I was unable to find the schematic, but I figured out the 4 resistors that read too high were plate load and grid resistors in 2 stages of resistance-coupled audio, so used 50K for the former and 220K for the latter. The set came to life and I played with it for about a week every night after dusk, pulling in the NYC stations easily and some from farther away (NYC is about 300 miles from here).

Since I already had the power supplies out, I then hooked up and played with another 3-dialer, a Polydyne (aka Freshman Masterpiece) I've had for a number of years, with similar results.

Fun stuff.

73,
-Larry/NE1S

Carl:
I have tried those. Alan had to limit his books to companies that did a minimum numbers of models within a reasonable time. I have always sought radios that were manufactured by companies that produced 1 or 2 models at best and of course Alan couldn't include all the fly-by-night manufacturers,if you will, in his books due to space limitations. I like to research the companies and write about them once I have found a radio or two worth exhibiting at the meets we go to. (Carolina, Michigan, and AWA). Thanks for your suggestion - Alan's books are invaluable in many ways to collecters at any stage of the hobby.

Merrill I know what you are trying to do for I have done the same myself. It is mot a easy task to do. But I sure do enjoy hunting for info on early radios also. Ways that I found info is city libraries going through newspapers (advertisements) telephone books, etc which some libraries have them to look through or on computer files. Also there are many local historians that have info on companies and what they made. Many times I have found the street addresses of the company or what other manufactured items the companies had made besides getting into radio. Merrill I would also like some ohotos of your mentioned radios for the local radio club I belong to. Plus I would like to post them on our clubs website with your permision. Thank you Dave Ellers N2TJQ Schenectady Antique Radio Club

> Merrill I know what you are trying to do for I have done the same myself. It is mot a easy task to do. But I sure do enjoy hunting for info on early radios also. Ways that I found info is city libraries going through newspapers (advertisements) telephone books, etc which some libraries have them to look through or on computer files. Also there are many local historians that have info on companies and what they made. Many times I have found the street addresses of the company or what other manufactured items the companies had made besides getting into radio. Merrill I would also like some ohotos of your mentioned radios for the local radio club I belong to. Plus I would like to post them on our clubs website with your permision. Thank you Dave Ellers N2TJQ Schenectady Antique Radio Club

From: Greg Hunolt
Topic: 10664 Message: 10674

Merrill, Mike and many others,

I very much appreciate Merrill's and Mike's kind words and Merrill's letting me copy a wealth of material that I've used in building the compendium, and I want to thank him and all the others who've contributed information, corrections, additions, etc. As Mike noted, the 2010 edition of the compendium is now available for download and I've begun accumulating a stack of information for this winter's work on the next one.

Greg Hunolt

Hi Mike: I am familier with Greg's compendium. I was able to help with some obscure stuff I have and have also lent him many magazines. I have to admire him for taking on this seemingly endless job which has been needed for a long time. I know he has given up a lot of flea market time while he has copied magazines I brought to meets for him. Now if we can get pictures of everything on that compilation!!
We need to support Greg as much as we can in this project.
Thanks for your reply to my post.
Merrill

10675. Free & highly sought after items!

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-09-14 12:56:26 UTC
From: Joseph W. Koester
Topic: 10675 Message: 10675

Is anyone interested in a quantity of Sams Photofacts?

Joe Zahnen has about 2,000 of them in binders and he would like to find a new home for them. We are going to Kutztown and thought perhaps the Mid-Atlantic Antique Radio Club or the Radio History Society might like them. But the RHS has a set and they don't need any additional and MAARC apparently doesn't need them either. So they are available for the taking.

We were going to take a quantity to Kutztown for transfer, but since the two organizations don't want/need them they are offered up as freebees to anyone. We can still deliver some of these to Kutztown, and the remainder to Charlotte, or you can come to Knoxville and pick up the whole set.

Such an offer!

Let me know if anyone has any interest in this fine collection - the price is right!

Regards,

Joe

10676. Schematic wanted for Buckingham battery set

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-09-14 13:36:01 UTC
From: Larry Szendrei
Topic: 10676 Message: 10676

All,

I am looking for a schematic and battery hook-up info on a mid-1920s battery set manufactured by the Buckingham Radio Corporation. I can not locate any model name or number on the unit.

The set has a simulated wood-grain metal panel and single-dial tuning with a lit filmstrip-style dial, and uses six 4-pin triodes - I assume UX-'01As (3 stages of RF, detector, 2 stages audio). The wiring in my set had been modified, and I traced it out yesterday and corrected some obvious problems, but the battery connections (especially what appears to be C bias battery connections) are ambiguous. I hooked it up to my supplies in a way that made sense to me, but was unsuccessful in receiving any stations. The audio stages appear to be working.

I was unable to locate it in Riders, and Beitman's is too recent. Any assistance is appreciated.

Thanks,
-Larry/NE1S

Joe, I would love to have the binders that cover 200 - 329 and the binder for 161-170. They are all that are missing from my set. I will be at Kutztown. I do have a trailer there so I can take them all if you are looking for space. I will even make a donation to the AWA for them as it will save me a lot of searching.

Sent you an email.

Steve Johnson

10683. A really interesting story.

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-09-17 18:46:56 UTC
From: Todd Carpenter
Topic: 10680 Message: 10683

To me , a historian, this is the essence of today's radio legacy. These brave folks took radio aparatus that most hams would scoff at today and defeated one of the worlds superpowers. Germany was a superpower during WWII. Perhaps not by today's standards, but in the 1930's and 40's Germany nearly dominated the world by herself. Most "agent"radio's ran between a half watt up to twenty watts. Most of them 2 watts or less. Yet using recievers that radiated as well as "modern" HRO superhets, they were the lifeline for struggling Europe. Their equipment's legacies live on in homebrew tinker sets, parasets, ARC5 sets, pixies, 38 specials, K1's, TenTec's, and a numerous host of others all to wonderful to imagine for the low power they are. I hope that Ms. Nearne had a great life as well as all who served, no matter the conflict or country. If you served in WWII, or in any conflict (Falklands too) as a wireless operator I would love to converse with you. This historian is an indirect product of your service, and I personally thank you. Todd

10686. BC342N Question

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-09-18 19:01:36 UTC
From: dadellers
Topic: 10686 Message: 10686

I have a question on the BC342n filliment circuit. On the front of the radio front panel is a fuse marked Dyno-Fill. The fuse is missing. Now does there need to be a fuse in for the tubes filliments to light up even though the set is ac powered? I am in the stages now of having the radio under test and I have good B+ voltages but have no filliment voltages on any tube in the set. Also if this fuse is needed I also need the voltage and amperage of this fuse. Thanks Dave N2TJQ

10687. RE: [AWA] BC342N Question

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-09-18 20:32:10 UTC
From: Ludwell Sibley
Topic: 10686 Message: 10687

Original fuse was 10 amps, 25 volts. Since it protected both the heaters and the dynamotor (it had to withstand the starting current of the latter), you can use something much smaller, exact value depending on how creatively the previous owner hacked up the heater string.

From: Captains_Z
Topic: 10688 Message: 10688

I am restoring a Federal 59 and need some information on the RF transformer, Federal #35. It is open and I want to rewind it or repair it somehow. Does anyone know the turns ratio? The end covers appear to have pins holding it in place. Can these be removed easily w/o ruining the case? If I can remove the coil it might be obvious where the break might be.

Thank you.

John

That's a great video Paul! I don't mind being high but that hieghth NO THANK YOU!!!! You do get from the video at least I did the real sense of being high up. What a view too of seeing 55 miles. I downloaded it and will make a copy nd show the clip at our radio clubs up comming meeting. Thanks Dave N2TJQ

Subject: [Radiomarine] New Episode: Incredible Radio Tales

Another episode of "Incredible Radio Tales" with me, the KWMR Transmitter Wrangler, will be broadcast on KWMR this Thursday, 23 September from 8:30pm to 9:30pm PDT. Those outside the range of KWMR's 90.5 and 89.9Mc signal can listen on line at:

http://www.kwmr.org/

The previous episode of "Incredible Radio Tales" dealt with the mystery and drama of the short waves. This episode deals with the urban hunting and the signals that can be heard in the dark of night in the heart of the city.

The previous episode of "Incredible Radio Tales" may still be heard on line at:

http://www.g4aqg.sussex.ac.uk/IRT.mp3

I hope to be able to post this new episode on line as well.

Regards,

RD

Bing Crosby's 1960 World Series treasure to air in December -- Report
By NewsCore
24 Sep 10|1719GMT

The seventh game of the 1960 World Series, featuring the first walk-off Series-winning home run, will air in its entirety on MLB Network in December, the first time the entire game will be seen since it was played by the victorious Pittsburgh Pirates and the New York Yankees fifty years ago, the New York Times reported Friday.

A near flawless black-and-white kinescope copy of the game, discovered in singer Bing Crosby’s cellar last year, will provide sports enthusiasts with an indelible link between one of history’s most beloved entertainers and one of baseball’s greatest games.

Crosby, who was a minority owner of the Pirates in 1960, was not even in the stands of Forbes Field on the day his club claimed the world championship. The famous crooner was in Paris, nervously listening to the game via shortwave radio.

Crosby hired a company to record the game in kinescope. The result was a five-reel set that captured the entire back-and-forth battle between Pittsburgh and the then-18-time champion New York Yankees.
Even before their championship season, Crosby was instrumental in turning the Pirates from a perennial cellar-dweller in the 1950s into the surprise 1960 National League pennant winners.

Crosby was almost solely responsible for the 1950 signing of eventual Cy Young winner, Vernon Law. Law, one of the first Mormons to play major league baseball, started three games in the 1960 Series, winning Games 1 and 4 for the Pirates. He started Game 7 as well, but was lifted because of an ankle injury.
Crosby’s film, discovered in his San Francisco home, is the only complete copy of the game known to exist. The original NBC broadcast of the Series was destroyed.

The timeless footage has been transferred to DVDs, and Major League Baseball plans to sell copies marking the 50th anniversary of the great contest.

The game itself has long been considered a Major League classic. After the lead had changed three times, the Pirates’ second baseman, Bill Mazeroski, hit a bottom of the ninth, walk-off home run against Ralph Terry, to win the game 10-9 and give the long-struggling Pittsburgh franchise its first World Series title in 35 years.

Crosby claimed he left the country before Game 7 to avoid jinxing his beloved Pirates.

He filed away his 2 hour, 36-minute treasure after watching the game upon his return home.
Crosby was an oft-seen fixture at baseball games in Los Angeles, where he made his home during his years in the spotlight.

10699. "Mystery" Regen Set For 1990s era AWA Conference

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-09-25 17:49:22 UTC
From: Bruce W1UJR
Topic: 10699 Message: 10699

Hello all,

The rest of the items I had in storage in Buffalo for nearly 10 years have arrived in Maine.
I'm busy rooting through what I forgot I packed so many years ago, its like a hamfest, abet this one is inside a metal shipping container.

One of things which I eagerly sought out, and finally found, was a neat little regen set which I picked up at the AWA Conference many years ago.
Over the last few years I'm become increasingly fascinated with regen sets, and fondly remembered packing this one away.
Thankfully it survived the 10 years in storage and the trip to Maine just fine.

Photos at -->> http://gallery.me.com/brucehowes/100587

Back to my question, it was at the Rochester location that I purchased this set, but I can't recall the year, would be between 1995 and 2001, the first year when I got my ham ticket, the last when I moved from NY.
I seem to recall the seller telling me that he bought the set in the AWA Auction the early earlier, but have not found any of my documentation about it, may still be packed away.
I also seem to recall that he might have mentioned Jim Hanlon, and it seems that I spoke with the builder, or exchanged letters with him some time back. Sadly, the rest is lost to history and memory.

If you recognize this set, or it is one of your creations, I'd really like to hear from you.
The set plays wonderfully, very smooth in and out of regeneration, and nice audio into a set of old cans.

Thanks!

Cordially,
Bruce J. Howes W1UJR

Hi Bruce,

There was an old timer who used to build one or two sets each year
and put them in the auction. They sold very well. (I'm not speaking
about Bob Dennison, I'm pretty sure this is not his work.)

Perhaps someone will remember his name? I didn't see him three-years
ago or this year.

Nice radio btw.

Hi Guys:

I attended my Hometown Local Hamfest in London, ONTARIO today and picked up a pair of Great Looking RF TRANSMITTER TUBES......

General Electric GL-892-R 5 KW Forced Air Cooled RF Amplifier and Class B Modulator (Weighs about 25 Pounds at least!!) Used in Commercial AM Broadcast Transmitter.

Western Electric 357-A 350 Watt RF Amplifier (Similar to the RCA 833 Tube.

Does anyone have any comments, War Stories, Info, Rarity Opinions or Value on these 2 Tubes. Not a lot online about them...but I'll keep digging!! Any info or thoughts on them would be appreciated.

Thanks...73 ROB VA3SW

I am trying to determine which transformers are correct for this set. If you have one, could you check and let me know if you haven't already?
The 7 sets that I know of have differences. I realize some have been replaced over time.
There are two in the set and one in the "plug-in amp"
Many thanks.
Merrill Bancroft

From: Greg Hunolt
Topic: 10703 Message: 10704

Merrill,

My SP2 has what was claimed to be an original RF transformer, a small cylinder with mounting screws on the bottom and terminals on the top, and "Radio-Flex" Radio Frequency Transformer on an orange paper label that wraps around it.

The two audios in mine are not original, but when I bought the set it came with one bad (open primary) audio that was claimed to be original, a Saco Clad type 4004 (stamped, no label), cylindrical with terminals on the top. Then I subsequently bought another Saco Clad type 6021, that I was assured was used in the SP2's drop in amplifier.

Best,
Greg Hunolt

Just per chance tonight I came across the paperwork for the regen set I had asked about earlier today.

The builder was Ralph Michelson KF8FA, from Brighton, MI.
I did find an email for Ralph, kg8fa@..., but it bounces.

I would be very interested in speaking with him.
Does anyone know if Ralph is still around, or have another method to contact?

I'll be scanning and posting the images and Ralph's notes on my website in the next few days.

10713. Acquisition of the Radio Club of America

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-10-03 21:04:29 UTC
From: Ludwell Sibley
Topic: 10713 Message: 10713

In the videos of the member meeting at Rochester, there's mention of the Museum having gotten the 100-year archives of the Radio Club. The fifth segment seems to end before the actual meeting ended. Was there any later discussion as to the apparent plan to acquire the Club?

The handwriting is all over the wall on this matter, when AWA knocks itself out to celebrate the other guys' 100th anniversary, makes one of their people the banquet speaker, and gives the Houck Award for Preservation to three of their board members.

An acquisition would profoundly change the AWA culture. The Radio Club these days seems to be heavily composed of cellular / wireless people, presumably good folks but nor necessarily having the same interests as AWA members. The acquirees who are presently at Fellow grade would presumably want to retain that status, a notion foreign to AWA tradition. (Yes, AWA could institute a Fellow grade for its present members but that sounds like more trouble than it's worth.)

This deal may be a good move but that doesn't "jump right out." Any ideas?

Ludwell Sibley

I believe the AWA that we know, and have known for so many years is changing, and the change is happening more quickly as time goes on. There are no doubt many things we don't know about it and the changes and the reason for the changes. From where we sit those changes may or may not look good, but obviously the vantage point somewhat closer is significantly different.

There may be some visionaries there and some forward looking people, but a lot of us want to keep the old AWA as we knew it and I doubt that is ever going to happen. We haven't much say in it so we can hope those who are guiding the ship do the best things I guess.

I liked ARCA and it went away, and I liked ARC and it is going away. They didn't or couldn't keep up with the changes and they fell by the wayside, maybe AWA is struggling not to become irrelevant and that is why they are doing the things they are doing. Change is disruptive as Hell, especially the older we get. I now sound like my parents, and their parents before them.

Subject: [AWA] Acquisition of the Radio Club of America

In the videos of the member meeting at Rochester, there's mention of the Museum having gotten the 100-year archives of the Radio Club. The fifth segment seems to end before the actual meeting ended. Was there any later discussion as to the apparent plan to acquire the Club?

The handwriting is all over the wall on this matter, when AWA knocks itself out to celebrate the other guys' 100th anniversary, makes one of their people the banquet speaker, and gives the Houck Award for Preservation to three of their board members.

An acquisition would profoundly change the AWA culture. The Radio Club these days seems to be heavily composed of cellular / wireless people, presumably good folks but nor necessarily having the same interests as AWA members. The acquirees who are presently at Fellow grade would presumably want to retain that status, a notion foreign to AWA tradition. (Yes, AWA could institute a Fellow grade for its present members but that sounds like more trouble than it's worth.)

This deal may be a good move but that doesn't "jump right out." Any ideas?

Thanks for the all the replies.
He sure built some interesting gear, I found this info on John K2TQN page -->>
http://www.eht.com/oldradio/awa/members/kg8fa/kg8fa.htm

The sad news that I am afraid that our friend KG8FA is a silent key, see the info below which I found from the Social Securtiy
Death Index.
Name: Ralph W. Michelson
Date of Birth: Monday January 19, 1920
Date of Death: Wednesday February 08, 2006
Est. Age at death: 86 years, 20 days

Cordially,
Bruce J. Howes W1UJR

As chairman of the AWA Annual Convention, I asked Carole Perry to be our 2010 Keynote speaker. I am impressed by her use of Amateur Radio as a venue to bring young people into electronics. If you had the chance to see her forums at The Dayton Ham-vention, you would understand. I have rarely had any opportunity to see a group of such talented and motivated young men and women. In an age in which The United States is criticized for allowing their schools to become "dumbed down", this is certainly a very clear rebuttal. Her status as a fellow of the RC of A they feel the same way. If any organization is to succeed, they must be willing to change and they must attract new blood. As I see it, the changes in The AWA reflect this club's willingness to do so. Perhaps a stumble or two, but overall, positive steps in the right direction. The AWA has launched a program to solicit donations of radio equipment and cash to support Carole's work. At the present
time this program is carried on the AWA Convention Web Site. I would invite you to visit it, and hopefully support this worthy program.
The thread subject is incorrect. The AWA has not acquired the RC of A nor is it likely to do so.

From: Ludwell Sibley
Topic: 10713 Message: 10720

I was just asking whether the ongoing lovefest with the RCoA was discussed at the member meeting. Looks like it wasn't.

A perceptive friend of mine independently noticed the effect and termed it a "kissing up." This is really hard to understand: the RCoA exists mainly as a social arm of the wireless industry, having evolved over the years from the Founding Heroes, through the land-mobile set (the "push-to-talk crowd," as one old-timer put it), to the 3G/4G bunch. Respectable people, but hardly a good fit for the AWA culture.

It's still pretty bizarre organizational behavior when a relatively ancient group hands its records over to another club, 350+ miles away. To compound the oddity, the RCoA Web site was claiming, early in the summer, that the archives were to go to the InfoAge Museum in Monmouth County, a lot closer to home. Sorry, Jerseymen! (Or is the center of mass of the RCoA now gone from New York City? The official mailing address is now in Colorado.)

I was not criticizing Carole Perry, her invitation to speak, or her educational program. I'm just curious as to what's going on.

"In other news," the RCoA Web site is offering a centennial DVD containing all their past publications, at $9.95 for RCoA members or $19.95 for others. Could be a good deal.

Incidentally, being a Fellow of the Club isn't that big a deal. Looking at a member directory, it appears that about 40% of them are Fellows.

Surely there's somebody on this reflector with a good understanding of the RCoA and current developments.

Go to www.grillecloth.com <http://www.grillecloth.com/> and click on the "Radio Finder" feature. This invites you to type in the brand name, number of tubes, and four of the tube identifiers. Select the data base(s) that you want it to use (typically the last option, which brings up three data bases). Then hit "submit."

For example, if one types in "Delco," "7" tubes, "24," "35," "35," and "27," it returns model numbers "RB-1" and "RC-1." Now, that's a rigged example because I went to Rider's for a typical Delco, and knew the answer in advance. But it worked.

If you can get a model number, we can talk about a schematic!

John Okolowicz deserves a brisk military salute for building this feature.

10728. Sealing or stabilization of asbetos in old radios

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-10-10 23:39:25 UTC
From: John Ruccolo
Topic: 10724 Message: 10728

Hi Folks,

I'll bet this topic has been covered here before, but I'd like to know the recommended procedure for sealing or somehow "stabilizing" asbestos in old radio cabinets. I recently bought a Westinghouse "column" radio that has a patch of asbestos by the output tubes. I've wondered about this for years, now I need to do something about it.

I'm sure attempting to remove it is probably a *bad* idea. Maybe just paint over it with high-temperature paint?

Any comments and/or suggestions would be welcome.

Thanks and Regards,

John, KC2UAK

Here is my take.... I conserve radios for the next generation not fill them up with new parts just to make them work for a few more years till they break again.

That being the case, I don't want to remove the asbestos (part of the history).... What I do want to do is take reasonable care to insure that the fibers don't get airborne.

What I do is to saturate the asbestos with polyurethane varnish (in place!).... That seems to work just fine to lock down the fibers.... and being a urethane, it ought to do so for many decades to come...

Robert

I agree with Robert: the mission is just to seal the stuff up. I'd think high-temperature paint for car-engine parts would be particularly effective.

I use sodium silicate. Years back it used to be sold as is or often called "Egg Preservative" in hardware stores. Now I find it as gasket cement for wood stoves, a clear liquid. I dilute it about 50% with water and saturate the asbestos with it. When dry the asbestos is encapsulated and is as hard as cement.

I prefer not to use anything that could be flammable when dry to encapsulate the asbestos.

Great idea, Ed. If anyone uses this, just keep in mind that the sodium silicate is a solid, and the liquid you buy is a water solution of the stuff (the old common name for sodium silicate was "water glass"). The water evaporates after it's applied., leaving the glass-like clear sodium silicate material behind. And it's not like paint - the solid will readily re-dissolve in water given the opportunity. So water baths of your radio after this treatment are out!

It's Sylvania production, for the replacement market, of the Sparton-Cardon 182B. Sparton (Sparks-Withington) made, through their tubemaking subsidiary Cardon, a line of unique tubes - nothing revolutionary, but "different." Their most common today is the 485, which is a 27 with three-volt heater (duhhh).

The 182B is basically a 45 with a 5.0-V, 1.25 A filament. It was also numbered 482B. Old-time wisdom had it that one could replace a pair of 182Bs with a pair of 45s, with their filaments wired in series across the 5-volt line. National Union also recommended using a humble 71A as a replacement; it probably wouldn't give as much output, but the availability was better.

Arcturus also second-sourced the 182B / 482B, as did National Union, Perryman, Philco, Speed and Tung-Sol.

Sparton is still around, as a defense contractor in Jackson, MI.

It's Sylvania production, for the replacement market, of the Sparton-Cardon
182B. Sparton (Sparks-Withington) made, through their tubemaking subsidiary
Cardon, a line of unique tubes - nothing revolutionary, but "different." Their most common today is the 485, which is a 27 with three-volt heater (duhhh).

The 182B is basically a 45 with a 5.0-V, 1.25 A filament. It was also numbered 482B. Old-time wisdom had it that one could replace a pair of 182Bs with a pair of 45s, with their filaments wired in series across the 5-volt line. National Union also recommended using a humble 71A as a replacement; it probably wouldn't give as much output, but the availability
was better.

Arcturus also second-sourced the 182B / 482B, as did National Union, Perryman, Philco, Speed and Tung-Sol.

Sparton is still around, as a defense contractor in Jackson, MI.

Does anyone have any info on connecting a Tesla coil to a rotary spark gap transmitter? I have books on how to build a Tesla coil but it deals with modern transformers. Mine is 1KW and very early. Any help would be appreciated.

Thanks,
Mel

10751. RadioFallFest 2010 This Sunday, Oct 17

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-10-16 03:10:10 UTC
From: Paul R. Farmer
Topic: 10751 Message: 10751

Radio Collectors and Historians and Hams,

Don't miss RadioFallFest this Sunday, MAARC's big Fall vintage radio meet at our regular meeting site in Davidsonville, Maryland. This is a vintage radio meet, flea market, and Hamfest, with a huge auction. Gates open at 7AM and the auction will go all afternoon. No admission charge for venders or attendees! See: http://www.maarc.org/

Here are a few of the items that members will be putting in the auction, or in some cases for sale in the flea market:

Scott Philharmonic tuner & amplifierFisher 400 recieverHammarlund SP-600 receiverDynaco ST-70 stereo amplifier1950 Philco 10" TVTransmitting tubesReceiving tubesKnight 50-W novice transmitteFisher FM-100 stereo tunerHallicrafters SX-96 recieverHallicrafters R-42 speakerMarantz Model 2 tube amplifier (2)Marantz Model 5 tube amplifierMarantz Model 9 tube amplfiers (2)Hammarlund HQ-129XEarly 7" Motorola TVSwan SW-240Realistic DX-300Kenwood R1000Meissner Signal ShifterHallicrafters S38ETube testersAtwater Kent Model 40 Silvertone chairside

I am bringing the Silvertone chairside. It is in beautiful cosmetic condition and is working well. It has a large copper dial, 3 bands, a tuning eye, and the most wonderful half-oval shape with original glass top and original grille cloth in perfect shape. This is a rare set in great condition; the only example of this design that I have ever seen.

I am also bringing a 1933 Detrola Model 1000 (the Junior) metal mantel set, also very rare. These were not suppose to be released by Detrola but one or a few must have been rescued by someone in the factory. This is the only example I have ever seen. I am bringing two similar sets by GE/RCA. They display beautifully together. The Detrola won a ribbon in the 2007 RadioActivity Old Equipment Contest. I'll bring the contest documentation too.

I am bringing a British crystal set of fine quality. Also an exceptional condition Hammerlund speaker cabinet.

I am also bringing some high-quality transistor radios and a full stock of new collector books; mostly discounted 10 to 15%. I have recently restocked my entire inventory of new books. So once again I have books that I had run out of, like the Philco and Atwater Kent books, and many others.

The Silvertone chairside, the Detrola 1000, the British crystal set, and the Hammerlund speaker are from my personal collection; so you can be sure of exceptional quality.

Best regards to all, and see you Sunday!

Paul Farmer

Interesting your should ask this, Mel, as I've just embarked on a project to build a spark-excited Tesla coil, and eventually, another one excited by a vacuum tube oscillator.

From what I can see, all that is necessary is to substitute the part of the "transmitting helix" that is part of the primary resonant circuit (i.e., not the part of the helix used exclusively for antenna loading) with the Tesla Coil primary. The bottom of the Tesla coil secondary is grounded. Of course the resonant circuit consisting of the Tesla coil primary and capacitor (in the original secondary circuit of the spark XMTR) needs to be tuned to the same frequency as the Tesla coil secondary, or a subharmonic thereof. I've seen schematics of spark gap transmitters, as well as Tesla coils, with the spark gap across the 60-cycle HV transformer secondary and the series combination of the capacitor and helix/T.C. primary across the spark gap, and also with the positions of the spark gap and condenser swapped with regard to that configuration.

In any case, be careful and don't do anything foolish. For example, if you are drawing a spark to your body while simultaneously there's is a spark from the T.C. secondary terminal to the 60-cycle circuit, you are then connected to the 60-cycle circuit through the sparks, which present a low resistance regardless of frequency. There are, of course, other ways to get into trouble, as I'm sure you're aware.

73,
-Larry/NE1S

10757. "The Transmitter" Magazine?

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-10-19 00:15:51 UTC
From: Bruce W1UJR
Topic: 10757 Message: 10757

I came across a very intriguing publication entitled "The Transmitter"

Wonder if anyone has heard of this publication before?
I have issues Sept 1926 #1 to July 1927 #10.

Interesting publication, like a mini QST, in fact the same form factor
as the early issues of QST, just not quite lengthy.

Published by The Transmitter Publishing Co.
Sub. Floor, Wright Bldg.
Tulsa, OK

L.A. Sims, Editor and Business Mgr. (no call listed)
G.B. Small, Technical Editor (no call listed)

Sept 1926 appears to have been the inaugural issue, not sure when
they stopped publishing.
Standard line up of brand name advertisers one would expect to see in that era,
not quite the range of QST, Cardwell seems to have really been one of the heavy hitters in
the early editions.

Interesting articles, was just reading one on "Lunar Influences On Radio Reception"
in the September 1926 issue!
Really, but then again, all kinds of theories back in the day,
right?

Does this sound familiar with anyone, any info on the background of this company,
this has really gotten me quite interested.

Thanks!

Cordially,
Bruce J. Howes W1UJR

I have the Oct. 1926 issue. It's remarkably QST-like, down to the typography.

"The Transmitter" is not listed in the feature "Dates of Publication: Early U. S. Radio Journals" ("OTB," Feb. 1990 and Feb. 1992).

Thanks for the info Lubwel!

I'd dearly like to be able to scan in each issue to share, but
someone has bound all the issues together with black binding tape.

I hope to be able to share more about this in the AWA Journal's Transmitter column.

Have a great day!

Excuse my typo.

Thanks for checking the Tulsa system Paul!

I'm thinking now that this may have been more of a regional publication, one did not exactly have the internet get the word out back then.
The company did have an interesting offer, sign up 5 friends and you get a free subscription.

We'll keep searching and see what turns up, it may very well be that the issues I have in hand were it.

Thanks for the help all!

Cordially,
Bruce J. Howes

Bruce,

If you can send me a scan of a single page that documents the Tulsa connection, I'll try to interest some library official in Tulsa when I am there sometime in the future. With a solid copy to substantiate the existence of the publication and its relation to Tulsa, maybe someone there will take it on as their personal crusade. (or not)

Anyone following this thread actually live in the Tulsa area?

There is an Oklahoma radio club that often meets in Tulsa but I have never been to their meetings or communicated with them.

Regards,
Paul

10763. Re: [AWA] "The Transmitter" Magazine?

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-10-19 18:19:49 UTC
From: Bruce W1UJR
Topic: 10757 Message: 10763

It would be my pleasure to do that Paul, do you think a digital photo, in high res, would suffice?
I'll shoot the front index section which lists the location and names of the publishers. Given the way its bound, I don't think I could fit it onto my scanner bed, but should be able to
get a nice digital snap.

Lud (know that I know his name) is right, it does look
much like an early issue of QST, right down to the article layout,
even the typefont is a close approximation!

I'll shoot some images this evening, send some off to you Paul,
and put the rest up on my web site.
Once the images are posted, I'll let the group know via email
to this list.

In the meantime, I'm going to enjoy the Sept 1926 article on the effects
of the moon on radio reception! :-)

Cordially,
Bruce J. Howes

From: Paul R. Farmer
Topic: 10757 Message: 10764

Yes, give the photo a try.

Regards,
Paul

Just as an FYI, the AWA Museum library has four issues: volume 1, numbers 1,2,4 and 5. I offer this as an inidication of how rare they might be. 73, /Ed k2mp

This is the best I can do without rigging up something to hold the set on the scanner.
May have to try that tomorrow.
Problem is all 10 issues have been bound together, makes for very placement flat on the scanner glass.

http://gallery.me.com/brucehowes#100610&view=mosaic&sel=0

Cordially,
Bruce J. Howes

Hello,

the Cologne antique radio museum has been burglared and looted.

see

www.askjanfirst.com/iz/RM_KOELN.pdf

for more details and a list of the stolen goods.

as today´s marketplaces make it easy to sell stolen stuff to
collectors worldwide I
considered it reasonable to post this here. Please keep your eyes
open.

Thank you
Jan (www.askjanfirst.com)

10769. Any Info on the Rhode Island Radio School?

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-10-21 00:26:26 UTC
From: aj1g19672007
Topic: 10769 Message: 10769

I recently came across some diplomas from 1952 that belonged to my late father in law from the Rhode Island Radio School in Providence, where he had studied radio and TV repair.

A search on "Rhode Island Radio School" came up with a lot of mentions in obits of guys who went there during the early 50s,but nothing with any additional info. Anyone know any more about it? Did it eventually turn into New England Tech?

An interesting find besides the diplomas was my father in law's small K&E slide rule that he used during the course. When I slid the slide out of it, I found some apparent "crib notes" written in the slot, including the classic one for the resonant frequency of a parallel tuned circuit, and those for inductive and capacitive reactance as a function of frequency!

10770. Vintage Home Brew Tranciever @ ARRL auction (K2TQN Old Radio)

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-10-21 12:15:08 UTC
From: oldradio@comcast.net
Topic: 10770 Message: 10770

Excerpt from John Dilks, K2TQN:

“This is the finest all-mode single sideband transceiver from the 1960's that I have ever seen. It resembles the Collins Radio transceivers in quality of construction and design, and as a homebrew, it rivals any commercially made radio with its aesthetic looks. It might have been lost forever, living on a shelf in a basement of an Electrical Engineer from the University of Illinois. But not this radio……”

Topic: 10774 Message: 10776

Ron,
One more thing. That 1931 "Brunswick" console of yours (if you still have it) is Schweeeet! As you know, it wasn't made by RCA/Generous Electric, but rather Bremer-Tully, "to my knowledge". Brunswick dropped RCA as their supplier, after the consolidation and reorginzation in 1929, when they merged with the "Victor Talking Machine" company of Camden,NJ.

From the pics you have posted, it reallyloos like a Bremer-Tully chassis as well.

Good luck with it's disposition, amd like I said, I wished I lived closer to you.

Very Best Regards,
Joe Cro N3IBX

From: Ludwell Sibley
Topic: 10777 Message: 10777

When Ron posted the link to his photo of a Clough-Brengle amp, it was a surprise to find that this device even existed. (It's not covered in the Rider PA Manual.)

I sent the link to an "amplifier guy" I know, who was similarly surprised, and who pointed out that another amp is currently on eBay at

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem <http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=130445157952&ssPageName=STRK:MEWAX:IT> &item=130445157952&ssPageName=STRK:MEWAX:IT.

He also points out that one of the 2A3s is the "single plate" version, much coveted by the tube-audio people.

Not my sale, etc.

Ludwell Sibley

From: Robert Lozier
Topic: 10782 Message: 10782

Folks,

I need to locate a Free-Play (or knock-off) wind-up radio. It must have the solar cells as well AND a transparent case. Crystal clear is preferred but lightly tinted clear plastic would work also... The important part is that the
mechanism be visible.

Does not have to be in perfect cosmetic condition but the radio has to play on
the wind-up generator. (i.e It's OK if the Ni-Cads are bad.)

I need this to give to a former high school science teacher (in trade for a mint one he has).

Bring it to the meet in Jamestown if you can...

If you haven't been to this meet before, give it a try... The weather is usually beautiful with a chilly start. The gym is there for backup if there is
rain. Even in the down economy there ought to be 20 or more folks with stuff to
sell. BUT get there between 7AM & 8AM... Folks start pulling out after about
10:30AM and the last are gone by 11:30AM.

Yours,
Robert

10789. Bruce Kelly 1929 QSO Party Rules and Info

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-11-09 14:35:00 UTC
From: whitebear1122@comcast.net
Topic: 10789 Message: 10789

It's that time of the year again when 40m and 80m static finally quiets enough to let us hear those beautiful warbles and chirps from our 1929 radios. While I know some of the guys use their 1929 gear all year long, most of us will be dusting the rigs off and setting them up for the December run. Here is the information for the upcoming 1929 QSO Party. I hope to hear and work each and every one of you 29 guys. I will be getting the logsheets up on the AWA website shortly. 73, Scott WA9WFA

The 2010 Bruce Kelley 1929 QSO Party

The Bruce Kelly 1929 QSO Party is a yearly AWA sponsored event where amateurs build their own transmitters using the designs, techniques, and tubes that were available in 1929 and earlier, and then put those classic transmitters on the air and try to contact as many other 1929 stations as possible. Since they use early designs, it is a cancatny of whooping, chirping, buzzing, clicking, drifting, swishing, swaying, worbling, and other interesting signals. This is what ham radio sounded like in 1929. Even if you’re not an amateur radio operator or don’t participate in the QSO Party, you may enjoy listening for the event and hearing those signals for yourself. The 1929 QSO Party was started and championed for many years by Bruce Kelly W2ICE, an AWA founder. Prior to Bruce’s passing, he asked his close friend John Rollins W1FPZ to keep the 29 QSO Party going. John Rollins championed the QSO party for many years and renamed it the Bruce Kelly 1929 QSO Party in honor of Bruce. A few years back John Rollins asked me to take over the 29 QSO Party and keep it going. Bruce Kelly and John Rollins are now Silent Keys and I know both John and Bruce will be with us in spirit.

Dates and Times: First two weekends of December, Saturday Dec 4 through Sunday Dec 5, and Saturday Dec 11 through Sunday Dec 12. Starts at 2300Z (6:00 PM EST) Saturday night and finishes at 2300Z (6:00 PM EST) Sunday night, both weekends.

Objective: Contact as many 1929 stations as possible. Contact exchange consists of RST, Name, QTH (State such as ME or MN or NY), last two digits of the year of the transmitters design or publication (such as 29 or 27 or 23), type of transmitter (such as TNT or TGTP or MOPA or COLPITTS), and power input (such as 6W or 9W).

Rules: Transmitters must be 1929 or earlier types of self oscillators such as the Hartley, TNT, PP tuned grid tuned plate, MOPA, Colpitts, etc. No crystal oscillators. Tubes must have been available during or before 1929. Individual stations can be worked only once on 80 meters and once on 40 meters over the course of two weekends. Contacts count for scoring if made with another 1929 or earlier station. Note this rule change: contacts made with non-AWA visitors with modern equipment who are seeking information about the event may be counted. Log a modern contact with "MOD" or "modern" on the TX column. You can use any vintage or modern receiver that you wish. The event is open to all amateurs operating 1929 style transmitters.

Input Power: Transmitters are limited to a power INPUT of 10 watts or less. However, to help make East-West contacts, power may be increased to 20 watts INPUT between the hours of 0500Z (12 Midnight EST) and 1300Z (8 AM EST). Note this is INPUT power. Power input is

calculated by multiplying PA plate voltage x total PA plate current. Example: my plate voltage is 300 volts dc, and my plate current is 30 ma, so my total input power is 300 x 0.030 = 9 watts input.

Frequencies: The QSO Party operates in both the 80 meter and 40 meter cw bands. The QSO Party typically operates between 3550 to 3580 Kcs and 7040 to 7060 Kcs, plus or minus depending on QRM, cw nets, and RTTY contests.

Logs: Either electronically email your 1929 log to Scott at wa9wfa@comcast.net or via post office mail to: Scott Freeberg WA9WFA, 327 Wildwood Avenue, White Bear Lake MN 55110. Logs must be in the 1929 QSO Party log format otherwise it will be difficult to score you. An official 1929 log sheet will be available for download from the AWA website. For an SASE I will mail you a paper log sheet, and you can I email me for a WORD logsheet.

Scoring: Scoring is simple. Add up the number of QSO’s on 40 meters and 80 meters. Example: if I make 15 QSO’s on 80 meters, and 10 QSO’s on 40 meters, my final score is 25. All submitted AWA logs will be scored and displayed in the results. Please submit logs by January 15, 2011.

Good luck to all participants! Please send me a photo of your 1929 station. Thanks. 73, Scott WA9WFA

Hi Scott,

Thanks for the timely reminder...!

I wonder if there are any newbie participants reading this who are just chomping at the bit, waiting to jump into the fray from the "left coast" in a concerted effort at accomplishing what Steve (VE7SL) did last year...?

His presence on the bands was surely one of the highlights for us Nor'easters in 2009, and was all the more notable by virtue of the fact that it marked (I believe) his first-time effort in the Kelley fray.

Looking forward to it at this end, no matter what...

Larry's services to the radio collecting and restoring community will be a great loss. His work on Philco plastic parts was quite exceptional and absolutely essential for a 1940/41 Philco console restoration. He made parts for me that were beautifully accomplished. Anyone can restore electronics. Few have his skill with plastic replacement parts.

This is very sad news for all.

Best to Larry and his family.

Paul Farmer

10794. Midwest knob needed

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-11-11 21:50:51 UTC
From: Joseph W. Koester
Topic: 10794 Message: 10794

Hi Folks,

I have a Midwest Console, 18 tubes and a typical art deco cabinet, but I am missing the small chrome lever used on many Midwest radios of that era for the band switch. I think it has a small set screw in it. This is all I need to complete this radio which has been refinished and restored. (It only took 20 years to finish this thing and I don't think I have another 20 to go!) If you have one you can part with please let me know.

Many thanks,

Joe Koester, W4NSA

10796. Re: Any Info on the Rhode Island Radio School?

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-11-14 14:59:43 UTC
From: Mark
Topic: 10769 Message: 10796

I'm not sure, but I believe it became "Rhode Island School of Electronics" which I attended in the mid-70s. Sometime later RISE was bought by Johnson and Wales University. If I have some time I'll poke around and see if I can confirm this.

>
> A search on "Rhode Island Radio School" came up with a lot of mentions in obits of guys who went there during the early 50s,but nothing with any additional info. Anyone know any more about it? Did it eventually turn into New England Tech?
>
> An interesting find besides the diplomas was my father in law's small K&E slide rule that he used during the course. When I slid the slide out of it, I found some apparent "crib notes" written in the slot, including the classic one for the resonant frequency of a parallel tuned circuit, and those for inductive and capacitive reactance as a function of frequency!

10797. Photo/Painting - Can You ID This?

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-11-15 00:25:26 UTC
From: Bruce W1UJR
Topic: 10797 Message: 10797

I saw this wonderful framed painting while visiting the New England Museum of Wireless and Steam earlier this year.
It is located at the top of the stairs leading into the room housing the Massie Wireless Station, and is, I assume, some sort of marketing piece.

I do apologize for the poor quality of the photo, the hall was somewhat dark, and the flash really messed things up.

Does anyone have any idea of the origin of this image?

I assume you're referring to the picture of the good-looking woman pointing toward the viewer and operating a key.

I have this image in the form of a color postcard. It is captioned "I HAVE A WIRELESS FOR YOU," with the unrelated slogan "CQD - Come Quick Danger." I used it on the cover of the May 1990 "OTB." Bob Merriam expressed surprise at the time of seeing it in non-painting format.

Ok very good, you guys nailed it!
I had been looking for the origin of that image since
my visit in October! Now, I wonder what the reason was
behind the card. In the lower right of my photo
you can see what looks like "1909 Allen Gillbert".
Any ideas?

I'm with Lou, lovely image, would love to get a high resolution
scan for the ham shack wall.

10806. Wanted Johnson Adventurer - Surrite 200ma Meter

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-11-17 01:43:22 UTC
From: Bruce W1UJR
Topic: 10806 Message: 10806

Hello all!

Working on the 12 year Adventurer project and need a replacement meter.
The factory installed Surrite has an open winding.

I've installed a 300ma meter in its place, but can't really read grid current.
This is a nice clean rig, trying to keep it original, so would like to original
meter to properly fit the hole.

Johnson apparently replaced this meter with a better unit on later
models, but I don't have the specifics.

The unit I have mounts with two screws on the sides and has a gray panel cover.
I can change the scale over, but do need a 200ma unit.

Paying any reasonable price, and most unreasonable ones!

Thanks!

Cordially,
Bruce J. Howes

Joe,

There's this store in a ham's house in Queens that I visited several years ago-- LOTS of radios.

http://www.landaircom.com/index.html

<http://www.landaircom.com/index.html>Let me know if you find any more. I'm from NYC too. Happy Thanksgiving :)

73,
Frank kF2ANK

Hi Joe,

Check out www.infoage.org

The NJ Antique Radio Club has a very nice museum there, plus there are numerous other excellent exhibits there as well.

Regards,

John, KC2UAK

Hi there,
There is a store called 'Waves' on 40w 25th street (http://www.wavesllc.com/). They used to be up on 30th street when I worked in the city 4 years ago but it appears they moved. They restore and sell antique radios, probably one of the last of it's kind in the city.

Hello All,

Restoration is continuing on my RCA 911K console. I am missing the tiny brass contacts and springs that contact the brass wheel at the rear of the set that completes the circuit to energize the motorized tuning. The needed parts are identical on all the 1938 - 1939 "K" sets. Does anyone have a junker "K" chassis available that I can cannibalize?

I know this is a rambling post and I'm not even sure if it makes sense.

Regards,
Ted

Straight Key Night with the Maritime Radio Historical Society:

-----Forwarded Message-----

From: Richard Dillman

Sent: Dec 1, 2010 9:10 PM

To: Radiomarine

Subject: [Radiomarine] Care to Join the MRHS for New Year's Eve?

Care to join the MRHS for New Year's Eve?

By tradition, we participate in Straight Key Night each year by activating amateur station K6KPH.

We also activate KSM to give listeners a chance to copy the station in late evening hours Pacific time.

I'll be at Position 1 primarily conducting KSM operations but making amateur contacts as the workload permits. We would be happy to have other operators on hand to work all the stations that typically call K6KPH.

Position 6 is set up as the main guest position but Position 2 will be available as well. Both positions have the KPH receivers that were in use on the last day of operation of that station as well as a vintage and historically appropriate receiver. See photos below.

Each position can select various receiving antennas including the two V-beams the Transmitter Department has recently restored, one of which is fed with a recently restored run of the original RCA 4-wire. Other receiving antennas include two TCI-530 omnis which are exceptional antennas. Transmitting antennas for 3.5Mc and 7Mc (the bands typically used on SKN) are double extended Zepps. Transmission and reception is usually very good.

Qualifications: Enthusiasm and the ability to send and receive Morse. No license is required so ex-commercial ops without amateur tickets are welcome. And no great speed is required. Straight Key Night is a relaxed affair. But... only straight keys or bugs are permitted. Bring your own or use one of ours. No paddles or electronic allowed. Or, if you'd just like to show up and not operate, you'd be very welcome too!

K6KPH operates like the commercial coast station it's meant to honor. The transmitters are the ex-KPH units on fixed frequencies throttled back to 1.5kW for amateur use. They are located at the Bolinas transmitter site and keyed remotely from the receive site in Point Reyes.

We usually begin sometime around 6pm Pacific time. At 10pm or so we close K6KPH and go to Bolinas to join the Transmitter Department for cake. At midnight the benediction is sent on KSM by Denice if she's ashore and available.

If you would like to join us please let me know in advance so we can prepare for your presence.

Topic: 10842 Message: 10847

For those stations planning on working 40m for the first hour of the QSO Party (40 is excellent at that hour and up until at least 0100Z) there is presently a large RTTY contest underway really messing up the CW segment suggested for our AWA activity. Thankfully the contest ends one hour after ours QSO Party begins so we might have more luck moving up to the 7105-7015 segment which is always much quieter. ...at least for the first hour.

10848. Reminder of the Bruce Kelly 1929 QSO Party

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-12-04 04:14:35 UTC
From: whitebear1122@comcast.net
Topic: 10845 Message: 10848

It's that time of the year again when 40m and 80m static finally quiets enough to let us hear those beautiful warbles and chirps from our 1929 radios. While I know some of the guys use their 1929 gear all year long, most of us will be dusting the rigs off and setting them up for the December run. Here is the information for the upcoming 1929 QSO Party. I hope to hear and work each and every one of you 29 guys. Logsheets and rules are up on the AWA website now. 73, Scott WA9WFA

The 2010 Bruce Kelley 1929 QSO Party

The Bruce Kelly 1929 QSO Party is a yearly AWA sponsored event where amateurs build their own transmitters using the designs, techniques, and tubes that were available in 1929 and earlier, and then put those classic transmitters on the air and try to contact as many other 1929 stations as possible. Since they use early designs, it is a cancatny of whooping, chirping, buzzing, clicking, drifting, swishing, swaying, worbling, and other interesting signals. This is what ham radio sounded like in 1929. Even if you’re not an amateur radio operator or don’t participate in the QSO Party, you may enjoy listening for the event and hearing those signals for yourself. The 1929 QSO Party was started and championed for many years by Bruce Kelly W2ICE, an AWA founder. Prior to Bruce’s passing, he asked his close friend John Rollins W1FPZ to keep the 29 QSO Party going. John Rollins championed the QSO party for many years and renamed it the Bruce Kelly 1929 QSO Party in honor of Bruce. A few years back John Rollins asked me to take over the 29 QSO Party and keep it going. Bruce Kelly and John Rollins are now Silent Keys and I know both John and Bruce will be with us in spirit.

Dates and Times: First two weekends of December, Saturday Dec 4 through Sunday Dec 5, and Saturday Dec 11 through Sunday Dec 12. Starts at 2300Z (6:00 PM EST) Saturday night and finishes at 2300Z (6:00 PM EST) Sunday night, both weekends.

Objective: Contact as many 1929 stations as possible. Contact exchange consists of RST, Name, QTH (State such as ME or MN or NY), last two digits of the year of the transmitters design or publication (such as 29 or 27 or 23), type of transmitter (such as TNT or TGTP or MOPA or COLPITTS), and power input (such as 6W or 9W).

Rules: Transmitters must be 1929 or earlier types of self oscillators such as the Hartley, TNT, PP tuned grid tuned plate, MOPA, Colpitts, etc. No crystal oscillators. Tubes must have been available during or before 1929. Individual stations can be worked only once on 80 meters and once on 40 meters over the course of two weekends. Contacts count for scoring if made with another 1929 or earlier station. Note this rule change: contacts made with non-AWA visitors with modern equipment who are seeking information about the event may be counted. Log a modern contact with "MOD" or "modern" on the TX column. You can use any vintage or modern receiver that you wish. The event is open to all amateurs operating 1929 style transmitters.

Input Power: Transmitters are limited to a power INPUT of 10 watts or less. However, to help make East-West contacts, power may be increased to 20 watts INPUT between the hours of 0500Z (12 Midnight EST) and 1300Z (8 AM EST). Note this is INPUT power. Power input is

calculated by multiplying PA plate voltage x total PA plate current. Example: my plate voltage is 300 volts dc, and my plate current is 30 ma, so my total input power is 300 x 0.030 = 9 watts input.

Frequencies: The QSO Party operates in both the 80 meter and 40 meter cw bands. The QSO Party typically operates between 3550 to 3580 Kcs and 7040 to 7060 Kcs, plus or minus depending on QRM, cw nets, and RTTY contests.

Logs: Either electronically email your 1929 log to Scott at wa9wfa@... or via post office mail to: Scott Freeberg WA9WFA, 327 Wildwood Avenue, White Bear Lake MN 55110. Logs must be in the 1929 QSO Party log format otherwise it will be difficult to score you. An official 1929 log sheet will be available for download from the AWA website. For an SASE I will mail you a paper log sheet, and you can I email me for a WORD logsheet.

Scoring: Scoring is simple. Add up the number of QSO’s on 40 meters and 80 meters. Example: if I make 15 QSO’s on 80 meters, and 10 QSO’s on 40 meters, my final score is 25. All submitted AWA logs will be scored and displayed in the results. Please submit logs by January 15, 2011.

Good luck to all participants! Please send me a photo of your 1929 station. Thanks. 73, Scott WA9WFA

Hi All, I am working on a Magnutrol three dialer TRF made by Magnus Electric Company in 1925. I can find no information on the set anywhere and need a schematic. Someone has worked on it in the past and the wiring is all wrong. Can anyone help?

Thank you.
John

10853. 1929 QSO Party Observations

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-12-06 19:58:52 UTC
From: whitebear1122@comcast.net
Topic: 10853 Message: 10853

I had the nearly all of the weekend reserved for the 1929 QSO Party, only missing the first hour of the event when running to get Chinese carryout at the request of my wife and daughter just as the event was starting. hi hi I had the woodstove stoked up and the basement shack nice and toasty as it was bitterly cold and snowy outside.

I better post my comments on the the first weekend results before I forget or confuse them with 2nd weekend comments.

1. Heard several new callsigns working the event, maybe heard/worked 4 or 5 new guys. Great! I think it's important to 'grow 1929 stations' by talking up the 1929 transmitters and encouraging new people to try it out. One Mid west station, KB0ROB, is instrumental in getting many midwestern stations on the air through motivation, talking it up, supplying parts, advice, etc.

2. 40 meters rocked Sunday afternoon with more stations working 40m than I heard in the past. 80m is dead early Sunday afternoons so I wish more of the gang would move to 40m!

3. The universe is in balance as I heard KB0ROB and WA3FFC calling AWA in the wee hours of the night. It used to be W2ZM, KB0ROB, and WA3FFC in past years. I generally use FFC as my East Coast propagation indicator.

4. Thank goodness for a large mid-west contingent because our East Coast friends were hard to hear. I worked a couple guys out east but propagation wasn't good at my place anyway.

5. I was pleased to work some western stations including VE7SL, KK7UV (I don't quite remember the call), and K4JYS in NM. I heard someone else mentioning working Bud W7LNG but I didn't hear him. I've heard there are other West Coasters in the event too. Who from the west coast is participating?

6. Saturday night 80 was abuzz with signals, maybe more than I've heard before at one time. I wasn't bothered by any RTTY qrm for once. And once the cw nets conclude, the band was pretty much ours. I picked up a few more stations Sunday morning on 80m, more of the midwest guys, no East Coast.

7. It was interesting to note changes in propagation over time. Saturday night I picked up some of the local guys and a half hour later they simply disappeared as the band went long and I never heard them again that night. Sunday morning I worked some more and the band dropped out around 10 AM. Around 3:30 80m started waking up again. The locals were screaming in louder than ever. Around 4:30 I actually heard some East Coasters coming through for about 15 minutes before that propagation "channelling" disappeared. I heard NE1S and W1GIG, I called several times but no luck.

8. I did work all the Canucks at least once including VE7SL, VE3AWA, and the elusive VE3XZ so I guess I've "Worked All VE". Are there other Canadian stations that I need to seek out?

9. I had a couple of guys QSO me to ask what was going on. One guy surprised me because he came back to my "AWA AWA AWA de WA9WFA" call with a signal that was mighty 1929. When he didn't give me a report I quizzed him about the event, no he wasn't in the event but was just curious about it. I didn't ask him why his signal sounded so awful :) an unstable signal sounds great on a 1929 rig, sounds like crap on a rice box... har har

10. Heard lots of wonderfully 1929 signals. I'm trying to remember who was the buzzsaw this year. I think N8YE was the one with the raw ac sounding signal. Heard lots of wind modulated signals which in my opinion is one of the most beautiful sounding 1929 signals. Heard alot of chirpers, some slightly chirpy, some extra chirpy. Heard one 29 station that sounded more like two signals together. It's hard to explain but I didn't hear just one tone, but two tones separated by maybe 100-150 hz. It was cool.

11. For you guys that worked me, what did my push pull Colpitts sound like on 80m and 40m? While I can never be sure of my own signal since the receiver is 2' away from the transmitter, it did sound like I had some wind modulation on my signal. Plus it sounds like my frequency is jumping abruptly a bit on 40m. I set the frequency counter nearby to look for that jumping behavior.

12. I was running the 210 push-pull Colpitts duo banded for 80m and 40m. 40m was a little less stable than 80m but it seemed ok at least on my end.

13. One observation: I heard alot of guys using MOPA's this year. Some of the MOPA's were plenty chirpy too. I've come to the conclusion that single stage transmitters can be made to run an incredibly stable signal, and MOPA's can be made to run chirpy and unstable.

14. One of the more beautiful albeit somehwat chirpy signals was W0CWU's MOPA.

I saw Eddy's comments that he'll be back next Saturday night in full force. Good. I need to pick him up on both bands. Ditto for VE3AWA and VE7SL as well.

Gads what a grand time the 1929 QSO Party is!! I was a pleasure working all of you!

73, Scott WA9WFA

I was on 40M Saturday morning for a while, but had to quit around
11:30AM local and when I started back up around 3:30PM, I went back to
80M as I heard no AWA signals on 40M then. Sounds like I missed out on
some of the best time to be on 40M, drat.

Sorry Scott; I didn't hear you calling and would have loved to work you!
QRN on 80M was wicked here. If it makes you feel any better, I tried
unsuccessfully to raise W1GIG as well.

?? This last statement conflicts with observation #8.

I worked Eddy (VE3XZ, not to be confused with VE3CUI) on 80M, VE7SL on
40M, and VE3AWA on both bands.

73, Scott, and hoping to work you on both bands next weekend!

-Larry/NE1S

Scott - it was great to read your summary as well as Larry's. Hopefully others will post their thoughts and observations as well.

I started out on 40m (it is still an hour before sunset out west when the Party begins) and managed just three QSO's but working Larry, NE1S, was very gratifying. I am truly impressed with the operating skills of all of the '29 participants as they seem to be able to copy the feeblest of signals and never ask for repeats! With the RTTY contest in full-swing for the first hour of our affair, the normal suggested operating frequencies for 40m are pretty much useless and all three of my contatcs were up in the little-used and much friendlier 7.120 region...the old Novice band. Perhaps we should seriously look at making this the suggested 40m 'watering hole' for future '29 Parties?

Off to 80m after the first hour and after waiting for the sun to go down, things started to come to life. Overall I found condx to be good but not quite as good as last year's superb propagation. As usual, the wind started to pick up right at contest time but I had added another tie-down to my 40 and 80m wire verticals and they were both stretched as tight as a banjo string. I built this last year in case of wind and it saved the day for me. It consists of some homebrew 4" ladder line made from dollar-store plastic coathangers and four ground radials for each band.
The top end was shot up to the top of a 75' Fir using my antenna-wire spud gun.

http://members.shaw.ca/ve7sl/verticals

After a few hours, the wind abated and things got back to normal. I heard several 'windy' signals during the contest as well. It was great to work some new blood or at least guys that I did not work last year. Absent (at least I didn't hear them) were N9OO, W0LS, W0CWU, W0NYQ, WU2D, N9CQX, W3GMS, N4GJV, K0PK,WA9QNN, W2AO and W1TSP. My apologies if they were on the air and just 'not heard' back here. Heard but not worked were: W8KGI (on 40m), W2CQH, W1GIG, W1ZB, K1GDH, K8MB, WB2QMY (he QSL'd my report but I couldn't pull him through...2 watts input) and AG2M....maybe next weeekend??

Best DX of the affair for me was working VE3AWA,WA3FFC, K4JYS, WA1JAS, W2LB (5W!), K1TMJ, W3FJJ on 80m plus the big crowd from MN...must be something in the
water there that breeds '29 activity?

Of my 22 QSO's, fully 7 were using Hartleys, 7 using MOPAs and 3 were using TNTs...with the remainder using TPTG's or Colpitts oscillators. For the first few hours, whenever I heard N8YE, his tone was pure a.c. and virtually impossible to copy at the strength of his signal. He must have done some tweaking as when we worked later in the evening, he actually had some tone

to his note, making copy much easier.

Some of the signals were exceptionally strong, given the power being used. WA1JAS (8W) actually peaked to S7 on the S-meter during our QSO and Scott, WA9WFA,
was over S9 briefly, just around his sunrise time. It really is amazing what a little
favorable propagation will do with a miniscule amount of RF on 80m.

I hope to spend a little more time on 40m next weekend at the start....but where will the activity be...
7050 or 7.110 ? I see there are two digital contests messing-up our 40m window again next
weekend but unlike last week, these ones will not stop after the first hour. I would suggest everyone look up in the 7.110-7.120 region for starters.

>and WA3FFC in past years. I generally use FFC as my East Coast propagation
>indicator.

he must have a great antenna as he was the east-coast beacon signal here all night long.

>I've heard there are
other West Coasters in the event too. Who from the west coast is
participating?

You have most of them...KK7UV (MT), myself, W7LNG (OR). I heard that W7DRA (WA) was on with a pair of 211's but I didn't hear him at all. I think he was way down at the low end and not tuning high enough to find the AWA activity. He will correct this for next weekend apparently...his Command set rx's are difficult to tune as well. Also, W7OIL (WA) will hopefully be on with his delightful 'Double-M', a unity-coupled come TNT at around 2 watts.

>Are there other Canadian
stations that I need to seek out?

you got all of them....WAVE award is on the way :-)

>Heard one 29 station that sounded more
like two signals together. It's hard to explain but I didn't hear just one tone, but two tones separated by maybe 100-150 hz. It was cool.

this is exactly the way I described KK7UV's note to him...was it him by chance?

> For you guys that worked me, what did my push pull Colpitts sound like
on 80m and 40m?

it sounded great once it decided what frequency it wanted to settle on....when you called me, it jumped from my frequency, up 2 kHz and stayed there for the remainder...and you were darn loud. I heard you again about 20 minutes later and your signal was barely copyable...after sunrise perhaps?

Note that VE3XZ=VE3CUI in case anyone thought that they missed Eddy.

>Gads what a grand time the 1929 QSO Party is!! I was a pleasure working all
of you!

I agree...too bad it's just once a year ...hhhmmmm ;-)

Subject: [AWA] Re: [AWA Group] 1929 QSO Party Observations

Scott - it was great to read your summary as well as Larry's. Hopefully
others will post their thoughts and observations as well.

WA9WFA: yes I hope more folks post their experiences on here. It is enjoyable hearing other folks experiences and observations from their qth.

I started out on 40m (it is still an hour before sunset out west when the
Party begins) and managed just three QSO's but working Larry, NE1S, was very
gratifying. I am truly impressed with the operating skills of all of the '29
participants as they seem to be able to copy the feeblest of signals
and never ask for repeats! With the RTTY contest in full-swing for the first
hour of our affair, the normal suggested operating frequencies for 40m are
pretty much useless and all three of my contatcs were up in the little-used
and much friendlier 7.120 region...the old Novice band. Perhaps we should
seriously look at making this the suggested 40m 'watering hole' for future
'29 Parties?
WA9WFA: Steve mentions making three contacts in the quiet space above 7100. I recalled that the first 25 KHz above 7100 was still Novice/Tech so I took a listen up there. Man, what a nice quiet space compared to the nut house on 40m between the high power cw, Canadian SSB, and digital and RTTY contesting. Steve's thought about using that space above 7100 for an additional watering hole is a good one. We should certainly consider that for next year. Next week I'm thinking of popping up there from time to time to see if there is any 29 activity up there. Often during the afternoon 40m becomes the perfect storm of cw, ssb, rtty, digital, and holy moly it's impossible to find a spot to operate. I've used my 500 hz filter more than I've ever used it before. Normally I hate listening to cw via a tight filter like that but so many times I would switch in the 2.5 Khz filter only to discover one or two S-9 non contesting stations on the frequency. Love that 500 hz filter more and more now.

Agree that 29'er seem to be able to work magic and pull peanut whistle signals out of the noise. While many of the QSO's are more arm chair copy, meaning S-3 to S-4, many are nail biters and can be stressful when the headphone volume is cranked up, filter cranked down, mental processing working overtime trying to hear a signal that is just a skosh above the noise level.

Off to 80m after the first hour and after waiting for the sun to go down,
things started to come to life. Overall I found condx to be good but not

quite as good as last year's superb propagation. As usual, the wind started to pick up right at contest time but I had added another tie-down to my 40 and 80m wire verticals and they were both stretched as tight as a banjo string. I built this last year in case of wind and it saved the day for me. It consists of some homebrew 4" ladder line made from dollar-store plastic coathangers and four ground radials for each band.
The top end was shot up to the top of a 75' Fir using my antenna-wire spud gun.

http://members.shaw.ca/ve7sl/verticals

After a few hours, the wind abated and things got back to normal. I heard several 'windy' signals during the contest as well. It was great to work some new blood or at least guys that I did not work last year. Absent (at least I didn't hear them) were N9OO, W0LS, W0CWU, W0NYQ, WU2D, N9CQX, W3GMS, N4GJV, K0PK,WA9QNN, W2AO and W1TSP. My apologies if they were on the air and just 'not heard' back here. Heard but not worked were: W8KGI (on 40m), W2CQH, W1GIG, W1ZB, K1GDH, K8MB, WB2QMY (he QSL'd my report but I couldn't pull him through...2 watts input) and AG2M....maybe next weeekend??

WA9WFA: Yeah I didn't hear most of those guys either but I did work W0CWU and W0NYQ . W0NYQ made 2 contacts and had to shut the station down due to a last minute business trip. Hopefully the other guys will be around next weekend.

I did hear NE1S, W1GIG, W1ZB too but all to briefly. Like I mentioned earlier, I did hear W1GIG and NE1S in a brief 15 minute window on 80m just before closing time. Wonder where the propagation was Saturday night.

Best DX of the affair for me was working VE3AWA,WA3FFC, K4JYS, WA1JAS, W2LB (5W!), K1TMJ, W3FJJ on 80m plus the big crowd from MN...must be something in the
water there that breeds '29 activity?

WA9WFA: Wow, impressive working coast to coast like that! Yes the MN crowd is big. Last year I think I worked some 12 or 14 stations in MN. Some of what breeds it is KB0ROB who is ever the 29 champion to newbies, plus there is a group of OT retired guys that get on every morning and chit chat. I try to get in with them on Saturdays as I'm still a working slob. In that group is KB0ROB, W0CWU, W0NYQ, K0KCY, WB9WHG, occasionally W0LGU, once in the blue moon KB0MM, so it's easy to steer these guys to 29 talk. Some Saturdays we might talk 29 stuff for 2 hours in a roundtable.

Of my 22 QSO's, fully 7 were using Hartleys, 7 using MOPAs and 3 were using TNTs...with the remainder using TPTG's or Colpitts oscillators. For the first few hours, whenever I heard N8YE, his tone was pure a.c. and virtually impossible to copy at the strength of his signal. He must have done some tweaking as when we worked later in the evening, he actually had some tone to his note, making copy much easier.

WA9WFA: John Rollins remarked to me once that he was suprised (maybe read disappointed) with the number of MOPA's that were appearing in favor of the older single stage transmitters. At the time I was running my 80 meter MOPA. I'm now running a duo banded single stage push pull Colpitts from a design I got from VE3CUI. Maybe this coming year

I'll finally get around to finishing off a 40 meter 211 single stage Colpitts. Just before John passed away, he was building a 40m Colpitts for me. I didn't know about it at the time. Hewas going to surprise me with it. From what I was told by KB0ROB, who used to talk with John on a weekly basis, and Tim Walker, John asked Tim to mail it to me just before he passed away. It's a beauty, consisting of the LC tank circuit, plus all the parts to build it. John put a yellow sticky note around each component and marked it with it's place in the circuit. So I'm thinking that I need to finish building Johns Colpitts and run that on 40m.

Some of the signals were exceptionally strong, given the power being used.
WA1JAS (8W) actually peaked to S7 on the S-meter during our QSO and Scott,
WA9WFA,
was over S9 briefly, just around his sunrise time. It really is amazing what
a little
favorable propagation will do with a miniscule amount of RF on 80m.

I hope to spend a little more time on 40m next weekend at the start....but
where will the activity be...
7050 or 7.110 ? I see there are two digital contests messing-up our 40m
window again next
weekend but unlike last week, these ones will not stop after the first hour.
I would suggest everyone look up in the 7.110-7.120 region for starters.

WA9WFA: Well I am going to work 7040 to 7050 as usual but I will start listening up in the 7110 range. If I hear anything up there I'm going to work 'em.

>and WA3FFC in past years. I generally use FFC as my East Coast propagation
>indicator.

he must have a great antenna as he was the east-coast beacon signal here all
night long.

WA9WFA: Yeah, Scott FFC must be running 10,000 watts. Last year a family illness prevented him from working the whole event. He made maybe 9 contacts. I'm happy to hear him back in there like the old days.

>I've heard there are
other West Coasters in the event too. Who from the west coast is
participating?

You have most of them...KK7UV (MT), myself, W7LNG (OR). I heard that W7DRA
(WA) was on with a pair of 211's but I didn't hear him at all. I think he
was way down at the low end and not tuning high enough to find the AWA
activity. He will correct this for next weekend apparently...his Command set
rx's are difficult to tune as well. Also, W7OIL (WA) will hopefully be on
with his delightful 'Double-M', a unity-coupled come TNT at around 2 watts.

WA9WFA: Good. It's be fun to work some more of the West Coast.
>Are there other Canadian
stations that I need to seek out?

you got all of them....WAVE award is on the way :-)

>Heard one 29 station that sounded more
like two signals together. It's hard to explain but I didn't hear just one
tone, but two tones separated by maybe 100-150 hz. It was cool.

this is exactly the way I described KK7UV's note to him...was it him by
chance?

> For you guys that worked me, what did my push pull Colpitts sound like
on 80m and 40m?

it sounded great once it decided what frequency it wanted to settle
on....when you called me, it jumped from my frequency, up 2 kHz and stayed
there for the remainder...and you were darn loud. I heard you again about 20
minutes later and your signal was barely copyable...after sunrise perhaps?
WA9WFA: Oh great... 2 kHz, that'll push me out of the passband of some of the filtered receivers. In the Colpitts I have a dual 200 pf/section split stator cap plus 800 pf fixed in parallel with each section. I hate those 70 year old transmitting fixed caps because I know they're leaky and unstable. I've gone through the tx and tightened everything down, put DeOxit on everything, so I'm thinking it's those darn ole fixed caps. For my next transmitter I'd love to simply have to big mombo variable capacitors and no fixed capacitors to leak.... So if anyone has a 1000 pf/section split stator cap for sale, please let me know.. hi hi

Note that VE3XZ=VE3CUI in case anyone thought that they missed Eddy.

>Gads what a grand time the 1929 QSO Party is!! I was a pleasure working all
of you!

I agree...too bad it's just once a year ...hhhmmmm ;-)

Steve / VE7SL

Hull Hartley 80m
TNT 40m
full-size 1/4 wave g/p for 40 and 80

WA9WFA: Yeah I agree, once a year isn't enough. I have a goal to build a nice 29 transmitter using one or two 211's, make it stable, leave out my random 2 KHz frequency shift circuit, and run that transmitter all year long for normal contacts. What fun that would be. Last year I operated the January Link Cundall OT contest with my push pull Colpitts and a NC-101X. I did pretty good too.

73, Scott WA9WFA

Topic: 10853 Message: 10858

Hi Larry and All, I misspoke about K4JYS in NM, I meant to say W8KGI in NM. I know ole Bill is in NC and I was lucky enough to work him on both 80m and 40m.

Larry wrote:
I was on 40M Saturday morning for a while, but had to quit around 11:30AM local and when I started back up around 3:30PM, I went back to 80M as I heard no AWA signals on 40M then. Sounds like I missed out on some of the best time to be on 40M, drat.

I got on 40m as soon as 80m petered out mid morning but I found 40m to be pretty much dead 29 wise. In the early afternoon 40m started coming alive and more 29'er showed up. By 3:30 I was back on 80m as that was starting to work again and all that was heard on 40m was KB0ROB and WA3FFC calling with no one coming back.

Larry wrote: Sorry Scott; I didn't hear you calling and would have loved to work you! QRN on 80M was wicked here. If it makes you feel any better, I tried unsuccessfully to raise W1GIG as well.

Maybe I'll get lucky and pick up some propagation to the East Coast next weekend. There are a whole bunch of East Coast 29'er that I always look forward to working each year!

On my VE3XY comment, I only worked Eddy on one band so far, so I'm hoping to work him on both bands. Speaking of Eddy, I heard him using the VE3XZ callsign but I swear I hear him accidentally come back during an exchange with VE3CUI.. hi hi He was running the Rollins Rocket and I knew it was him the instant I heard the recognizable chirp.

Hope to work you Larry and the other East Coasters this weekend.

73, Scott WA9WFA

had a lot of fun listening / watching the signals. intend to make a
file of the band next saturday which can be read using Spectraview
with this the band segment is recorded on an SDR and individual
signals tuned in. Forgot how to do this and by the time I got it
working the band wasnt as active, the program is free and it
was fun to watch folk slide to frequency

Wild !
should fire up my 80 meter hartley maybe next time

Bob K3DJC

On Mon, 6 Dec 2010 14:02:55 -0800 <ve7sl@...> writes:

Scott - it was great to read your summary as well as Larry's. Hopefully
others will post their thoughts and observations as well.

I started out on 40m (it is still an hour before sunset out west when the
Party begins) and managed just three QSO's but working Larry, NE1S, was
very
gratifying. I am truly impressed with the operating skills of all of the
'29
participants as they seem to be able to copy the feeblest of signals
and never ask for repeats! With the RTTY contest in full-swing for the
first
hour of our affair, the normal suggested operating frequencies for 40m
are
pretty much useless and all three of my contatcs were up in the
little-used
and much friendlier 7.120 region...the old Novice band. Perhaps we should
seriously look at making this the suggested 40m 'watering hole' for
future
'29 Parties?

Off to 80m after the first hour and after waiting for the sun to go down,
things started to come to life. Overall I found condx to be good but not
quite as good as last year's superb propagation. As usual, the wind
started
to pick up right at contest time but I had added another tie-down to my
40
and 80m wire verticals and they were both stretched as tight as a banjo
string. I built this last year in case of wind and it saved the day for
me.
It consists of some homebrew 4" ladder line made from dollar-store
plastic
coathangers and four ground radials for each band.

The top end was shot up to the top of a 75' Fir using my antenna-wire spud
gun.

http://members.shaw.ca/ve7sl/verticals

After a few hours, the wind abated and things got back to normal. I heard several 'windy' signals during the contest as well. It was great to work some new blood or at least guys that I did not work last year. Absent
(at least I didn't hear them) were N9OO, W0LS, W0CWU, W0NYQ, WU2D, N9CQX, W3GMS, N4GJV, K0PK,WA9QNN, W2AO and W1TSP. My apologies if they were on the
air and just 'not heard' back here. Heard but not worked were: W8KGI (on 40m), W2CQH, W1GIG, W1ZB, K1GDH, K8MB, WB2QMY (he QSL'd my report but I couldn't pull him through...2 watts input) and AG2M....maybe next weeekend??

Best DX of the affair for me was working VE3AWA,WA3FFC, K4JYS, WA1JAS, W2LB
(5W!), K1TMJ, W3FJJ on 80m plus the big crowd from MN...must be something

in the
water there that breeds '29 activity?

Of my 22 QSO's, fully 7 were using Hartleys, 7 using MOPAs and 3 were using
TNTs...with the remainder using TPTG's or Colpitts oscillators. For the first few hours, whenever I heard N8YE, his tone was pure a.c. and virtually
impossible to copy at the strength of his signal. He must have done some tweaking as when we worked later in the evening, he actually had some tone
to his note, making copy much easier.

Some of the signals were exceptionally strong, given the power being used.
WA1JAS (8W) actually peaked to S7 on the S-meter during our QSO and Scott,
WA9WFA,
was over S9 briefly, just around his sunrise time. It really is amazing what
a little
favorable propagation will do with a miniscule amount of RF on 80m.

I hope to spend a little more time on 40m next weekend at the start....but
where will the activity be...
7050 or 7.110 ? I see there are two digital contests messing-up our 40m window again next
weekend but unlike last week, these ones will not stop after the first hour.

I would suggest everyone look up in the 7.110-7.120 region for starters.

>and WA3FFC in past years. I generally use FFC as my East Coast
propagation
>indicator.

he must have a great antenna as he was the east-coast beacon signal here
all
night long.

>I've heard there are
other West Coasters in the event too. Who from the west coast is
participating?

You have most of them...KK7UV (MT), myself, W7LNG (OR). I heard that
W7DRA
(WA) was on with a pair of 211's but I didn't hear him at all. I think he

was way down at the low end and not tuning high enough to find the AWA
activity. He will correct this for next weekend apparently...his Command
set
rx's are difficult to tune as well. Also, W7OIL (WA) will hopefully be on

with his delightful 'Double-M', a unity-coupled come TNT at around 2
watts.

>Are there other Canadian
stations that I need to seek out?

you got all of them....WAVE award is on the way :-)

>Heard one 29 station that sounded more
like two signals together. It's hard to explain but I didn't hear just
one
tone, but two tones separated by maybe 100-150 hz. It was cool.

this is exactly the way I described KK7UV's note to him...was it him by
chance?

> For you guys that worked me, what did my push pull Colpitts sound like
on 80m and 40m?

it sounded great once it decided what frequency it wanted to settle
on....when you called me, it jumped from my frequency, up 2 kHz and
stayed
there for the remainder...and you were darn loud. I heard you again about
20
minutes later and your signal was barely copyable...after sunrise
perhaps?

Note that VE3XZ=VE3CUI in case anyone thought that they missed Eddy.

>Gads what a grand time the 1929 QSO Party is!! I was a pleasure working
all

of you!

I agree...too bad it's just once a year ...hhhmmmm ;-)

10860. Kit Oscilloscope

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-12-07 01:50:10 UTC
From: Fred Crews
Topic: 10860 Message: 10860

I have found an oscilloscope kit (assembled) which I believe was assembled by a student who was training at the DeForrest Training Institute. It uses a 2AP1A 'scope tube, a 5Y3, a 6SJ7, and a 6SN7. It seems to be complete, and I want to restore it. The chassis is bent to house the 'scope tube at an angle. Controls are on the plate below the 'scope tube. Does anyone have any info on this unit? History?

10861. Parts Needed for RCA 911K Radio

Topic: 10861 Message: 10861

Thanks to all of you, but I have not had success in response to my previous post for the contact assembly that energizes the motorized tuning for an RCA 911K. Please look through your things and see if you can help me with the needed parts. I will purchase the entire contact assembly or a junker chassis if necessary (and financially practical) A photo of the needed assembly can be found at the web site below. This site is referenced only to show you a picture of the needed parts. The pictured radio is no longer available and this is not intended to link you for any commercial purposes.

http://www.8-track-shack.com/117585.html]
When the site opens, type 99K into their search box

Its the slotted, semi circle disc with the 7 or 8 "pegs" located on the left rear of the chassis. The "pegs" have one wire each soldered onto them.

Thanks, Ted

Howdy Guys,
This is my first post to the group. Had a great time listning in on the 1929 party last weekend. Had a qso with Steve, n8ye last week and he told me about the event. He was warming up his 210 rig running 2 watts and we had a good visit.

I dug around and found a very clean 210 in my box of old tubes and think I will look for the parts to put together a Hull Hartly for next year. Don't think I can get it done for next weekend even if I have the parts on hand but I am doing research and have a parts list to have handy when I get time to dig.

I choose the Hull because I saw one on VE7SL's web site that was build by my very good friend and mentor Wes, W5DPM. He has been SK for a while now but I think about him often and seeing the pic of his rig, made it easy for me to know what to build, I got the nice 210 tube from him and it would have pleased him a lot for me to put it on the air.

Some of the stations I jotted down were VE3AWA, WA1JJS,
VE7SL,W9QB,WA3FFC,K4JYS,K4JY,K4ASO,W9WB. A couple of these may not have been 1929 rigs,my notes are a little fragmented.

Anyhow, it was a blast listning in and I hope to join in first chance I get. Will probably have a question or two before I get it done tho.

To Scott, WFA, I have an operating Micamold XTR-1, we should set up a time and have an XTR-1 X XTR-1 QSO some time. I have not had mine on the air in a couple of years. Would be great to hear another one in the ether.

Thanks and GL to all you guys this weekend.

Jan,

Agreed! They are just like any other vintage tube type radios, and European paper foil caps act just like those from anywhere else...
I run into a lot of B+ blown dropping resistors, the high wattage ones in the 3-6K Ohm range.
And a lot of the radios are run until the tubes go bad, then put away.

-Tom

The first few paragraphs describing the state of radio in 1929, from the 10th anniversary issue of ELECTRONICS, April 1940

1930-1940: A Decade of Electronics

TEN years ago this month Electronics made its first appearance. Its readers were recruited from the membership of the learned and engineering societies. In a circulation campaign, unique in the annals of McGraw-Hill for its immediate success, potential subscribers were told that a new era had come, an era in which the electron tube would conquer industry as it had conquered communication and as it was revolutionizing the motion picture industry. Readers responded with amazing alacrity; they wanted the new paper. Clearly there was an interest in and a need for such a periodical.
What would Electronics be like?
In the initial issue, O. H. Caldwell, its editor, said Electronics would be a "clearing-house for facts, a camp-fire for counsel". Ten years ago it seemed certain that the economic crash of 1929 would provoke only a temporary stoppage of the wheels of industry, and that another year would see America well on its way again to new economic levels. The new paper would help engineers keep abreast of what other engineers were doing and, working together, scientists and technical men would aid in creating a new era.

In the following decade the editors and publishers- of the new paper have striven to make it the clearing-house for facts, a camping-ground for counsel and in a measure have succeeded. Each year of those 10 has promised to be the last year of the depression; economically everything would soon be on the upgrade; all such promises have been broken. Technically the 10 years have been most successful, engineers never cease to produce new products from the brain children of the scientists. Even a casual perusal of the bound volumes of Electronics for the ten years will provide a feeling that technology always moves forward.

What was the industry worrying about 10 years ago?

In the first issue, pains were taken to point out the important characteristics of the pentode tube, then coming over the horizon for the first time. There was much controversy over this multi-element vacuum device. Should it be permitted to enter the radio industry? Was it not just one more complication to upset manufacturers, dealers and set owners? Why should there be a new tube? The screen grid tube had not been thoroughly digested, but here from Europe was another complex structure. As a matter of fact there were two kinds of pentodes, according to writers in the initial issue, April 1930. There was an r-f tube and one designed for power output. Neither was much good, according to present-day standards, but both seemed mighty unpleasant new products to the radio tube and set industry which was pretty satisfied with itself.

Today, pentodes of all sorts have practically removed the demand for tubes of the simple types used in 1930. All those who objected so strenuously to introduction of new tube types have had to take them in their stride, and to witness an expansion of the receiving tube list that in 1930 would have seemed as impossible as present-day tube prices.

In this first issue, S. M. Kintner, manager of the Westinghouse research laboratory discussed the industrial uses of the vacuum tube and spoke of its place in industry. Long an electronics champion at Westinghouse, Mr. Kintner, friend of all research, unfortunately did not live to see all of his hopes achieved.

In this first issue, Dr. A. N. Goldsmith lamented the fact that sound reproduction in the theater was so poor. It was standard practice, then, to cut off all frequencies above 3500 cycles to get away from ground noise. All that is gone, of course, and in the better theaters today it is possible to listen to sound quality seldom achieved by the better radio receivers.

One of the original editorial staff members, F. S. Irby, related-the economic revolution produced in motion_ pictures by the advent of sound. Then there were 22,000 theaters showing pictures in the United States and of these, about 9,250 had been equipped for sound in the two years that had elapsed since the "Jazz Singer" (October 1927) had given movie goers a new vision, one in which they could hear their favorite stars as well as see them in motion. Now, of course, no theater which does not have sound equipment can even open its doors. Its lights are permanently dark.

"At the beginning of 1927 there were perhaps not 5 companies engaged in the manufacture of sound apparatus. By the end of 1929 there were 154 manufacturers in this field and as many as 182 makes of sound reproducing apparatus on the market". Most of these manufacturers have disappeared in the ten years that have elapsed since Dr. Irby presented these statistics. In several issues following the initial April 1930 Electronics there was much discussion of the wide film (Grandeur) then proposed as another motion picture innovation. Wide film no longer plagues the minds of producers and exhibitors.

In the first issue W. C. White of the General Electric Vacuum Tube Engineering Department brought engineers up to date on the possibilities of the magnetron tube. Then it was possible to generate frequencies as high as 100 megacycles (a term not used in those days) and powers as great as 2.5 kw had been produced at 75 Mc. Dr. Mendenhall of the Bell Laboratories described the new double-ended high frequency tubes engineered for the transatlantic telephone circuits. The 240-A water cooled tube would generate 10 kw and the air cooled 251-A would produce 1 kw at 30 Mc.

Among the new products mentioned in the first issue were several from companies which no longer exist. Arcturus offered the Photolytic cell, a liquid photovoltaic cell in a handsome container. It listed at $31.50. Ten years later (1940) Arcturus as a tube producing company gave up the ghost, unable to make a profit from making tubes at present low retail prices. Jenkins Television offered the Radiovisor kit for $75 without the neon lamp. It would produce television images about 2-inches square, 48 lines, 15 pictures per sec. DeForest Radio presented a short wave receiver "radical in appearance". Four tubes (types 22, 01-A and 12-A) and a series of plug-in coils, the latter stuck up on top in a jaunty and much too exposed fashion, constituted the essential components. It would cover the range from 20 to 200 meters.

Of 11 new products described in this first issue from 11 manufacturers, only one remains in modified form, and of the 11 companies only 4 are in existence today. In the News section, mention was made of a, new set of equations from Professor Einstein, still in Berlin, relating gravitation and magnetism, and of the R.M.A. committee to study the pentode situation (no set manufacturer would use the things in their 1930 production), and plans were described for the supercollossal R.M.A. Radio Trade Show to be held in Atlantic

City in June.

In a department devoted to brief summaries of U. S. patents were names such as Harry Nyquist, Alva B. Clark, E. L. Chaffee, Samuel Ruben, R H. Ranger, John H. Miller, Abraham Esau, F. A. Kolster, G. W. Pierce, H. C. Rentschler, Donald G. Little, Robert L. Davis, Carl F. Goudy, H. C. Dunwoody, O. T. McIlvaine.

Patent numbers ran from 1,748,000 through 1,750,000. In the February 27, 1940 issue of the Official Gazette of the U. S. Patent Office the numbers are up in the 2,192,OOO - nearly a half million patents had been issued in this ten-year period, surely no period of inventive depression.

The mast-head of Electronics of that initial issue bore four names. O. H. Caldwell was editor, a veteran McGraw-Hill editor, first of Electrical World, where he invented Electrical Merchandising, becoming its editor. Here he invented Radio Retailing, becoming its editor. And here he invented Electronics and became its editor. Mr. Caldwell left Electronics in 1935 founding a paper of his own. As associate editors were Franklin S. Irby and Keith Henney. Dr. Irby came from E.R.P.I. and represented the motion picture industry to Electronics readers. A Ph.D. under Michelson, a Lieutenant Commander in the Navy, Dr. Irby left Electronics several years after its founding and subsequently took a degree in law and has been admitted to the bar. Today he is in the legal department of 20th Century-Fox Films.

Keith Henney was drafted from his job with Radio Broadcast, a magazine long since defunct but remembered fondly by old timers in the radio industry. His contribution was his knowledge of the radio industry from the technical angle attained by experience during the war as radio operator, and as engineer at the Bell Laboratories, by technical training under Professors Pierce, Chaffee and Field at Cruft Lab and finally by his 5 years on Radio Broadcast. He, alone of the original editorial staff, continues on Electronics, now its editor. The fourth member of the editorial staff was Dr. DeForest, consulting editor. Always bullish on electronics, Dr. DeForest has often contributed sage advice and worthwhile information to the periodical during its 10 years existence.

A feature of the initial issue was a colored chart giving the radio spectrum as it was divided in 1930. Frequencies higher than 23,000 kc were assigned for experimental and amateur use. At 60 Mc the spectrum

ended for there seemed no way to generate frequencies so high in quantities great enough to be useful. This chart became so popular that it was revised in 1932 and 1936 and now appears again in this anniversary issue.

I saw them in the showcases when I was at Bonhams last week. They're
all either restored/polished or are in amazing original condition.

Hi All

I just finished downloading the article off W1UJR web site on the W1FPZ TPTG transmitter. Has anyone built this transmitter and pictures have any pictures they would be will to send me on the layout. I plan to build one for the next AWA contest.

Thanks

Sorry, no help with the kit!

The MET- 3 uses a Dumont 164-E as an example. INE-10 references a Supreme 546.

I've seen other De Forest kits, but none of the manuals or lessons.

This year's QSO Party was just as exciting as my first one, last year. Although conditions were generally good, I don't think they were quite as good as last year's superb propagation. Both weekends saw numerous short-lived enhancements, often just long enough to exchange the needed information before conditions fell off again. For the most part, signals were weak and fady but a few 80m signals (KB0ROB,VE3AWA and WA9WFA) all had my receiver's stingy s-meter past the s9 mark at times! As I mentioned last week, I am truly impressed at the skill of the QSO Party's participant's ability to copy such weak quirky signals and rarely ask for a repeat!

From the sounds of many signals, wind was an issue - not totally unexpected for our December time-slot. Even some of the usually rock-solid MOPAs were being pulled skyward. Unlike last year when I experienced winds up to 80 MPH and eventually had to shut down, this year the wind only reached 50 MPH tops. Just before the start, I added another tie-down to my wire vertical
40/80m system and the entire antenna (consisting of 5" ladderline elements suspended from the top of an 80' Balsam) was pulled as tight as a banjo wire. It seemed to do the trick and at the height of the winds on the second weekend, I was still able to work with only slight shifting of the note.

Once again this year, my vote for the best-sounding signal goes to Harold, KB0ROB, in Minnesota, for his xtal-like note and stalwart presence. The crowd from Minnesota is really amazing and without them, the QSO Party would be very much less than it is today. It is wonderful to see activity beginning to grow out west, with several new stations making their QSO Party debuts. Hopefully this trend will continue in the years to come!

Fully eight of my contacts were with stations running less than 5 watts. The fact that you can only squeeze a watt or two from your lashed-up TNT or Hartley
cannot be used as an excuse for not getting into the Party!! And speaking of TNTs and Hartleys...of my 41 '29 station QSO's, 20 were using Hartleys, 11 were using MOPAs while just 4 TNTs got into the log. It's interesting to note that the early Handbooks promote the TNT as the 'simple' beginners rig but in fact, I believe it is more difficult to properly optimize and tweek a TNT than it is a Hartley. Perhaps that is why the Hartleys really are more popular.

Although I managed to work more stations this year on 40m, I still think that this band could be better utilized during the early evening and post dawn hours. I listened to several east coasters calling CQ after CQ during the wonderful propagation offered on 40m during these times, but very few

other stations were active.

The second weekend suffers a terrible contesting
conflict with the SKCC's CW QSO Party as well and perhaps the dates for next year will need a re-look to avoid the mess. Many of my 40m contacts were on or around 7.110, away from the QRM down lower. Perhaps this should be our official QSO Party watering-hole for future 40m operations?

Thanks for one of the most enjoyable annual radio activities to be had. I'm already planning for next year's affair!

Steve / 73

Topic: 10880 Message: 10885

I do enjoy reading the post contest reports from the 29'ers! The 2nd weekend was pretty much of a bust for me. We were in the middle of a major blizzard Friday and Saturday. Saturday night 9 PM the snow finally stopped and I had to go out and snowblow the 2'-3' of snow in the driveway so my wife could go to work the next morning. That took me nearly 2 hours of prime QSO Party time. Next morning I first had to go outside and clear the end of the driveway where the snowplows shove up a couple of feet of snow, again taking some prime 80m QSO Party time. Had family duties for 3 hours in the afternoon and missed the final 80m sprint up till 5 PM.

Propagation was rough in Minnesota for me. About an hour before the event, 80 and 40m suddenly was ripped up by some S9 roaring interference that lasted for several hours. I put the MFJ Noise Reducer and my 500 hz filter to work and was able to control the racket. Plus there was snow static from the 40 mph winds during the blizzard. I only picked up maybe 8 QSO's the whole weekend. I haven't double checked my notes yet but I was somewhere around 43 total contacts, with 2 of those being modern guys asking what was going on, so a total of around 41 1929 QSO's.

The East Coast was rough for me this year. I did manage to work several East coast guys but signals were just barely above the noise. I heard NE1S a couple of time over the weekend but wasn't able to work him. I also heard WU2D once and I think we worked. I don't have my log in front of me. It's still a treat to hear the 29'ers even if I can't work them. I was pleased to hear more West Coast stations to!!

My push-pull Colpitts "SkyMaster" was experiencing wind modulation as the antenna was whipping around in the winds. I heard alot of wind modulation on others as well, even some of the MOPA's were experiencing it. I didn't run into any other Colpitts configuration I don't think. I'm assuming Eddy VE3XY was running his Colpitts "Rocket" but I don't recall for sure. Was I the only Colpitts guy???

My Colpitts transmitter did fine, very minor chirp I believe, quite a bit of wind modulation on the 2nd weekend, and a propensity to suddenly shift 500 hz to a KHz. I know my connections were solid so I'm wondering if that jumpy behavior is coming from the pair of 400 pf fixed capacitors across each section of the split stator tuning cap. Those are the typical 70 year old transmitting caps so I imagine they have all sorts of odd things going on inside.

Next year I'm thinking of leaving the Colpitts on 40m and building a new transmitter for 80m. I have my eye on John Rollins TPTG transmitter design. As always, I seem to have bigger plans than available time, and then when the 29 QSO Party rolls around again, I'm simply dusting off last years transmitter. hi hi

The 40m comments are interesting. I agree that the 2nd weekend 40m was a real mess between the SSB stations, normal CW stations, the contesters calling CQ WES, the RTTY, the digital. Plus there was that wideband multiplex digital signal at 7050 for a long time. What was the deal with that I wonder. Wow. I did listen quite a bit up at 7110 area but didn't hear any 29'ers. I've read the comments here where several of the guys were making

in the clear QSO's up there. The CW WES guys were up there too. To Steve VE7SL's comment, yes we should plan on listing 7110 for next year as well as the 7040-7060. It would be great if we could get more 40m activity going.

That's about it for now. I can make more comments when I have the log and notes in front of me. It sure was a pleasure working you guys in the QSO Party!!

73, Scott WA9WFA

10889. 1929 QSO party comments de n4gjv

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-12-18 17:00:29 UTC
From: Ron Barlow
Topic: 10889 Message: 10889

I was unable to be QRV during the first weekend, of the Bruce Kelley Memorial QSO party, but I managed to be QRV for a few hours, during the second weekend.
I logged 16 stations on 80M, and 4 stations on 40M. I operated my 80M Hartley at 3 watts DC input, and my 40M Hartley was operated at DC input of 2 watts DC input.
The 80M rig uses a pair of triode connected 24As, and I operated it at 4W, last year. However, it sounded better when I reduced the feedback, a bit, which reduced the input power to a bit over 3W (15 mils @ 210 volts)
The 40M Hartley uses a single triode connected 24A, at a DC input of 2 watts.
Some of the highlights included QSOs with Steve, VE7SL, and with Mike, WA1JAS, both on 80M. Despite the fact that my xmit power was down, and my antenna situation was degraded from last year, Steve again provided my best DX, when his "golden ears" enabled him do a great job of copying my feeble signal, out in far western BC!
Many thanks to Mike, WA1JAS, for his great patience! Many repeats were required, to complete a QSO, as I had severe problems with "wind modulation", QRM, and QRN. Some of the QRN came from distant thunderstorm activity, but the worst of it, by a large margin, came from my neighbors electric fence! Immediately after I replied to Mike's CQ. the latter very suddenly became extremely noisy, coincident with the abrupt arrival of the the leading edge of a very strong cold front. The strong wind apparently quickly dried out the previously drenched multitude of dissimilar metal joints, in his haywire fence. The wind also probably caused these joints to be repeatedly flexed. What a horrible racket!
Fortunately for me, the severe QRN didn't make its debut, until ~ 1 hour before the end of the QSO party, so I didn't have to endure it for a long period!
All in all, I had an absolute blast! I regret that I was unable to spend more time operating. Thanks to everyone who participated, and to all of those that made this most enjoyable event possible!

73 de Ron N4GJV

PS I've noted that others have mentioned their regrets that they had to wait an entire year, for the next QSO party. Those are my sentiments, also. Would it be possible to increase the time spread, between the two weekends? In addition to reducing the "wait time" between events, I find it difficult to be able to participate on consecutive weekends. Perhaps others also have this problem?

10890. Fone Transmitter

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-12-19 16:57:27 UTC
From: William Props
Topic: 10890 Message: 10890

Hello everyone,

I have been tossing around ideas on building an early to mid 30's fone transmitter. I was thinking of a 45 hartley oscillator driving a pair of 47's in the final. What tubes are suggested for the modulator? A pair of 45's? I want it to be Heising modulated. Open to any suggestions or criticisms.

Thanks,
Chris

Does anyone have information on the KAAR radio product line? I have a few of their transmitters here that have been heavily modified from two-way radio use that I am in the process of trying to get back to orginal configuration. The ones I am looking at are low band police and marine rigs of the 1930s and 40s. What receivers were used with the KAAR xmtrs? Unlike other marine rigs it appears that many of their products were xtmrs only and not xmtr-rcvrs. More like early police radios with separate xtmr and receiver.

10894. Journal to be Late--Cundall Info On Line

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-12-23 01:37:48 UTC
From: Marc Ellis
Topic: 10894 Message: 10894

To the Groups

Journal production has been slowed down, as is inevitable, by the upcoming holidays . But more importantly we are switching our mailing mode from first class to non profit class. This mode is slower, but will result in a very significant savings in postage.

Because of the switch, it is unlikely that the January issue, with the Cundall rules and logsheet, will be in participants' hands in time for the event. However both are now available on our web site at antiquewireless.org

I will send out a "heads up" when the Journal is actually mailed.

Hi:

I am a new member. I was an avid SWL listener as a kid (Hallicrafters w 600) who just got vintage EMUD Rekord Senior 60, Hallicrafters TW 2000 and a Blaupunkt (looks similar to Grenada, not sure of model) for Christmas. Where can I obtain schematic diagrams for the radios?

Also the EMUD has antenna and ground ports slightly larger then mono jacks. What kind of jacks are corresponding males. Excuse my technical ignorance. Merry Christmas.

10900. Newbie '29 builder just gettin started

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2010-12-26 17:34:12 UTC
From: N2BHA
Topic: 10900 Message: 10900

Happy Holidays to everyone!
I have been online looking at some of the '29 transmitters and I have decided that I must build one and get it on the air. I am an electrical engineer and, while my first rig was an HW-16, most of my construction work has been more modern QRP receivers, transmitters and transceivers (kits and Manhattan style building). I was wondering if any of the Elmers out there could point me in the direction of tutorials, books, etc. for "the newbie" just starting out in this fascinating area. If there is a step by step guide for those wishing to build there first TNT rig for instance this would be greatly appreciated. If you like you should feel free to respond directly to n2bha@... if you feel that such posts would be a nuisance to folks on this news group.

I look forward to posting my first QSOs with my '29 soon.

Many Thanks and 73,
Vaughn N2BHA

I really don't know what the bushings look like but my first thought would be to look at what McMaster-Carr has... this is the link...

http://www.mcmaster.com/#bushings/=abvqpq

While you are there, stock up on stainless steel slotted screws (pretty hard to tell from nickel plated steel or brass)

Also look at the brass wood and machine screws. If you are into telegraph or telephone stuff, note that they have 5-40 and 6-40 screws.

If you have any european radios, think about having 3, 3.5 & 4mm black oxide cheese head slotted screws on hand... And of course nuts and star washers to match.

Don't forget about small set screws (grub screws)

Prices are reasonable in my opinion.

Folks,

Not much activity here so I thought I'd mention some scarce audio
I found this weekend on the Web... It may be new to you... It was for me...

I draw your attention to a couple of programs that give a small hint of 20's radio sounds that were new to me....

http://randsesotericotr.podbean.com/category/early-radio/

Look for the WHB audio... A 1925 recording... Of radio announcers.

Elizabeth McLeod shines some light on the recording...

"It's a dub of a souvenir recording made at the trade show -- all of those announcers were there in person and took their turns recreating their traditional station IDs. It was a gathering of mostly Southern and Western broadcasters of the sort that was very common in the mid-twenties. I don't have a specific date, but I imagine you'd find it mentioned in Radio Digest that summer.

"The WSB announcer is Lamdin Kay, who was one of the most famous radio personalities in the country at the time, and the first to use chimes as a station id signal. The Texas station is WBAP in Fort Worth.

"Bill Hay indeed started his radio career at KFKX, which was in the same building as the piano company where he'd worked as a salesman."

Also you can follow the link to another recording.... The first part of this I had heard before but the last half is new to me.... It is from 1929/30....

http://www.podbean.com/podcast-download?b=56462&f=http://randsesotericotr.podbean.com/mf/web/wg88fd/national-radio-advertising.mp3
>>>>>>>>>>>>>>>>
For you 30's folks.... Take a listen to this 1937 Philco sponsored program.

http://randsesotericotr.podbean.com/category/world-broadcasting/
>>>>>>>>>>>>>>>>
For those TV historians:

While at the site, I spotted this link to another genuine 'first'.... Reputed to be the first and oldest surviving color video tape program.... The dedication of WRC-TV in Washington, DC in 1958....
You can stream it in full screen mode.... Even more interesting in that the program from Washington was recorded at NBC network facilities in L.A. - Like the Wizard of Oz... the show starts in B&W and Sarnoff pushes a button to start the color segment at about 15 minutes into the program. There is wry commentary by David Brinkley....

http://www.veoh.com/browse/videos/category/news/watch/v191020606nr3MbJG

I hope this proves of interest...

Robert

From: forestradio
Topic: 10891 Message: 10907

John Kaar lived around the corner from where I grew up in Menlo Park, CA, and I visited with him at least twice in the 1970's. Kaar worked for Remler Company in the early 1930's (in San Francisco) where my father also worked. He founded his own radio company in the later 1930's in Palo Alto, and built many HF and VHF radios for different applications up until the 1950's. I have a couple of his rigs built for the U S Dept of Agriculture's Forest Service from the late 1930's. In the mid-50's he sold out to another firm and pretty much retired from the business. The KAAR name was used at least until the mid 1970's (for example, it was applied to Canadian Marconi CH-25's for Forest Service use, and to many CB radios).

AWA member Lane Upton (now an SK) worked with John Kaar and knew him very well. I remember him as a very nice guy and excellent engineer and business man.

Kaar worked for Remler Company in the early 1930's (in San Francisco) where my father also worked. He founded his own radio company in the later 1930's in Palo Alto, and built many HF and VHF radios for different applications up until the 1950's. I have a couple of his rigs built for the U S Dept of Agriculture's Forest Service from the late 1930's. In the mid-50's he sold out to another firm and pretty much retired from the business. The KAAR name was used at least until the mid 1970's (for example, it was applied to Canadian Marconi CH-25's for Forest Service use, and to many CB radios).

I have a few of their transmitters here that have been heavily modified from two-way radio use that I am in the process of trying to get back to orginal configuration. The ones I am looking at are low band police and marine rigs of the 1930s and 40s. What receivers were used with the KAAR xmtrs? Unlike other marine rigs it appears that many of their products were xtmrs only and not xmtr-rcvrs. More like early police radios with separate xtmr and receiver.
> > 73, DeWitt N4QNX
> >
>
Hello DeWitt,
I'd like to find out more about the low band rigs you have, and was wondering if any may be similar to the little transmitter I have.

I have a nifty little desktop transmitter, namely a Kaar model 102. It covers 10 thru 160M, and is completely bandswitched, having it's own self contained grid and tank coils. It's a cutsy thing made either in 1938 or 1939. It uses a single 807 modded by a pair of 6N7 dual triodes, probably in PP-Parallel. Unfortunately, some one ripped out some of the guts underneath, and I need a schematic or manual for the thing to restore it electrically.

Is there any possibility you or anyone reading this may have a model 102 in their collection; or a schematic or manual for same? Any information will be greatly appreciated!

Very Best Regards,
Joe Cro N3IBX

Glad the sites were useful for you, Vaughn. I'm trying to gather parts for a 1940 receiver/transmitter and the 400-0-400 volt transformer is proving difficult to find. I might just give up on that project and go ahead with the 1929 Slat transmitter. So, I might get on the air sooner than I anticipated :)) Keep us posted on your project !

Many thanks for the info Bill. Very nice sites! I have also been getting some very helpful comments and links from Lou, VE3AWA and Joe, N2OUV. Really fantastic guys. I had neck surgery not long ago and I am just now getting to the point where I can start to spend some time at the bench. I will look for you on the air very soon!

Thanks again and 73,
Vaughn N2BHA

> I have been online looking at some of the '29 transmitters and I have decided that I must build one and get it on the air. I am an electrical engineer and, while my first rig was an HW-16, most of my construction work has been more modern QRP receivers, transmitters and transceivers (kits and Manhattan style building). I was wondering if any of the Elmers out there could point me in the direction of tutorials, books, etc. for "the newbie" just

starting out in this fascinating area. If there is a step by step guide for those wishing to build there first TNT rig for instance this would be greatly appreciated. If you like you should feel free to respond directly to n2bha@... if you feel that such posts would be a nuisance to folks on this news group.

> I have a nifty little desktop transmitter, namely a Kaar model 102

I've followed this Kaar discussion with interest as like Joe I also have one of the 10-Z (not 102) transmitters.

Joe, I'd be happy to provide you with photos of the underside or anything that would be helpful, but I'm also in need of a manual. This seems to be a truly forgotten rig but it seems to be ahead of its time in that it's all self-contained (including power supply and modulator as Joe described) and is bandswitching to cover the 160-10 meter ham bands at a time when many others relied on plug-in coils. The other feature of note is that mine at least has a 6 volt vibrator and internal switch to select from AC or 6 volt DC power. This, the wide-range antenna network and the handle on the side tells me the 10-Z was intended for portable and mobile operation as well. The quality is certainly consistent with what has been said about Mr. Kaar and his company.

I'll pass along anything I find, Joe.

Ron et. al.,

Here is the list I have of 1929-eligible tubes - Someone posted this on one of the reflectors long ago and I had saved it. I know it isn't complete; for example, the '202 definitely qualifies and it's not listed. Also absent are the "non-A" versions of the '01, 03, etc.

UX-112A, UX-120, UX-171A, UX-199, UX-201A, UV-203A, UV-204A, UV-206, UX-210, UV-211, UX-222, UY-224, UY-227, UX-240, UX-245, UX-250, UX-841, UX-842, UX-845, UV-849, UV-851, UX-852, UV-860, UV-861, UX-865, WE-211A, WE-211D, WE-212A, WE-212D, WE-215A.

UX-213, UX-216B, UV-217A, UV-217C, UX-280, UX-281, UX-866, UX-872, UX-874, UV-876, UV-886.

The linked Wikipedia article has the usual Bravo Sierra about the Signal Corps being the first to reach the moon. In reality, Dr. Zoltan Bay, a Hungarian researcher, did the trick in 1944. He published his results, unfortunately in wartime Europe, and nobody here found out about it until much later. The Sean Swords history of radar has the full story.

10934. AK 44 and Pooley cabinets

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-01-13 13:52:30 UTC
From: oneradiodoc
Topic: 10934 Message: 10934

Yesterday, we had a family drop off their great great uncles old radio, no one in the family wanted it. Turned out to be a very clean looking Atwater Kent 1928 model 44. What came with it, I found far more interesting though. It came with a two part matching walnut cabinet. The upper holds the model 44. Has a flip up lid and the front drops down to reveal the front of the 44. The separate lower cabinet appears to have been for a large horn speaker, most the horn parts seem to have developed legs and walked away! These cabinets may have made by Pooley. The lower cabinet has a metal tag indicating it's a model 2300.

Question. Is there any information on Pooley cabinets that could help prove out this theory, such as catalogues, etc.?

10937. AK44 and the Pooley 2300 cabinet

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-01-14 14:40:48 UTC
From: oneradiodoc
Topic: 10937 Message: 10937

morning to the group. Thanks to all for your assistance and especially Ron, for pointing out there was likely a front face plate hiding the AK44's metal case. This radio was dropped off in pieces along with extra turntables, speakers etc. It all seemed a bit overwhelming with the number of pieces the previous owners kept bringing in and dropping off. I was telling Ron, that I initially thought the cabinets may have simply been a couple of cut up old radio cabinets made up to house the AK44. Later after having a closer look, it appeared the 2 separate cabinets were actually matching. Fortunately, Ron said there should have been a face plate to hide the metal case and he was very right. We found one leaning up agaist a wall in our shop that had escaped our initial search.
For anyones interest I uploaded 4 pictures into the album section. There is a metal model number in the lower case indicating it's a 2300.

Thanks again Ron... John

10938. New Jersey Antique Radio Club meeting live on the web tonite 1/14/2011

From: David
Topic: 10938 Message: 10938

Hi all,

We'll be webcasting the New Jersey Antique Radio Club meeting live tonight, Friday January 14, 2011.

Everyone is invited to "tune in."

Full details are available at www.njarc.org.

Tonight's meeting topic is our annual DX-pedition. There'll be a presentation to explain exactly what an NJARC DX-pedition is AND we'll have a guest speaker, Jon Kummer, the new editor and publisher of Antique Radio Classified magazine who will fill us in on the details of his vision for the magazine's future.

If all goes well (sometimes it does and sometimes it doesn't) we'll also have a live "chat" window on our website and also on our streaming host site. You can even post questions for Jon if you like and we'll try to relay them to him for you.

The meetings are scheduled to start at 7:30 PM although sometimes it happens that we have to start a little later. We begin with a "business meeting" for about 20 minutes followed by a 10 minute break and the meeting picks up again with the featured presentations which are scheduled to begin at approximately 8:00.

It's always a fun time and we hope you can join us.

10939. 1920s parts identification?

Yahoo group: antiquewirelessassociation (2010 — 2015)

Hi folks,

I'm new here and looking for advice... even if the advice is "forget it!" :-)

A long time friend and member of this group has rejuvenated a latent interest in building a 1920s ham station. I have considerable building experience but I find I am really up against it on this project even before it starts. I want to make this setup as authentic as possible, realizing of course 100% isn't possible due to some period parts being absolutely unobtainable.

The main problem I have at this point is lack of experience in identifying parts from that far back. If I hold in my hand a vintage part, I can't tell if it is something that would have actually been available in the 1920s or one that may not have been introduced until a decade or two later. I lack the resources to acquire large volumes of old magazines, books, etc. for the advertising. Any suggestions? Is there hope, or should I run from this project while I still can? Perhaps if I inquire about specific items here, someone with more knowledge may be able to help?

Worse yet, at least one potential source of parts only has brief text descriptions, no pictures. Even if the source may indicate the part is from the right era and correct value, I am unable to tell whether it will fit/mount/work correctly and/or not look totally absurd and out of place in what I want to build. Variable capacitors (oops, I mean condensers) especially fit this category.

I really want to do this project but currently I feel as lost as if I wandered off a wilderness trail on a cloudy night with no compass! Don't ask how I know... ;-)

Hi my name is mark and i collect old radios and transmitter.
There are parts for the 20 still out ther to buy if you want them.
check ebay and send me a list of what you need.
Thanks Mark

10941. Linc Cundall OT Comments

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-01-16 05:33:47 UTC
From: whitebear1122@comcast.net
Topic: 10939 Message: 10941

I was able to work some Linc Cundall guys on 80m tonight. I think my farthest contact was AC5JH in Oklahoma, wow! I heard but did not work W1GIG, KB0ROB, and one other that I don't recall. I was on for several hours but didn't hear too many stations. W0CWU was sounding FB at my qth with his 50 some watt MOPA. I am hoping to work some more guys in the morning. It was nice working Ed at the AWA headquarters W2AN station.

I started out using the 1929 210 push pull Colpitts transmitter and the 1941 g.HRO5TA-1. During the lulls I worked on the Gross CP-100/VFO situation and finally made some progess after realizing there was a neutralization problem between the oscillator and buffer stage. I didn't realize Once I cleaned that up the VFO appeared to work ok. I was able to move around the entire 80m band FB. I hooked up the Gross CP-100 and ran 50 watts for several contacts including Lou VE3AWA, Ron N4GJV, and Tom AC5JH. I wonder how the Gross sounded to those guys. I'm thinking tomorrow of replacing the HRO with the 1934 NC-101X and run a full 30's station.

I'm thinking of looking for a Millen 90711 vfo as it covers 80m, 40m, and 20m. My vari-arm is 80m only. It does do 40m if you open the coupler and unsolder a connection. If anyone has a nice shape 90711 that they would like to sell, please contact me.

I'm planning on leaving the Gross/NC-101x station hooked up for contacts all year long. Let me know on the 90711.

73, Scott WA9WFA

Looking to buy or trade for a Millen 90711 VFO to pair up with my 1935 Gross CP-100 transmitter and 1934 National NC-101X receiver. I ran the Gross and an HRO5TA-1 in the Linc Cundall this weekend. Stunning station. Looking for a nice Millen 90711 so I don't need to buy a jillion crystals. 73, Scott WA9WFA

From: Bill Smith
Topic: 10939 Message: 10946

Hi Paul,

The 20's were really in the dawn of radio, and there weren't many transmitters other than spark designs. In 1920, the vast majority of receiving sets owned by amateurs were of the crystal variety. Armstrong had invented the regenerative detector, which he attempted to patent in 1912, but receiving tubes were limited to the WD-11 and 99 variety. 25-watt transmitting tubes were developed by AT&T as early as 1915, but were very expensive and not generally available.

Major Armstrong stepped off an elevator in 1922 with an battery-operated superhetrodyne receiver under his arm, fully operating with an opera program in progress. His meeting with the RCA board of directors set the stage for the development of the popular AM receiver, which RCA finally brought to market as a six-tube receiver in 1924. AGC wasn't available in a receiver until 1928. Initially based in Oakland, CA, Magnavox lead technological development in the cone-type speaker and in 1926 RCA introduced a cone-speaker with a dynamic magnet and voice coil.

Perhaps your best bet in studying technology of the period is to frequent swap meets and used book stores to hunt for period technical books. They can usually be obtained at a minimal cost, and contain a wealth of pictures and descriptions of the then current state of the art. The handbook CD's offered by the ARRL might be another source.

The information described here came from "The Early Days of Radio Broadcasting" by George H. Douglas, but there are many other books that might have more specific information regarding development of the #47 or #10 tubes, for example. You also might browse the Internet, much history is recorded there. With history will come examples of equipment and components. The study will provide you with a terrific insight of American industrial development which can only reinforce the thrill and excitement of making a radio contact with a homebrewed 1920/1930's transmitter. These radios truly glow in the dark.

Good success!

This is to follow up on my previous post regarding Kaar Engineering and the model 10-Z transmitter.

Since previously discussed, I've restored my 10-Z and tested it on the air with good results. Despite not having any technical documentation, I found the circuitry very straightforward and thanks to the lack of ham-inspired modifications it was easy to get going.

For the benefit of Joe and anyone else who'd like to take a closer look, I've posted a number of pictures of it and my other Kaar gear here:

http://smg.photobucket.com/albums/v652/ranickel/Kaar%2010-Z/

I'd like to learn more about John Kaar and his company. If anyone has any literature, catalogs, or other information they would be willing to share, please drop me a note at w9ran@...

Rick W6NIR, would be interested in any of your recollections especially. Based on my experiences, Kaar made very nice equipment.

Hi Bill,

Thanks for the interesting information and suggestions!

I do have the cart before the horse here. A sensible approach would be to gather books and magazines from the time, study them, and then collect parts for a project. That makes perfect sense. I, however, am rarely accused of making sense!

I'm in a very isolated location, with only a few very small swap meets within a distance I can manage. But I will be looking for books and periodicals from the period as opportunity and funds allow. Meanwhile I have spent many hours (must be in the hundreds by now) scouring the internet for whatever I can find that is helpful. I have a long way to go but I am gaining knowledge of the era.

I am cautiously collecting parts, researching as best I can as I go to make sure they are from the period I want. Or at least that they were available then, since only in rare cases would I be able to determine when the actual parts I have were manufactured. It's going OK, I think.

As with most projects, this one has already expanded before even getting started! I've decided I need a 1920s receiver to go with the transmitter (naturally), so I'm working on gathering parts for that too.

Bob,

I'm glad that you got your 10-Z running!
A few years back I was blessed to pick up a Kaar Conalert II Conelrad Monitor.
The piece was very well made, and was easily brought back to life.
I've got it parked on one of the local AM stations.

I am rarely accused of making sense either!

For a transmitter, you might look at TPTG circuits (tuned plate-tuned grid). They were usually assembled on a plank of wood and used 1/4" copper tubing for coils. Transmitters were free-running oscillators, crystals were either not available or a real luxury. Amazingly, it is possible to adjust a TPTG transmitter to make it essentially chirp-free and frequency stable, but you will need to operate it with a highly regulated power supply. Also, remember in the '20's that limitations with tube designs restricted popular use of shortwave frequencies. Receivers were either TRF (tuned radio frequency) or regenerative.

Early radio manufactures often started as part manufacturers, in fact the earliest radios were breadboards of parts. Later, parts companies introduced complete radio sets as an assembled component.

However, your question regarded recognizing the age of parts. Resistors of the 20's era were not used much in radio circuits, most amplifiers were transformer coupled (tubes were really more impedance converters, voltage amplification occurred in the transformer turns-ratio). Transformers were often encased in metal shells.

As such, resistors were wire wound, as used in the filament circuits to control tube gain, or were in cartridges to be used to establish grid-leak bias in detector circuits. Capacitors were largely of the mica variety, and were encased in phenolic. Variable capacitors came in a variety of designs, with Cardwell a major manufacturer of transmitter capacitors.

Home-made Inductors were often wound on paper tubes using cloth or silk-covered wire. Commercial coils were made from bakelite forms or a sturdier form of cardboard (I am not sure of the material, but it was often protected with shellac). You may discover a number of novel coil assembly designs that were used in period receivers. Often the wire covering was a bright green color, but could be white, or other colors. Multi-stranded Litz wire was used with receiver coils.

From what I understand, radio equipment was operated almost exclusively from battery supplies. High-value capacitors that we know as electrolytics were large physical devices and not common. Higher value capacitors were commonly encased in tar and enclosed in small cardboard boxes. Actual electrolytic capacitors came in the early thirties. In later battery sets and early AC receivers, networks of resistors and capacitors were all encapsulated in tar and were enclosed in a metal box that was bolted to the top of the receiver chassis. If a failure occurred, the entire component assembly was replaced as a unit.

One item slipped. Early grid leak carbon resistors were in glass tube cartridges. Lower-valued resistors were simply sections of carbon rod. Wires were wrapped around the ends of the carbon rod. They were painted, called "body dot and end" to reflect the coded resistor value.

> For a transmitter, you might look at TPTG circuits (tuned plate-tuned grid). They were usually assembled on a plank of wood and used 1/4" copper tubing for coils. Transmitters were free-running oscillators, crystals were either not available or a real luxury. Amazingly, it is possible to adjust a TPTG transmitter to make it essentially chirp-free and frequency stable, but you will need to operate it with a highly regulated power supply. Also, remember in the '20's that limitations with tube designs restricted popular use of shortwave frequencies. Receivers were either TRF (tuned radio frequency) or regenerative.

From: N1BUG
Topic: 10939 Message: 10954

Thanks Bill and Glen!

You answered a couple of nagging questions that had cropped up in my research.

I am familiar with grid leak resistors but wasn't sure about other early types.

Can we define "lower value" with regard to carbon resistors marked with the body-end-dot system? I found a reference to antique body-end-dot coded resistors that says the same number system applied that we use today. But if so, I have seen some that were in the hundreds of thousands of ohms? I recently saw a picture of one that had violet body, green end, yellow dot. I guess 750K would be low value compared to many grid leaks of the era. Oops... just saw one with a gray body, black end, green dot. Any info on what ranges these came in, or am I reading them wrong?

The high value capacitor information was new for me also. I had been trying to find out what a 1 uF capacitor might have looked like.

73,
Paul

I have some of these body-end-dot resistors in my stash that range from hundreds of ohms to several megohms. They date from at least as far back as the 1930's; I wonder when they first started appearing on the scene?

The resistors of the early-mid 1920s were in glass cylinders and plugged into a holder with clips, not just grid leaks, but smaller values as well, and usually had a paper label with the resistance value.

Hello Ron:
      Your improving on your videos. The lighting was very good by the way on your last one. Very imformitive too. I learned something that I didn't know on the Crosley Pup about the correct tube used in it. I too love your glass batteryset radio. If you remember a number of years ago I asked permision to use a photograph of it for our antique radio club web site. It is still there on the home page.

I too have a model 1000 and 3000 Zenith Transoceanic radios in my own collection. I lack the 7000 but I will get one. We have a club member in our club that have all 11 versions of the 7000 model! Keep the videos comming Ron. I enjoy them very much. Dave N2TJQ

Hello all--

The theme of the conference is :"The Conferences," a retrospective of conferences past. There's more in the January Journal--which has been mailed but, due to a change in printer and a change in mailing from first class to "non profit class," may not be in everyone's mail box until next month. We'll be back to a release in
month of issue next time.

Marc,

1) What radio is the theme for the contest?

2) And is anything being done to honor members
who were there at the beginning, 50-years ago? I
know of at least one, and there are probably a
couple more. They should be treated with a
special 50-year badge, and honored at our banquet.

And if this email motivates anyone to organize
the "honor the 50-year members", remember they
will most likely need additional time to make
arrangements to travel to Rochester. Invite them soon.

Perhaps some younger members could volunteer to
pick them up and bring them when they come. The
one I know lives 400+ miles away and doesn't
drive any distances and would need a ride both ways.

We could make this happen if we wanted to.

Hi John--

I'm not aware of any specific radio that will be featured. For instance I believe contest entrants will be encouraged to recreate their exhibits from past contests. Your idea of honoring 50-year members sounds very good to me, but I'm not the Convention Chairperson. I'll e-mail Roy Wildermuth and make sure he is aware of this message thread.

Cheers,
Marc

Ron another nice presentation on your Tri City radios and crystal sets! Yes th TRi City radios were crude like many other one tube regens. But they worked! I wouldn't mind myslef to get one for the area I live in here in upstate New york is known as the tri cury area. (Albany,Scenectady and Troy NY) The Lawrence radio was a great find too! I have seen one of that comapanies batterysets which was a five tube trf set. Please keep the videoas comming. Thank you Dave N2TJQ

10981. Kodel C12 Schematic

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-01-30 00:10:14 UTC
From: gifarmer1
Topic: 10981 Message: 10981

Hi,
I've got a Kodel model C12 battery set here that I'm working on that was missing the audio transformer and had loose wires. I put a correct Kodel transformer in it, and after tracing out the circuit I now think it is close to being wired correctly, or maybe it is correct since it does receive stations.

But, there are a couple issues. Using two UX-201A tubes it whistles a lot and is difficult to tune clearly on a station. If I use a UX-200A detector, the whistles are gone and it becomes easy to tune 4 or 5 stations (during the day, probably more at night) but our strongest station (WCCO)is heard softly throughout the tuning range.

Another issue is that if I connect a ground, the radio just hums, so maybe somethings not right? One ambiguity is that the battery posts are simply marked A-, A+, B+, and B+. I tested with 22.5 volts B+ to the detector plate, 45 volts B+ to the amplifier plate, B- connected to A+, and ground connected only to GND, but am not positive this is correct. I was wishing the radio had included instructions for connecting the batteries!

So, I'm wondering if anyone who might have one of these radios would be willing to compare my hand-drawn schematic with their radio?

You are correct on voltage to the 200 detector tube. Now most times the rf stages and the first audio stages B+ voltage is 67 volts and last audio is 90 volts. Since you stated that you have only two B+ connections you have only one voltage to use in the rf and audio stages. You did not say though what type of speaker connection you have. Is it a 1/4 in phone jack or two binding posts? If binding posts marked spkr then you can put 90 volts here and use 67 volts for rf and first audio. Now also ground should be connected to A-. That is the way all my 63 batterysets that I have is done. A good earth ground is the best too. Dave

Hi Greg,

You might try putting a 360pf variable capacitor in series with the antenna. I have found antenna coupling is much improved with many battery sets, and that many simple receivers are easily overloaded with too much RF. In fact, you might try attaching the ground with a very short antenna to see if you can come up with a combination that will eliminate hum.

The detector is regenerative, try backing way down on the detector filament control, especially to stop squeal. Squeal indicates the detector is oscillating. The optimum setting may be somewhat critical. The control may also influence the hum you are experiencing. Adjust the amplifier filament control for minimum distortion. Don't think of the controls as "volume" controls, although you can adjust volume, tune for best performance of the set at whatever volume comes out. I often connect the earphone output to a transformer which is coupled to an external amplifier.

You shouldn't get hum by connecting a ground to the cold side of the tuning coil. That may be from a ground connection in the power supply. For example, you might look for a bypass capacitor in the power supply which has been connected between one of the power leads to power supply ground. Also, the power supplies need to be well filtered. You should be able to connect the antenna ground to the A+/B- lead. Of course, a good ground will help.

A Crosley with a similar circuit works ok here with an external supply. Think I have a Kodel similar to a C12, but haven't fired it up.

Just reread my comments. I didn't mean to imply that a short antenna should be connected to the ground terminal. I was recommending connecting the ground (that Greg indicates generates hum) while using a short (or no) antenna on the antenna terminals. There shouldn't be hum, unless it is induced from the power supply and how it is connected to the receiver.

Another thought - a regen circuit is a very high impedance design. Make sure the receiver is operated well away from CRT's, power transformers, some power-strips with built-in inductive surge-arrest filters and other sources of magnetic fields. Fluorescent light bulbs, especially the replacements for incandescent bulbs can also be very noisy.

From: Mike Feher
Topic: 10987 Message: 10988

This could be tricky, depending on the actual material the dial is made from. If it is indeed a nice smooth composite like Bakelite, then it is easy, if it is earlier and made of the "mud" composite with a rough texture, then it is difficult. Those have been my experience over 40 years. I have used just about anything I can think of at the time. There are obviously crayons made for the purpose as well as "printers" ink which is rather thick. Unless you are very careful, ink is best used on only real smooth surfaces so you can wipe off the excess. With the old rough dials, the ink can find its way into holes and grooves and will never come out. On those, crayons are the best, and even then best to mask off where you do not want to apply it. If I can find some of the ink in the basement, I will let you know the manufacturer and the exact name. 73 - Mike

Topic: 10981 Message: 10989

Thanks to all who responded. I tried connecting the ground to the A+/B- connector and the sound completely cuts out, although I agree most sets connect that way. I also tried connecting ground to A- and that also killed all stations. I also went around the house to make sure no dimmer switches were on since I've got one dimmer switch that has definitely given me trouble in the past, but they are all off. I am using 22.5 and 45 volts since it is only a two-tube set designed for headphones, not a speaker. It has two pin jacks labeled 'Phones', not a phone jack.

However, although I've got a good supply that has worked fine with countless battery sets in the past, I tried disconnecting the supply and using batteries. With batteries, it works much better. With no ground, and the filament control turned up for loudest volume, it is perfectly quiet between stations and I was able to easily get 5 stations with good clear tone. Connecting ground to the ground post on the radio increased the volume dramatically and introduced some background noise, but the noise is gone when tuned to a station, however the ground also caused the tuning to be much less selective. I tried also connecting a wire from ground to A+, then to A-, and both caused the sound to cut out. Best overall performance seems to be with the ground disconnected.

I'm still not absolutely sure that the radio is wired exactly as original, and am not sure why it had problems when using the power supply, but it does work when using batteries.

Greg,

Is it possible the capacitor from the cold end of the coil is leaky or shorted, or, as you suggest, the set has been rewired? I wonder if when you connect the ground to A+/C- whether the +22 volts drops. If it does, it may be because of a shorted or leaky capacitor.

The set I thought was a Kodel turns out to be a Crosley. It is similar, except the coil is variable and the two filaments are tied together to a single filament control. It too has had wiring changes and one side of the capacitor (a clam shell assembly) is only wired to the antenna post. I would guess the other side, now open, should be connected to the coil primary as in your set. This set has a primary/secondary coil with variable coupling and switched coil taps.

However, although I've got a good supply that has worked fine with countless battery sets in the past, I tried disconnecting the supply and using batteries. With batteries, it works much better. With no ground, and the filament control turned up for loudest volume, it is perfectly quiet between stations and I was able to easily get 5 stations with good clear tone. Connecting ground to the ground post on the radio increased the volume dramatically and introduced some background noise, but the noise is gone when tuned to a station, however the ground also caused the tuning to be much less selective. I tried also connecting a wire from ground to A+, then to A-, and both caused the sound to cut out. Best overall performance seems to be with the ground disconnected.

I'm still not absolutely sure that the radio is wired exactly as original, and am not sure why it had problems when using the power supply, but it does work when using batteries.

Subject: Re: [AWA] Kodel C12 Schematic

Just reread my comments. I didn't mean to imply that a short antenna should be connected to the ground terminal. I was recommending connecting the ground (that Greg indicates generates hum) while using a short (or no) antenna on the antenna terminals. There shouldn't be hum, unless it is induced from the power supply and how it is connected to the receiver.

Another thought - a regen circuit is a very high impedance design. Make sure the receiver is operated well away from CRT's, power transformers, some power-strips with built-in inductive surge-arrest filters and other sources of magnetic fields. Fluorescent light bulbs, especially the replacements for incandescent bulbs can also be very noisy.

Bill

Subject: Re: [AWA] Kodel C12 Schematic

Hi Greg,

You might try putting a 360pf variable capacitor in series with the antenna. I have found antenna coupling is much improved with many battery sets, and that many simple receivers are easily overloaded with too much RF. In fact, you might try attaching the ground with a very short antenna to see if you can come up with a combination that will eliminate hum.

The detector is regenerative, try backing way down on the detector filament control, especially to stop squeal. Squeal indicates the detector is oscillating. The optimum setting may be somewhat critical. The control may also influence the hum you are experiencing. Adjust the amplifier filament control for minimum distortion. Don't think of the controls as "volume" controls, although you can adjust volume, tune for best performance of the set at whatever volume comes out. I often connect the earphone output to a transformer which is coupled to an external amplifier.

You shouldn't get hum by connecting a ground to the cold side of the tuning coil. That may be from a ground connection in the power supply. For example, you might look for a bypass capacitor in the power supply which has been connected between one of the power leads to power supply ground. Also, the power supplies need to be well filtered. You should be able to connect the antenna ground to the A+/B- lead. Of course, a good ground will help.

A Crosley with a similar circuit works ok here with an external supply. Think I have a Kodel similar to a C12, but haven't fired it up.

Subject: [AWA] Kodel C12 Schematic

Hi,
I've got a Kodel model C12 battery set here that I'm working on that was missing the audio transformer and had loose wires. I put a correct Kodel transformer in it, and after tracing out the circuit I now think it is close to being wired correctly, or maybe it is correct since it does receive stations.

But, there are a couple issues. Using two UX-201A tubes it whistles a lot and is difficult to tune clearly on a station. If I use a UX-200A detector, the whistles are gone and it becomes easy to tune 4 or 5 stations (during the day, probably more at night) but our strongest station (WCCO)is heard softly throughout the tuning range.

Another issue is that if I connect a ground, the radio just hums, so maybe somethings not right? One ambiguity is that the battery posts are simply marked A-, A+, B+, and B+. I tested with 22.5 volts B+ to the detector plate, 45 volts B+ to the amplifier plate, B- connected to A+, and ground connected only to GND, but am not positive this is correct. I was wishing the radio had included instructions for connecting the batteries!

So, I'm wondering if anyone who might have one of these radios would be willing to compare my hand-drawn schematic with their radio?

Again Ron thank you for the video on your Federal model 61. Federal with the models 57,58,58DX,59,60,and61 were quite impressive looking sets. Federal did market their sets to the upper society market segment. Many of their magizine ads were very fancy.
Back in themid 1990s at the Rochester hamfest the AWA had a exihbit in the dome that was Federal radios. They had several models there which included the Federal crystal set, a model 58DX, model 60, and one of the Federal model Orthosonics. All in great condition. This was the first time as far as the big fancy Federal models I got to see one. Like you said to many of us batterset collectors haveing one of the big Federal models would be one of the highlighted desired radios to have. I would like to have any Federal model in my collection! Thanks aagain Dave N2TJQ

Hi Roy,

Good talking to you on 75M AM last night.

I'm glad to see the AWA sringmeet is the weekend following NEARFEST this year - I may just make the trek from Maine!

It's always a good idea not to collide with NEARFEST, since it it is one of the Northeast's largest, if not THE largest, of Hamfests - it attracks hams as well as vintage radio enthusiasts from all over the Northeast. There is even a guy from CA who makes a regular appearance. NEARFEST is one of the better hamfests for selling/buying vintage amateur tube stuff, and there are often antique broadcast/SW sets and vintage phonographs as well. Good people, good times, lots of interesting stuff, and it takes both days to take it all in.

Sorry if I sound like a commercial, but I'm hopelessly hooked! I've been attending NEARFEST twice/year since its inception in (IIRC) 2007 and before that, it's predecessor, Hosstraders, since 1983. Never missed one since that time.

Bruce, and all of AWA's friends,
I have been looking at Kutztown as a model for our Spring Meet. The AWA Spring Meet is ALL about swapping and trading. The entire model is based upon buying and selling and we hope to attract a ton of folks. Just for the record, there will be the AWA Auction at which we will be selling items from Museum overstock as well as estates on consignment and item entered from those attending. In addition there will be a presentation by the The AWA Curator Bruce Roloson on the New AWA Museum. There will also be a large screen showing of "Empire of The Air". Rochester is home to one of the Largest Ham Radio Shows, The Rochester Hamfest. So consider the potential amount of material that may be in our Flea market. With a ZERO entry fee and considerable publicity, this event will hopefully become a major destination for the collector and enthusiast. May 7, 2011. Bloomfield N.Y. At the Bloomfield Elementary School. Visit the AWA Website beginning in March, 2011 for details. Remember, you are the key to this event.

>

>

>

> Hello All.Th_,_._,___The AWA Spring Meet in Bloomfield is destined to become one of the largest Radio Events/Fleamarkets/Hamfests in Upstate NY. This will be a PURE SWAPMEET/FLEAMARKET AND HAMFEST. GENRAL PUBLIC WELCOME AT NO COST!! For the first time Collectors and Amateur Radio Operators can get together for buying and selling and have a look at the AWA Museum. For Free ! That's right, no cost for buying or selling. Inside tables will be sold at AWA Cost but no charge for outside selling and the General Public is WELCOME. Bloomfield is located adjacent to Rochester NY and is a very short drive. So Rochester Hams and Collectors, EVERYBODY-put this on your HAMFEST Calendar! This is only the beginning of our celebration of 50 year of AWA Conventions. In Charlotte next month, I will be announcing the 50th Anniversary AWA Convention. This year we will be offering some of the most exciting innovations we have ever presented. Make sure that you see the

Hand-held radio/phone or a Western Electric 34A carbon hearing aid
http://www.hearingaidmuseum.com/gallery/Carbon/WesternElectric/info/westelect34a.htm
??

(The WE hearing aid was meant to be placed in a front pocket and had an
earphone, so why would it be held to one's ear?)

Have fun,

Duncan
K2OEQ

-------- Original Message --------

The Internet is buzzing with tales of a mobile phone-using
'time-traveler' caught on film at the premiere of Charlie
Chaplin's 1928 film The Circus. The clip can be viewed on
YouTube at http://www.youtube.com/watch?v=Y6a4T2tJaSU&feature
<http://www.youtube.com/watch?v=Y6a4T2tJaSU&feature> ,
appears to show a bulky woman dressed in a black coat and hat
speaking into some kind of device held up to her left ear as
she walks past a zebra outside Hollywood's Chinese Theatre.
The odd footage was first spotted and posted online by
George Clarke, a Belfast film-maker, in the extras on a
Charlie Chaplin DVD boxset.

Speculation on the woman's true identity is rife. Is she
listening to a miniature radio or adjusting a portable ear
trumpet? But if so, why would she appear to be talking?

11028. I was Raised on Cowboy shows

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-03-05 22:45:24 UTC
From: John Dilks, K2TQN
Topic: 11028 Message: 11028

Howdy Pardners,

I was Raised on Cowboy shows, first on the radio and later on, on our used 7" Motorola TV. The shows always had singing Cowboys and I can remember singing along. It was a happy time in my life.

A few years ago I happened on a web site that played the vintage Cowboy songs, it was called "Range Radio". Evidently music regulations stopped them from broadcasting after about a year. And for the next couple of years, the web page existed, but no music.

Today I checked the link again and found it is now associated with KSMA-AM in Lompoc, California. "Range Radio" is alive again, playing the Cowboy classics like Tex Ritter, Roy and Gene, and some newer Cowboy-western music too.

So if you too like Cowboy music, listen in:

Yeah, NOISY;2- 1 million pounds thrust solids,each. We test fired some upside down at COYOTE CA. Did one at night and cloud drifted over to mount Hamilton and spoiled a special night's viewing at their telescope. THEY WERE PISSED!!.. Also a tech did not turn some switches to run the thrust vector control system. Aerospace Corp went nuts. Was a true STATIC test!! I had figured out how to use calibrated load cell sets at 90 degrees to measure the thrust vectors. We used Sulphur Dioxide (4 at 90 deg.) gas jets to steer the main rocket thrust- a liquid amplifier.KZ

I was living in South San Jose in the early 60's the first time a rocket motor was tested at Coyote! Even though there was an announcement about it no one had heard or read about it.

We were sitting in our yards when we heard this terrible noise and saw the flames down in the Coyote hillside! Our initial impression was that the whole site had gone up in flames!

11036. Wanted: Parts to Build an HBR Receiver

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-03-10 03:21:21 UTC
From: whitebear1122@comcast.net
Topic: 11035 Message: 11036

Want to buy some Miller IF transformers and parts for an HBR receiver project. I'm looking to build an HBR-13 from scratch. Would you please look in your junk box and help me out? I'm really desperate to find those IF transformers and BFO transformer. I am looking forward to building my own radio and would appreciate your help.

(2) Miller 1730 1800 Kc IF transformer
(4) Miller 1709 or 1710 10 KC IF transformer
(1) Miller 1711 100 Kc BFO

Junker or uncompleted HBR receiver for parts
Eddystone slide rule dial
National HRO gear box that is inline rather than right angle
BC453 radio or ARC5 R23 190 Kc - 550 Kc receiver for a Q5'er project or to get the 100 Kc IF's

Thanks very much! 73, Scott WA9WFA

I was wondering if someone in the group might have a National S-101 that is gathering dust and would be willing to sell. Officially, it's a Screen-Grid Detector Coupler used between a regnerative detector and the AF stage and the same one used in the SW-3 regen....consists of a high value choke, fixed C and R, all inside a small transformer shell.

Tnx

Steve

Hi,
Has anyone done a internal component check recently on the S-101 values ?
I wonder how that capacitor and resistor are aging?

If you need values, I have a new one in the box, somewhere, and would be happy to break it out for measurement purposes.

Cordially,
Bruce J. Howes

I can usually recceive WBT that time of day - I'll try to tune you in.

Ron, would you know of any antique radio meets or hamfests in the general vicinity of Columbia SC on the weekend of April 22/23/24? I'll be there visiting my brother's family then.

WBT 1110 comes in loud and clear streaming from their web page. Anyone with computer, iphone etc should be able to listen even if out of reception range. Not as nostalgic though as off air.

I checked to see if I could receive WBT on 1110 here in central Maine. No problem! During the day they are mostly readable with some co-channel interference. As darkness approaches they completely command the frequency, putting a HUGE signal in here. Of course I cheat a little, using 160 meter receive antennas.

11053. Help with specifications of RCA MI-6279 "Aerodynamic" microphone

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-03-16 04:15:18 UTC
From: vollumscope
Topic: 11053 Message: 11053

Howdy everyone!

I'm hunting for specifications of a vintage RCA dynamic microphone.
I'm not having much luck on the hunt.
Web search yields "Lo-Z dynamic restricted"

Might anyone out there have some more specific
info on this mic?

My guess is it's circa the early 1940's...

It's a "bullet" shaped chromed microphone.
Internally it's a dynamic transducer with what looks like an ALNICO magnet and a small matching transformer clapped onto the transducer assembly.

RCA's nomenclature is "Aerodynamic" MI-6279

Many thanks for any specific info in advance.

Regards,

Robert

Caught about the first 15 min driving to a concert up here.

I was impressed how you & John went right into talking about
collecting and the conference without alot of explanations and
definitions, it worked well.

BTW, WBT was featured in the last issue of 'Radio World,' or at least
the new EAS installation in the basement was:
http://www.rwonline.com/article/114388

While on the RWonline site, also saw an article about QSLing from Jerry Berg:
http://www.rwonline.com/article/115712

I've downloaded Hour2 and will try to hear it all later on today.

11060. WTB Parts for Receiver Projects - Can you Help me Out?

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-03-19 14:05:11 UTC
From: whitebear1122@comcast.net
Topic: 10389 Message: 11060

While I'm collecting parts to build an HBR receiver, I've decided to build an intermediate receiver to gain some experience preparing a chassis, drilling and tapping, hole cutting for the tube sockets, etc.. wiring, front panel construction, etc..

I'm thinking of building the 2X4+ Superhet. It's a early 60's or late 50's design, 5 tube not counting the OB2 regulator. It uses some shielded adjustable RF coils in the IF instead of regular IF transformers. My junk box is empty in the coil department so I need to start building that up. I continue to be frustrated at not being able to find the coils and IF's for these projects. I sure miss the good ole days when the parts were available at the local radio store.

They call out these values but anything in the ballpark will work 64-105 uf and 36-64 uh adjustable shielded chassis mounted coils. The article called out "North Hills 120-F in North Hills S-120 shield can". I've never heard of those folks before. I'm figuring there are some Miller or Millen or Meissner equivilent out there.

I'm also looking for some 1800 Kc IF's from the 3-6 Mc ARC-5's, plus the BFO from a BC-453.

Also looking for some Miller 612-M1 IF's, 012-M5 BFO transformers.

Still looking for the Miller 1709, 1710, 1711.

Also looking for any junker or partial build or rough HBR's to use for parts.

Also looking for a suitable small cabinet with a lid for the HBR project. I'm still figuring out the sizes, in the 15"wx11d "x10 h " catagory and 21"w x11"d x 10" h

Thanks, 73, Scott WA9WFA

From: Roy Wildermuth
Topic: 11065 Message: 11067

Congratulations to CC-AWA and Ron Lawrence and his staff for a fine 2011 Conference. As usual we were treated to a well done event with Southern Hospitality. Our Thanks !
Now it is time to kick off the 2011 Rochester Convention. The Website and registration will open May 15, 2011.
Among the many new items for August, The AWA is pleased to announce that the General Public will be admitted to the Rochester Flea Market on Friday and Saturday at no charge. However admittance to forums and to the Auction will require full Convention registration. This decision was made in response to numerous requests over the years for such a policy.
Remember that flea market spaces are now only reserved for preregistrations. Walk-ins receive spaces based upon first come, first served._,_._,___

Hi Alex,

I've got a 5BP1 I bought when I was in junior high - built a simple 'scope around it then from the Handbook. The scope was disassembled long, long ago - was planning to build a more elaborate one, which never happened - and I've been storing the CRT ever since.

Actually, if I ever do something like this, I'd probably use the power supply and CRT from a boatanchor 'scope, build the sweep and video circuits externally (or gut the rest of the scope and build them inside), and just have a video input from a converter box, VCR, or DVD player - since there's no more analog TV to receive off the air.

Oh no! I think another project has been added to my already too-long list!

11081. Intro and Federal 59 tuning range question...

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-04-07 13:02:44 UTC
From: bwerts@vnet.net
Topic: 11081 Message: 11081

Hello All!

I'm a new member to the group, encouraged by my local mentor, Ron Lawrence. I'm smitten with early "battery period" technology. I recently attended the Charlotte Antique Radio conference held a few weeks ago and had a great time, met some great folks--yes, I was the kid wandering around with a smile on his face seeing all of the gear spread out on all of those tables outside!

So I came home with a wonderful Federal 59, not quite the beauty of the 61 here elsewhere in town!, but certainly a winner in my book! (You don't recall seeing the 59 at the conference? :-)) I have had a little quality time with this radio and I have a question about the tuning range, maybe you can help me:

According to the manual I received with the radio, the range of coverage for the radio is stated to be from 550 - 225 meters (approx 545 - 1330 kHz). I've been able to determine that the Secondary Wavelength dial at "0" is picking up stations around 1030 kHz and when I run the dial to "100" I can indeed get down to the 550/540 kHz range. I notice that when I dial pre-0 and post-100 I end up getting nothing.

I am currently using a 90ft longwire out in the back yard that is grounded with a 4ft copper rod before being run into the house with a length of RG-58. I have looked on the RF Coil and the number markings have been rubbed off. I have to assume that it is a No. 35 (225-550 meters).

What I would like to know is if someone can help me get past the 1030 kHz "barrier" that I seem to be running into. Any suggestions?

Thanks Much!
Blake

Hello All!

Hello Blake:
Welcome to the group! You sure are one lucky fellow to get a Federal 59! Those early Federals are sure nice fancy radios. Now the radio is a TRF circuit type radio. So you have two tuning dials to tune the radio. You have two coils there too. The antenna, single rf stage with the schematic showing the atenna and rf stage ganged together to a two section tuner, then the detection stage. If I remember the tapped coil is the antenna coil on that model.
Now in order to receive above 1035 kc's you would have to wind additional wire on the antenna coil makeing the last tapped section of it longer. I don't recomend it for a newbie to do it.! Plus you can loose some of the radios value doing it for the radio is no longer original. I have many of these early battersets myslef which like your Federal tunes to about where your Federal does. Others I have go to 1300kcs or all the way down to 1500 kcs. Well I'm sure others will tell you about the same thing I have but they might be able to tell you other ways about increasing the range of your Federal. Dave N2TJQ

Topic: 11081 Message: 11083

A lot of these very early radios have limited high-frequency coverage, given that initial broadcasting was on only 360 and 485 meters. There was no incentive to go higher in frequency. I have a Crosley Ace 5 that won't tune above about 1300 kHz.

The capacitance of the RG-58 may also be influencing the input tuned circuit. You might try a short piece of plain wire as the antenna.

A fine find!

Ludwell Sibley

Subject: [AWA] Intro and Federal 59 tuning range question...

Hello All!

I'm a new member to the group, encouraged by my local mentor, Ron Lawrence. I'm smitten with early "battery period" technology. I recently attended the Charlotte Antique Radio conference held a few weeks ago and had a great time, met some great folks--yes, I was the kid wandering around with a smile on his face seeing all of the gear spread out on all of those tables outside!

So I came home with a wonderful Federal 59, not quite the beauty of the 61 here elsewhere in town!, but certainly a winner in my book! (You don't recall seeing the 59 at the conference? :-)) I have had a little quality time with this radio and I have a question about the tuning range, maybe you can help me:

According to the manual I received with the radio, the range of coverage for the radio is stated to be from 550 - 225 meters (approx 545 - 1330 kHz). I've been able to determine that the Secondary Wavelength dial at "0" is picking up stations around 1030 kHz and when I run the dial to "100" I can indeed get down to the 550/540 kHz range. I notice that when I dial pre-0 and post-100 I end up getting nothing.

I am currently using a 90ft longwire out in the back yard that is grounded with a 4ft copper rod before being run into the house with a length of RG-58. I have looked on the RF Coil and the number markings have been rubbed off. I have to assume that it is a No. 35 (225-550 meters).

What I would like to know is if someone can help me get past the 1030 kHz "barrier" that I seem to be running into. Any suggestions?

Thanks Much!

Thanks Dave for the welcome.

So I have to come clean and announce that the Federal was an arrangement that I made with another radio guy who knew I was going to be attending the conference. Those of you who are scratching your heads, wondering how you could have missed the radio, fear not. ;-D

I follow what you are saying about the antenna coil; however, the manual says nothing about needing to do anything to break the 1035 "kc" barrier. In fact, I've recently learned that I should be able to replace the "RF Coil" with a different one to be able to tune in other bands:

Federal #35 RF coil for 225-550 meters
Federal #31 RF coil for 500-1000 meters
Federal #29 RF coil for 175-300 meters

Would it still make sense to require modifications to the antenna coil when swapping out for another one of the RF coils?

Thanks!
Blake

I don't know if it helps, but this same longwire antenna has been used with great success on an Atwater Kent model 20, Radiola III, and a modern Sony shortwave portable.

Topic: 11086 Message: 11086

Hi

For my 40m inverted Vee, for the radiating elements if I were to use twinlead 300 Ohm instead of single bare conductor, and simply cut one conductor of the twinlead on each side of the Vee for 20m, and the other conductor cut for 40m?

Would there be any disadvantage if instead of using 300 Ohm twinlead I were to use low cost 22ga clear untwisted speakerwire, not breaking the webbing between the parallel conductors?

Would this work? Has anyone tried it? Or would it be a waste of money?

Hi Geo,

IHMO, in both cases, the wires are too close to each other. You need at least 3/4" spacing, preferably over an inch.

Bill

Perhaps more important, when installed, twinlead or drop wire will twist, eliminating the separation between wires.

11089. Need Kodel Audio Transformer

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-04-10 02:28:38 UTC
From: Ted Miller
Topic: 11089 Message: 11089

Hello All,

I need an audio transformer for a Kodel Model C13, three tube, regenerative battery set. The transformer is black, the windings are covered with black paper. It does not have binding posts as the connections are made by soldering to the winding's termination wires. It has the name "KODEL" on the top of the lamination stack.

It does not need to have continuity. I suspect the same audios are in all the Kodel battery sets Ca.1925.

Please look through your junk treasures and advise if you locate one. This will help me complete the restoration of my little Kodel.

Ted Miller

From: geo
Topic: 11086 Message: 11090

I took down my 1 week old antenna and I rebuilt it all last night, stayed up until midnight.

I couldn't find any 300 Ohm twinlead to save my life, so I ended up using....yup....Speaker wire again!

So using some PVC pipe and plenty of speaker wire, I made a 2 band inverted Vee, cutting each antenna to it's calculated length.

At the end of the 20m antenna I'm suspending it below the 40m antenna with a 2ft long piece of PVC. Seems to tune up fine!

Managed to make 3 QSOs this evening on 40m with it, got 10 over sig reports out to South Carolina and Iowa but just an S7 out to Arkansas. TONS of QRM this evening on 40.

I'm only running 120 watts into a tuner. No additional power amplification here.

I'll try 20m in the morning and see how it goes.

Leo Meyerson, W0GFQ, a Silent Key

Leo Meyerson, W0GFQ, in 2010.
(Photo courtesy QCWA Chapter 154)
Just a few weeks after celebrating his 100th birthday, ham radio legend Leo Meyerson, W0GFQ (and previously W9GFQ), has passed away. The announcement was made by Quarter Century Wireless Association (QCWA) President Bob Roske, N0UF, on the organization's website.

"It is with a profound sense of loss," Roske wrote, "that I report Leo Meyerson, W0GFQ, became a Silent Key last evening 4/13/2100 at 9:50 p.m. in the Eisenhower Hospital, Rancho Mirage, CA."

Meyerson owned and operated World Radio Laboratories in Council Bluffs, Iowa, which built the "Globe" line of amateur radio transmitters in the mid-20th century. Better known models included the Globe Scout, Globe Champion and Globe King lines.

A brief profile of Meyerson in honor of his 100th birthday appears in the March issue of CQ magazine.

To the Group

The April Journal will be out at the beginning of May. It has been delayed by the production of our brand new electronic publication The AWA Gateway. Available now on our website www.antique wireless.org, it's free to all. Content is generally much more basic then that of The AWA Journal; it's intended to interest and engage people in our hobby. Recommend it
to interested friends. Your comments and ideas welcome.

The Gateway will be a quarterly like the Journal and will be released between Journal issues. Our
timing should be back on track with the release of the July Journal.

Since the April Journal will not be out in time to give notice about our spring meet, I'll send out information on the meet, just as it appears in the April Journal, in a separate posting.

11097. FOR SALE.....Complete Set of 31 Issues of "SCOTT NEWS" Radio Bulletins from the EH Scott Historical Society

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-04-16 18:04:31 UTC
From: Robert S.Ross VA3SW
Topic: 11097 Message: 11097

Hello Everyone:

I have for sale the Following Radio Literature.....

COMPLETE SET of 31 Issues of the SCOTT NEWS Radio Bulletins published by the EH SCOTT HISTORICAL SOCIETY. The First Issue is Dated June 1992 and the Last and Final Issue is Dated December 1999. These Bulletins were published QUARTERLY and are 100 % SCOTT RADIO Information. Included in these Bulletins are Many Photos of Classic SCOTT RADIOS, Technical Articles, Restoration Tips, Old Ads, Scott Radio History, and General Information pertaining to all the Classic Scott Radios!! These are Large Sized 8 1/2" x 11 " Bulletins printed on Glossy paper....Real Nice Bulletins!!! They have been stored Flat in Plastic Pages and are in CLEAN LIKE NEW CONDITION!! They will be shipped in the same Plastic Sleeves they have been stored in. If you are a Scott Radio Collector, Historian, or just have an interest in some of the Greatest Radios ever Produced....you will enjoy reading these Bulletins!! The EH Scott Historical Society folded shortly after the Last Issue of this Bulletin was published in 1999. These Bulletins are hard to find now...and this is a COMPLETE SET....all in one place!!

Also included in this package will be .....

8 ISSUES of the PUETT ELECTRONICS - "Antique Radio Topics and Classic Radio Newsletter".

This is an Antique Radio Bulletin that was published by PUETT Electronics in Texas in the Late 1980's and 1990's. It covered many areas of Antique Radio Collecting....but was very heavy in SCOTT RADIO!! These are also 8 1/2 " X 11 " Bulletins, and have Photos, and General Info as listed above. Also Clean and Like New and housed and shipped in Plastic Sleeves.

If you are a looking for a Compendium on Scott Radios..the above Package will fill the bill!!!

PRICE for the Above package of 39 Bulletins is $100.00 USA Dollars...Shipped postpaid by me Anywhere in NORTH AMERICA. Payment is OK by USA Postal Money Order.

If you are interested in this Literature...or have any Questions...Please email me @..... va3sw@...

I have a TON of RADIO LITERATURE that I will be liquidating in the Future...and I have given up on EBAY!!!! I will list a Bunch of Great Radio Literature as I find the time...and hope to get this into the

Hands of Collectors who Appreciate it...without the Hassles of EBAY!

11098. FOR SALE.....TRANSISTOR RADIO COLLECTOR Bulletins 126 Issues .....Complete Set of Transistor Network + MORE!!!

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-04-16 20:23:50 UTC
From: Robert S.Ross VA3SW
Topic: 11098 Message: 11098

Hello Everyone:

Here is another Listing of Radio Collector Literature featuring TRANSISTOR RADIO COLLECTING. This is a Group of Radio Bulletins and Booklets with a wealth of Information on POCKET TRANSISTOR RADIO COLLECTING. There is a Total of 126 Pieces of Literature included in this group. All Bulletins are in CLEAN Like New Condition and have been stored Flat in PLASTIC SLEEVES. They will be shipped in the same Plastic Sleeves.

Included in the group is the Following.....

1. A COMPLETE SET of Transistor Network Bulletins as published by MARTY BUNIS, the Author of many Antique Radio Guides, including guides for Transistor Radio Collectors. There are 89 Issues in this complete set spanning APRIL 1992 to December 1999. These Bulletins are loaded with PHOTOS, GENERAL INFO, OLD ADS and everything you need to know about collecting Pocket Transistor Radios!! Also included are Classified Ads showing Prices throughout this time period. These are Smaller Sized Booklet Bulletins similar to the AWA Journal's Size.

2. 17 Issues of Electronics Collector from January 2000 to May 2001. This was the Publication that followed up where The Transistor Network left off when it folded in December 1999. These are smaller Sized Booklet Bulletins like the Transistor Network.

3. 6 Issues of the Transistor Radio Collector from January 1998 to October 1998. These are Larger Sized 8 1/2 " X 11" Bulletins. Same type of Info as the Transistor Network.

4..... 8 Manufacturer's BOOKLETS Published by ERIC WROBBEL of California from 1994 to 1997. Eric was a Key Early Collector of Pocket Transistor Radios and Very Knowledgeable about Transistors....Long before the Collecting Craze Started!! These Booklets include COLOUR PHOTOS of the Radios made by these Manufacturers. General Info and Old Ads included. Included in this group are Booklets on the Following Brands of Pocket Transistor Radios.....

a) AMERICAN Shirt Pocket Transistor Radios

b) TOY CRYSTAL Radios

c) GLOBAL and ZEPHYR Transistor Radios

d) REALTONE Transistor Radios

e) STANDARD Transistor Radios

f) TOSHIBA and TRANCEL Transistor Radios

g) REGENCY Transistor Radios

h) SONY Transistor Radios

5. 6 Illustrated Price Lists published by ERIC WROBBEL from 1994-1995. Complete with Photos and Prices for many Popular and Collectible Transistor Radios of the day.

This stack of Early Transistor Radio Literature is 4 Inches High....and contains a wealth of Information for the New Collector or Seasoned Collector alike!!!

PRICE for all 126 Issues is.....$120.00
POSTPAID anywhere in NORTH AMERICA.

Payment by US POSTAL MONEY ORDER PLEASE.
****

To Purchase these Bulletins or any Questions......Please Email me at..... va3sw@...

Stay tuned for more Great Radio Literature as I find time to List it!!! There is a LOT more to come!!! I'd like to get this Literature into the Hands of Collectors and would rather sell to Collectors on the Lists than through EBAY. Less hassles for all parties involved and Fellow List Members get first shot at obtaining this Literature!!

Hello Everyone:

Listed Below is a Nice Run of HEATHKIT Catalogs (26 Catalogs)
spanning the Years 1969 to 1979. Included are a group of CANADIAN
Edition Catalogs as well as the Standard USA Editions!! The CANADIAN
Catalogs were Printed in much smaller quantities....and are Much Harder
to find. Generally they are much DIFFERENT than their USA counterparts
as well. The 1974 USA and Canadian Catalogs look entirely different!!
All of these Catalogs are in NICE SHAPE...they are not MINT....but there
are NO DOGS. ALL are in CLEAN CONDITION, and have been stored in
Plastic Pages for many Years and have been looked after!! Not all
Catalogs have Order Forms in them. At one time I had OVER 250 Different
Heathkit Catalogs in my Collection going back to the Late 1940's. The
Earlier ones have been sold...and I am now working my way up through the
years starting at 1969....that's the Oldest one I have left. Although
NOT Listed here...I also have a Large Group of Catalogs from the 1980's
as well. If these sell...I will list the 1980's Catalogs.........

POSTAGE on Single Catalogs is $ 3.00 Per CATALOG..If you buy MORE than
one.....we can Group them for a Better POSTAGE PRICE. They will be
shipped FLAT with a Cardboard Protector.

PAYMENT is by US POSTAL MONEY ORDER ONLY.....No CHECKS...and NO PAYPAL.
^^

Please EMAIL me at.......... va3sw@... to RESERVE any of these
Catalogs.

Hi Ron,
We had a tornado about 2 miles away from us, in the Riverdale-Croatan area southeast of New Bern. Several homes leveled, cars thrown across the road, etc. No major injuries, fortunately.
see the newspaper article of this AM at:
http://tinyurl.com/43lyyc8
If you watch the video there, taken by a newspaper reporter driving thru, you can see some of the damage. He didn't drive into the worst area, at the end of the video, but you can see it a bit. We live in the Riverdale area, and heard the sirens for much of the hour that we were without power Sat. nite.
73,
Al, W8UT

11105. Switch Needed

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-04-20 10:34:40 UTC
From: dadellers
Topic: 7430 Message: 11105

I need a off/on switch for a 1920s battery set radio. A push pull style or a ball metal toggle type will do. (single pole) It has to be a front panel mount type with a quarter inch diameter threaded stud with nut and washer to mount to the panel. Check your parts or junk box and email me back if you have one you want to sell. Thanks Dave N2TJQ

11110. Millen 90800 Transmitter

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-04-23 12:25:26 UTC
From: Gary H. Harmon, Jr.
Topic: 11110 Message: 11110

I acquired one of these last week, cleaned it up, and repaired a broken variable with J-B Weld. I notice though there is evidence of missing wires to one of the coils. Does anyone have a schematic or a place to find one? Is there a site or a list of the coils needed for the various bands? Any other info??

11113. Millen 90800 Questions

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-04-23 22:03:00 UTC
From: Gary H. Harmon, Jr.
Topic: 11113 Message: 11113

I did find a schematic on the net dated 1945 as well as pictures from two different sites. The two sites and my unit do not agree in the wiring department. Does anyone have a 90800 they consider stock that they could examine and provide me additional details and maybe pictures? One thing I need is the connections to the coil with 4 connections.

I could also use some extra coils if anyone has extras. Yea I know but it never hurts to ask.

Thanks.

Hello Fellow Thrill Seekers !
I am looking for an AWA member in Rochester Minnesota to help me with a Museum Project. We have acquired by donation a T-368 transmitter. am attempting to arrange it's shipment to Rochester New York. I am hoping to find someone who would be willing to help me with crating it up and working with the trucking company at that end. I am not looking for someone to transport it, although I would entertain ideas. If there is anyone who can help, please let me know.

Ludwell Sibley
****

Sadly it is not a new concept.

As of 1976 copyright law protects all written documents, even your grocery list! They may not be copied without the permission for 70 years after the death of the creator or, if corporate, for 120 years after creation. (if the source is not known, 120 years after it was created and even more complicated if copyrighted 1923-1976).This means that it is technically practically impossible to legally share original documentation regarding the entire history of radio.

http://copyright.cornell.edu/resources/publicdomain.cfm
(http://copyright.cornell.edu/resources/publicdomain.cfm)

If this seems unreasonable, write to your congressman. A waste of time though unless you can out bid Sony and Disney.

Of course none of this matters unless money is involved. No one is going to spend thousands of dollars in legal fees to test a case in court unless tens of thousands of dollars are at stake. That's why the Internet is mostly free.

Still it means that much of the activity on the Internet violates the law and reinforces a disrespect for the law in anyone who cares to find out what the law is. It also inhibits the activities of archives, museums, and libraries, with their endowments and legal charters to protect. This makes it hard to promote interest in a subject by making source materials widely available. In the AWA library there are tens of thousands of original documents regarding the history of radio which you will only see if you visit or submit a specific formal request for personal use.

However, as a Collector's organization, perhaps AWA falls on the side of the media conglomerates. All of your original documents are of greater value if the only way someone can see them is to visit your collection or buy them at auctions.

As one who believes that the future should build on the past I feel rather frustrated by the situation. I wonder how other AWA members feel about it.

Hi Mike,

Copyright has its problems and this will continue until the money doesn't matter anymore. By then, nothing else will matter either.

And the last news story will be about the last "celebrity" who died, written by the last so-called newsman, printed on the last piece of paper (made from the last Lorax tree), and it will be (C).

But I agree, write your Congressman.

I completely agree. Copyright was never intended to give corporations a
permanent monopoly on published work, and the big companies like Sony
and Disney have completely perverted the intent of the law. A very
frustrating situation for researchers.

From: Dave
Topic: 11127 Message: 11127

Hi:

My name is Dave, callsign VY2AC located on Prince Edward Island on the east cost of Canada.

One of my passions is running my telephone museum:
http://www.islandregister.com/phones/museum.html

And rebuilding teletypes for the museum:
http://www.qsl.net/vy2ac/rtty.html

I am in the process of trying to set up a telegraph display in the entrance-way to the museum, where my several working teletypes are located. It will be a small display for now, beginning with a Western Union 8A Sounder, and a Speed-x key (mine from my early Ham radio days), and a so far unidentified key coming from a gentleman in Western PEI.

I have just recently been forced to take medical retirement from my employer, and though I won't be able to do a lot, and it comes also as a financial set-back, but it will allow me more time for my hobbies!

Dave

Wlcome Dave!

I'll be checking out your telephone museum and teletype links.

I've still got a Model 14 that prints on 1/4" tape, a model 28 ASR, and models 32 and 33 KSRs here. Still use the 28 occaisionally on RTTY.

Hope the medical issue, whatever it is, doesn't slow you down too much. I'm 54, and I (voluntarily) retired last year, and am loving it. I spent the entire morning yesterday re-stringing* an old National drum dial on a homebrew radio I had bought at a hamfest a few weeks ago. Most of the time involved was removal and reinstallation of the dial in the radio. In my working days such a project would have had to wait on the shelf for "later."

*I went to the local hardware store at 7:00 AM when they opened looking for a suitable cord to use. They had a thick cotton twine that looked like it would do the trick (it did) and seeing that I didn't need much, the guy at the store gave (yes, gave) me enough to do the job at least twice, so so that I wouldn't have to buy a big 100 ft. roll. Yes, they know me and I'm a long-time customer there, but still...

73,
-Larry/NE1S

11129. 2-1/2M one-tube transceiver history

Yahoo group: antiquewirelessassociation (2010 — 2015)

From: ne1s@securespeed.us
Topic: 11129 Message: 11129

All,

I am working on an article for the AWA Journal whose subject will be a 1930s vintage 112 Mc/s transceiver design which uses a single type 76 triode as a superregenerative receiver for RX and as a grid-modulated oscillator (with carbon microphone into a suitable step-up xfmr) on TX. There were no additional tubes for modulation or audio amplification, and it was intended to be run from batteries. This circuit was published several times in the "Question Box" column of Radio and Television magazine, which was a Hugo Gernsback publication, but I am trying to find out where it was originally published, and by whom, or any other places the circuit may have appeared or was discussed.

Any fruitful leads would be gratefully appreciated and will get honorable mention in my article.

Thanks!

11130. How does the GPS get traffic reports?

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-05-16 19:41:09 UTC
From: oldradio@comcast.net
Topic: 11130 Message: 11130

FYI.....

Hi All,

How does the traffic report get to your car's navigation unit?

I purchase an Magellan GPS unit to replace a 5 year old GPS unit. The old unit cost $75 to update the maps, the new one is $150 with free updates (1st update pays for the unit) and the GPS also gives life time live Traffic updates.

In the last few days I see that no Traffic Reports were being received and a message said, to go the web site to find the reason. On the web site you click on the market of use and it listed a Radio Station that sends the Traffic Signal out. The Atlantic City Station is WFPG 96.9. I called the Chief Engineer Tom, W2DOX, and told him the problem. He walk into the Engineering Room and saw that the Traffic Encoder had a red light. A quick reset and the Traffic was back, he was surprised that the Traffic provider had not already call him, they monitor the system from a local RX. He thank me for the Heads UP.
The Magellan GPS unit has a FM broadcast receiver built in that scan for the station that TX the information. The Signal is* part* of the RDS (Radio Data System) which some stations send out the Song Tile, Artist and other information, this is then display on a screen of the home or car radio. Of course the Traffic Information is only decoded by the properly equip car navigation unit.

That also answers the question of why on the GPS unit says,-- "USE THE SUPPLIED DC POWER CORD and not another brands DC power cord", the FM Broadcast antenna is built into the DC power cord.

I thought that you might be interested on how the Traffic Report gets to the GPS.

Hi Larry, I believe Frank C. Jones may have been the originator and it appears in his 1936 -The Radio Handbook. Jones was a master of the 56 mc. and 112 mc. one and two tubeVHF xcvrs. The artiucle is on pages 215 & 216. I can Xerox it and send it to you. In the firstpart of the Ultra-High frequency telephony chapter he has quite a write-up about the transceiversfor that freq . range. A lot of these small xcvrs were used in the building of the Golden Gate bridgeand Jones was the builder and designer. I think!!! There are many small VHF xcvr circuits in thishandbook. Hi Charlie, and great to hear from you!

You're right, that's it! I just pulled the 1936 Jone's Radio Handbook
(Lindsay reprint) off my shelf and the circuit is right there on p.215.
That is a most helpful lead!

I wonder if it was first published in "Radio?." If so, I'd love to find a
copy of the original article.

No, I believe it's a LinkedIn "feature" - when you sign up they ask for your email account user name and password, and if you're foolish enough to provide it they send one of those emails to everyone in your address book.

05/25/2011
John Dilks, K2TQN, the QST Vintage Radio columnist, will be speaking at Ham-Com, the ARRL National Convention, in Plano, Texas.

John’s presentation is titled “Wireless North Pole, Don Mix 1923 Adventure” and he’ll be offering it Friday at 4PM in Fairview rooms 1 and 2, and Saturday at 8AM in Northbrook room 3

As John sets the scene for his presentation . . .

“Imagine for a minute you are a young 21 year old ham living in Connecticut with your parents. You have recently completed your schooling and are thinking about a career in radio. Self-taught, you are able to build or troubleshoot any radio circuit; you have honed your Morse skills and are one of the top radio operators around and well known by your peers. So what are you going to do? It is early winter 1923 and you receive an invitation from Hiram Percy Maxim to apply for the position of radio operator on an expedition to the North Pole.

“It sounds exciting doesn't it? The only hitch is, you will be leaving in the spring and the trip will last for a full year. You will be spending most of your time on an 88 foot schooner and anywhere you can walk from there. You will be a working crew member but your primary duty is being responsible for keeping contact with the outside world on a ham radio set.”

The story was taken from the daily journal written by Don Mix. The presentation includes original photography taken by Don Mix and Captain Donald MacMillan during the expedition.

Howdy Ron-

It's sad to see an old building demolished. I wonder what it was replaced by.. I guess the Hotel Charlotte fell into disrepair, was small, hard to convert to a new design, etc. so it came to the end of its serviceable lifespan.

Can't help but wonder what it was like when it first opened for business.

Could you make a youtube video featuring both the Dahlberg and the Tradio for us? Maybe show the chassis, how they work etc.? One of those sometime video projects... 8-D)

Thanks for the sharing!

Very impressive display.
I'm wondering if you have one of these?
I believe it to be a Deforest Type T. My father bought it new as he experimented with radio in it's early days. He was born in 1893 and so radio was very new when he was young. The tube is no longer functional as the filament is burned out but the label is very clear and the glass is intact. I believe this tube was sold specifically for experimenters. I have been unable to learn much about it though.

Subject: [AWA] Wall tube display case

I spent most of this afternoon dusting the tubes

in my wall mounted display case.

When you look at these photos understand that I removed

every piece, dusted the shelves and walls behind the

shelves, then cleaned each piece and returned it to

the shelf.

This display case is made out of 2x10s framed in the

stud wall. The size was dictated by the size of the

sheets of plate glass I had available. They came from

a giant 2 room size copy camera where I worked.

The operators were forever taping things to the outside

of the glass and then when they scraped the tape off

they'd scratch the glass. I'd get called to replace

the scratched glass and instead of tossing it in the

dumpster, I'd put it in my van...

I hope you enjoy the new photos, where the display

case is located makes it kinda hard to take good pictures.

Duane -

The deForest type T is a relatively scarce tube as far as tubular audions go. It was introduced in 1916 and it had a single filament. It can be easily identified as the letters DF is visible on the cylindrical plate. You have a nice item in your collection, along with the sentimental value. Most tubes then were marked for "experimental use only". 73 - Mike

I have posted the pictures to the photo section under "Deforest Audion Type T" folder. I am unable to view the exterior of the plate as it is covered by the label. I certainly do not intend to remove that! You can also see that there are some wisps of the covering of the lead wires remaining too. If anyone is interested I will send the HI RES pics of the tube in e-mail.

Larry -

Yes indeed, that is the shielded Fleming Valve that I mentioned. I am fortunate enough to have an excellent example in my collection. Thanks for the article on Fleming. Regards - Mike

Subject: [AWA] Three Element Fleming Valves

Hello Mike,

It is flattering indeed to receive a comment from a sagacious wireless aficionado such as yourself. Many thanks for raising the question of a three element Fleming valve.

Here:
http://books.google.com/books?id=VMcnAAAAYAAJ
<http://books.google.com/books?id=VMcnAAAAYAAJ&pg=PA298&lpg=PA298&dq=fleming+valve+%22external+grid%22&source=bl&ots=QfKBG594eV&sig=k5tEjydhDd057Bpe3J16LpelKF8&hl=en&ei=PRbtTfeYKuXX0QGavJGlAQ&sa=X&oi=book_result&ct=result&resnum=1&ved=0CBYQ6AEwAA#v=onepage&q=fleming%20valve%20%22external%20grid%22&f=false>
&pg=PA298&lpg=PA298&dq=fleming+valve+%22external+grid%22&source=bl&ots=QfKBG594eV&sig=k5tEjydhDd057Bpe3J16LpelKF8&hl=en&ei=PRbtTfeYKuXX0QGavJGlAQ&sa=X&oi=book_result&ct=result&resnum=1&ved=0CBYQ6AEwAA#v=onepage&q=fleming%20valve%20%22external%20grid%22&f=false

or

http://tinyurl.com/5r2r43a

is written in Radio broadcast, Volume 1 (1922)

"Fleming apparently made a quite thorough investigation of his valves, and it is worth while noting some of his remarks regarding their behavior. He had noticed that the current flowing across the

vacuous space in the valve was strongly affected by the action of either an electric or a magnetic field. The control of the electron stream by the magnetic field is the basis of the action of the "magnetron," a device developed in the General Electric Laboratory during the last year or two. The action of an electric field on the electron flow to the plate of course foreshadows the control of the plate current by an electric field applied either internally (the De Forest audion) or externally, as done in the Marconi audion, with external grid, a type of tube known to but few radio experimenters. It seems strange that Fleming did not at once jump to the idea of the audion, but the history of science is full of just such occurrences-a worker on the point of making an important discovery, yet missing it by the merest chance."

Apparently the above mentioned "Marconi audion" is not to be confused with the "Marconi VT Electron Relay" Manufactured by De Forest pictured near the bottom of this page:

You can't trust everything you see on the Web. The '"Marconi VT Electron Relay" Manufactured by De Forest' was a Moorhead product. See pp. 173-176 of Tyne's "Saga" or Bill Condon's "Moorhead and the Electron Relay" ("OTB," Vol. 29 No. 3 p. 12 and Vol. 29 No. 4 p. 14) or Condon's "Moorhead and His Tubes" ("Tube Collector," April 2003).

As Alan Douglas put it ("OTB," Vol. 33 No. 4 p. 19), "Moorhead, who actually made the tubes, would enter the employ of de Forest, working under the umbrella of his personal license to make and sell, the only rights de Forest had not sold to AT&T. Moorhead would sell all his tubes to Marconi, which would in turn sell all his tubes to de Forest's company, and to the public."

Mike,

From what I can see here http://w2dtc.com/2007-0625-n4fs-page.htm it would appear that you are fortunate indeed to possess many fine examples of the first electronic apparatus to grace the face of our planet.

Have you given any thought to what you might do with your legacy? Many of us are also facing that prospect. It seems that either the widow ends up auctions it on eBay, or the collector disposes it piecemeal to fund retirement.

Lud,

Many thanks for your comments and research.

I would expect Mr. John D. Jenkins is aware of the Moorhead connection with de Forest's early thermonic tube production, however I was unable to find mention of Moorhead on his web site (much of which currently seems to be Under Construction).

From the information available at this link http://www.mercurians.org/1998_Fall/misreading.htm it would appear that the Supreme Court case, referred to as Marconi Wireless Telegraph Corporation of America v. United States, 320 US 1 (1943), brought by the Marconi Wireless Telegraph Company of America, resulted in Marconi's basic patents being declared 'anticipated' and therefore invalid. Reportedly, this prompted a letter sent by Audion inventor Lee de Forest to the radio historian George Clark in July of 1943: "You will be tickled as I am ... to know that at long last, the U.S. Supreme Court has held the Fleming Valve Patent to be invalid." So it would seem that Marconi Corporation were hung by their own petard.

According to the information here http://www.bulbcollector.com/article021.htmlIn in 1905 Henry Wallace McCandless was approached by an associate of Lee DeForest who requested six duplications of the British Fleming Valve. From 1910 through 1915, McCandless produced all DeForest Audion vacuum tubes. 1915 - Audion production stops and DeForest was producing his own vacuum tubes. Was it subsequent to McCandless' ceasing production of de Forest Audions that Morehead Laboratories began?

Are you able to provide historical information on the relationship of McCandless to Morehead?

From the information contained in the 1919 issue of Electrical world, Volume 73, Part 2 pp1068: http://bit.ly/kYjnPQ

RADIO DETECTOR LICENSE AGREEMENT.☐Announcement was made at the De Forest Laboratories at High Bridge. New York City, recently, that as a result of a license agreement with the Morehead Laboratories at San Francisco, which are operating under the Fleming valve license issued by the Marconi company, the three-electrode vacuum-tube detector, otherwise known as the De Forest audion, which is used in radio apparatus for receiving,, is once again on the market for amateurs after court litigation covering a period of two years. Following the injunction proceedings brought both by the De Forest company and the Marconi company against each other,

the manufacture and sale of the audion was held up and the Marconi company was restrained because of conceded infringements on the three-electrode device.

It would appear that this announcement may have marked the beginning of Morehead's involvement with de Forest's Audion production.

With regard to de Forest's triode discovery, the information at this link
http://www.privateline.com/TelephoneHistory2/History2.html#anchor142878
provides a bit of opinion on the perspicacity de Forest's contribution to electronic art at the time:

Recalling those years in an important interview with the IEEE, Lloyd Espenschied recounts, "In May [1907], several of us had gone to a lecture that Lee De Forest had given on wireless at the Brooklyn Institute of Arts and Sciences. In this lecture, he passed around a queer little tube to all the audience. It was the first three-element tube to be shown in public, I found out afterwards. He passed this around and everybody looked at it and said, "So what!" Even De Forest said that he didn't know what it was all about. He looked on it as a detector. [an early device to pick up radio waves, ed.] Actually it was an evolution of the Fleming valve, but he would never give credit to anyone." Later in the interview, Espenschied gives an opinion of De Forest shared by many at the time, "No, he was no engineer. He was just a playboy all his life. He's just plain lucky that he stumbled into the three-element device. Just plain lucky. But that was handed to him for persevering; he kept at it, grabbing and grabbing at all the patent applications without knowing what he was doing."

So, like many early wireless 'inventors,' it was apparently perseverance and tenacity that brought de Forest success, rather than brilliant insight, deep perception, and prescience.

I've been sporadically working on a wireless timeline that certainly seems to bear this opinion out.

Subject: RE: [AWA] Three Element Fleming Valves

You can't trust everything you see on the Web. The '"Marconi VT Electron Relay" Manufactured by De Forest' was a Moorhead product. See pp. 173-176 of Tyne's "Saga" or Bill Condon's "Moorhead and the Electron Relay" ("OTB," Vol. 29 No. 3 p. 12 and Vol. 29 No. 4 p. 14) or Condon's "Moorhead and His Tubes" ("Tube Collector," April 2003).

As Alan Douglas put it ("OTB," Vol. 33 No. 4 p. 19), "Moorhead, who actually made the tubes, would enter the employ of de Forest, working under the umbrella of his personal license to make and sell, the only rights de Forest had not sold to AT&T. Moorhead would sell all his tubes to Marconi, which would in turn sell all his tubes to de Forest's company, and to the public."

I wasn't worrying about three-electrode Fleming valves. My sole concern was the manufacture of tubes branded "Marconi" by Moorhead Laboratories.

11175. RE: [AWA] Three Element Fleming Valves

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-06-08 04:04:12 UTC
From: Ludwell Sibley
Topic: 11151 Message: 11175

I'm not surprised at the claim that McCandless' company was called upon to make special items for Big Lee. Tyne's Special Pub (see below) reports that C. D. Babcock, De Forest assistant, obtained six Fleming replicas in late 1905.

The relationship between McCandless and De Forest is well documented in Tyne's book, pp. 110-111 and thereabouts, and in the TCA Special Pub "McCandless and the Audion." Tyne had access to both McCandless himself and his sales records.

De Forest apparently started making tubes upon the establishment of the High Bridge plant in 1915 or so.

Moorhead opened up the same year, although I've never seen any hint of a relationship between him and the East Coast firms (except as a target of infringement enforcement. Likewise with Cunningham and the other bootleggers. Moorhead's interaction with De Forest came later.

Gertrude Tyne had a quip regarding Big Lee, she and her husband having had De Forest over to dinner: "De Forest always invented looking over someone else's shoulder."

Lud

Subject: Re: [AWA] Three Element Fleming Valves

Lud,

Many thanks for your comments and research.

I would expect Mr. John D. Jenkins is aware of the Moorhead connection with de Forest's early thermonic tube production, however I was unable to find mention of Moorhead on his web site (much of which currently seems to be Under Construction).

From the information available at this link http://www.mercurians.org/1998_Fall/misreading.htm it would appear that the Supreme Court case, referred to as Marconi Wireless Telegraph Corporation of America v. United States, 320 US 1 (1943), brought by the Marconi Wireless Telegraph Company of America, resulted in

Marconi's basic patents being declared 'anticipated' and therefore invalid. Reportedly, this prompted a letter sent by Audion inventor Lee de Forest to the radio historian George Clark in July of 1943: "You will be tickled as I am ... to know that at long last, the U.S. Supreme Court has held the Fleming Valve Patent to be invalid." So it would seem that Marconi Corporation were hung by their own petard.

According to the information here
http://www.bulbcollector.com/article021.html
<http://www.bulbcollector.com/article021.html%20In> In in 1905 Henry Wallace
McCandless was approached by an associate of Lee DeForest who requested six duplications of the British Fleming Valve. From 1910 through 1915, McCandless produced all DeForest Audion vacuum tubes. 1915 - Audion production stops and DeForest was producing his own vacuum tubes. Was it subsequent to McCandless' ceasing production of de Forest Audions that Morehead Laboratories began?

Are you able to provide historical information on the relationship of McCandless to Morehead?

From the information contained in the 1919 issue of Electrical world, Volume 73, Part 2 pp1068: http://bit.ly/kYjnPQ

RADIO DETECTOR LICENSE AGREEMENT.-Announcement was made at the De Forest Laboratories at High Bridge. New York City, recently, that as a result of a license agreement with the Morehead Laboratories at San Francisco, which are operating under the Fleming valve license issued by the Marconi company, the three-electrode vacuum-tube detector, otherwise known as the De Forest audion, which is used in radio apparatus for receiving,, is once again on the market for amateurs after court litigation covering a period of two years. Following the injunction proceedings brought both by the De Forest company and the Marconi company against each other, the manufacture and sale of the audion was held up and the Marconi company was restrained because of conceded infringements on the three-electrode device.

It would appear that this announcement may have marked the beginning of Morehead's involvement with de Forest's Audion production.

With regard to de Forest's triode discovery, the information at this link
http://www.privateline.com/TelephoneHistory2/History2.html#anchor142878
provides a bit of opinion on the perspicacity de Forest's contribution to electronic art at the time:

Recalling those years in an important interview with the IEEE, Lloyd Espenschied recounts, "In May [1907], several of us had gone to a lecture that Lee De Forest had given on wireless at the Brooklyn Institute of Arts and Sciences. In this lecture, he passed around a queer little tube to all the audience. It was the

first three-element tube to be shown in public, I found out
afterwards. He passed this around and everybody looked at it and
said, "So what!" Even De Forest said that he didn't know what it
was all about. He looked on it as a detector. [an early device to
pick up radio waves, ed.] Actually it was an evolution of the
Fleming valve, but he would never give credit to anyone." Later in
the interview, Espenschied gives an opinion of De Forest shared by
many at the time, "No, he was no engineer. He was just a playboy
all his life. He's just plain lucky that he stumbled into the
three-element device. Just plain lucky. But that was handed to
him for persevering; he kept at it, grabbing and grabbing at all
the patent applications without knowing what he was doing."

So, like many early wireless 'inventors,' it was apparently
perseverance and tenacity that brought de Forest success, rather than
brilliant insight, deep perception, and prescience.

I've been sporadically working on a wireless timeline that certainly
seems to bear this opinion out.

I would like to inspect this console myself, but don't get to Massachusetts that often. The owner is moving in August and this has to go. The price is right.

Well it was sure interesting to look at what Alan Dougles sent you Ron. I just wonder if United Motors was a indepedent maker or the same United Motors was the old GM radio division? I also wonder too if the service company mentioned was a independent testing service setup for testing test equiipment or a group of test equipment makers to set standards for test equipment like the RMA for radios. Ron to let you know I was given a catalog which was put out by a company in the early 1970s which does have a Clough-Brengle ad in it. Dave N2TJQ

You can't trust everything you see on the Web. The '"Marconi VT Electron Relay" Manufactured by De Forest' was a Moorhead product. See pp. 173-176 of Tyne's "Saga" or Bill Condon's "Moorhead and the Electron Relay" ("OTB," Vol. 29 No. 3 p. 12 and Vol. 29 No. 4 p. 14) or Condon's "Moorhead and His Tubes" ("Tube Collector," April 2003).

As Alan Douglas put it ("OTB," Vol. 33 No. 4 p. 19), "Moorhead, who actually made the tubes, would enter the employ of de Forest, working under the umbrella of his personal license to make and sell, the only rights de Forest had not sold to AT&T. Moorhead would sell all his tubes to Marconi, which would in turn sell all his tubes to de Forest's company, and to the public."

i=book_result&ct=result&resnum=1&ved=0CBYQ6AEwAA#v=onepage&q=fleming%20valve
%20%22external%20grid%22&f=false

or

http://tinyurl.com/5r2r43a

is written in Radio broadcast, Volume 1 (1922)

"Fleming apparently made a quite thorough investigation of his
valves, and it is worth while noting some of his remarks regarding
their behavior. He had noticed that the current flowing across the
vacuous space in the valve was strongly affected by the action of
either an electric or a magnetic field. The control of the
electron stream by the magnetic field is the basis of the action
of the "magnetron," a device developed in the General Electric
Laboratory during the last year or two. The action of an electric
field on the electron flow to the plate of course foreshadows the
control of the plate current by an electric field applied either
internally (the De Forest audion) or externally, as done in the
Marconi audion, with external grid, a type of tube known to but
few radio experimenters. It seems strange that Fleming did not at
once jump to the idea of the audion, but the history of science is
full of just such occurrences-a worker on the point of making an
important discovery, yet missing it by the merest chance."

Apparently the above mentioned "Marconi audion" is not to be confused
with the "Marconi VT Electron Relay" Manufactured by De Forest
pictured near the bottom of this page:
http://www.sparkmuseum.com/MARCONI.HTM

Is this the shielded Fleming valve to which you referred:
http://www.marconicalling.co.uk/museum/html/objects/apparatus/objects-i=192.

Is it just me, or does anyone else think it a bit excessive to offer *four* food functions (counting the ladies' lunch), totaling $102 per person if you go to them all?

I do appreciate that the pizza evening will be free again this year!

Bill,

If you are “not a big fan of hotel banquet food” why bother posting what appeared to be a complaint about giving options to others who might want them? It cost you nothing to not participate.

Perhaps you don't attend much of the program at AWA, but I've presented an item at each of the last three conventions, and have also contributed papers to the two most recent AWA Reviews. If I ever make it to Charlotte I'll be happy to offer a topic.

How many of the responders here are planning to attend all four of the evening food functions at AWA?

I've found the banquet food at the RIT Inn quite variable - I had to send back a slice of "prime rib" at the banquet last year that was 90% fat and gristle. And I don't eat "fast food" instead; there are plenty of good restaurants not far from the RIT.

I respect your opinion wanting more programs in lieu of dinners but your original posting seemed like a complaint about too many dinners and you next posting said that you would eat elsewhere. It was only after that you mentioned a preference for programming. IMHO it would have sounded a bit better if you stated your programming preference in the first posting. I like programs and I like to eat too! One time I stated that since it is a conference I prefer to attend the programs rather than the flea market and I got hit plenty hard by the ones who prefer the flea market. Oh well, all is good. Have a good evening.

Thanks, Tom! Roy has emailed me off list to say that all the food functions are well subscribed, so evidently I'm in somewhat of a minority here. I expect to partake of one or two of the meals, just not all four.

Do you think we *shouldn't* discuss various aspects of the AWA
convention on the AWA email list? It's not as if the list has any
volume of traffic normally.

Bill

I have no problem with that, but once food was mentioned and the I like it or I don't like it, that's enough. If you like it, eat there, if not go elsewhere. It's that simple. I have had my say and I will not comment further about it.

From: roy_wildermuth
Topic: 11215 Message: 11215

Guys,
I thought this thread was worthy of a response. I hope that his might clarify our position.
First, The dinners are not mandatory. You don't have to go to them. And we actually are doing rather well with them for the second day of registration. If you do not pre-register, you will not be able to attend.
This year I wanted to do something special for our International Members. So I decided to have a dinner for them. Several of them have prepared additional small presentations just for the dinner in addition to the International presentation on Wednesday. Surprisingly, many of the domestic attendees have signed up as well. Here is the menu <http://awamuseum.org/?page_id=290> .
When I was in Charlotte this year, CC-AWA had a buffet on Thursday evening. I liked the idea. I wanted to provide an alternative to the expensive RIT Dinning room and the food in their coffee shop. Like CC-AWA, I wanted to provide a healthy, reasonably priced alternative. Here is the menu <http://awamuseum.org/?page_id=293> .
The Ladies Lunch is a tradition and is always well received and in 2010 was sold out. In 2009 I did not have it and received a written petition from many of the member's wives and significant others. That is one mistake I will not make again !
The Banquet always sells out.
Second,
Bill Burns is a highly respected, prolific contributor both to the AWA Convention and to this year's AWA Review. He is also appearing this year at the AWA Convention as part of Tom Pererra's Key and Telegraph Seminar. I am grateful for his fascinating presentations. He also appears on our YouTube site in this 2010 presentation from the Convention. See it here <http://youtu.be/o-7StfzIZy0> .
Bill is one of a group of fine historians and collectors who make The AWA Convention what it is.
And Finally,
I have 22 presentations scheduled not counting the Banquet presentation, Movie, Dinners, The Party, The Auction, The BookFair, the Special Events Station ,and The Flea Market, and Amateur License tests. I am not certain where I could put something else. But as unbelievable as it seems, we are still being contacted by some very good people who want to participate.
I will look forward to seeing you this year,
Roy WildermuthAWA 2011 Convention Chairman

11217. FW On Behalf of W1MGP - OFFERS TO AWA MEMBER

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-07-11 00:07:25 UTC
From: w1ujr@mac.com
Topic: 11217 Message: 11217

From: Samuel Beverage <smlbvrg@...>
Subject: OFFERS TO AWA MEMBER
Date: Wednesday, June 29, 2011, 7:03 PM

Dear OM; June 29, 2011

In the AWA Review Volume 23 I saw pictures and read about the restoration of some large Black Dial Zenith which reminded me that I have one of approx that era. It has been in unheated storage for quite a number of years and I would like to offer it to anyone who is willing to come and get it.

I will attach two pictures. I don't know the model no and I don't know it's condition but it appears to be all there

In addition I would ask whomever might be interested enough to come, that they also take a very large and heavy General Radio Variac, condition unknown. For whomever might take up on my offers I would also include a GE 20 AC Ammeter which is known to be in good condition.

I ask that all three items be taken.

Now the catch is that I am located on an Island in mid-Penobscot Bay, east of Rockland, ME. The ferry normally makes three round trips a day but to assure getting on and off a reservation is usually needed and one would have to get the first one leaving Rockland in the morning about 9:30 AM and if lucky leave on the middle one about 12:30. There is very little turn-around time between the middle one leaving Rockland about 2:15 PM and leaving here about 3:30 PM, so it would be important to get the first one from Rockland and have two chances to leave. I am 3 miles up island from the Ferry Terminal.

So if you know someone who might be interested I would appreciate it if you would send this offer in the right direction.

The cabinet is 42 inches high, so a Van or a SUV of that clearance would be needed.

I am offering these items Gratis but if anyone happens to have a manual, or at least a schematic, of a Drake R4B Receiver I need one.

73,

Samuel H. Beverage, W1MGP

I agree - it looks like a homebrew MOPA XTAL-controlled transmitter. I also noticed the ceramic coil socket for the output tank coil - looks like a National product, as I believe they had plug-in coils using that pin arrangement. I have no idea what that ancient tool hanging on the thing is. The taller tube isn't a 6DQ6, which is an octal sweep tube with a plate cap - it appears to be a nine-pin power tube, maybe a 6CL6, 12BY7, 5763, 6BQ5, or???

OK. I was assuming a nine-pin miniature, but a 6AQ5 would be a good 7-pin miniature RFPA in a low-power transmitter. It's the miniature equivalent of a 6V6.

To the Group--

We have to apologize for the lateness of our July
issue with the all-important convention registration card. At the last
moment we ran into an unexpected problem that required us, midstream,
to transfer the Journal to a different printer.

We
are back on track now, with an expected mailing date of July 25th.
Because of the lateness, we'll be using First Class mail rather than
Non Profit Class as we have been doing recently.

In the meantime, the registration card is available at the convention web site,
http://www.awaconference.com

You can register there on line.

We apologize for the inconvenience.

11232. need meter for Sencore "Mighty Mite II" tube tester

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-07-19 19:25:17 UTC
From: Jeff Miller
Topic: 11232 Message: 11232

I recently purchased a Sencore "Mighty Mite II" tube tester, and the meter has a problem. It's like there is some debris inside that came loose and is preventing the meter from deflecting more than a few mm. As such, I cannot calibrate it, or test any tubes. Would you know where I could get a new (used) meter?

The meter looks like it's sealed, so I have not tried to force it open.

Thanks,

Jeff

If you can find a way to open the meter, it isn't too difficult to use thin strips of adhesive tape to remove the debris. Cut strips with a safety razor, and carefully insert them between the escapement and magnet with stainless steel or other non-magnetic tweezers. Move the tape around, and replace it frequently to avoid re-depositing debris. Gently blow on the needle to test the meter, it's best to avoid touching the needle.

Many meters have been restored this way. It helps if you have good magnifier glasses.

How could debris get inside the meter?

Remove the meter from the tester and drive it with a known current source.

Check to be sure the needle is not out of the pivots!

Where would debris come from inside the meter? Is the paint flaking off the scale?

That's the only possible source of debris inside the meter.

If one looks at particles removed from meter movements, they are flakes, not globs. Metal plating, stamping residue, shavings from assembly fitting and manufacturing chard are all candidates. Peeling metal plating in some meters is an obvious source.

In the design of a meter, that the highest concentration of magnetic flux is designed to occur in the cavity in which the meter armature rotates. Any particles (even non-magnetic) that float around in the meter evenually wind up in that cavity. Over a period of time, tiny particles shake loose and end up jamming the movement, as they are typically suspended (stand vertically) between the walls of the cavity and the core of the meter movement. It doesn't take much to impede meter motion.

Of course with the magnetic field inside the meter, the slightest "leak" in the case will allow stray outside particles to enter, and as moths to wool, they find the magnet.

The first thing to check is that the meter movement is still in it's bearings. There is a high probability the unit has been dropped and the armature is out od the bearings.

I would support Bill's analysis. In my restoration work with WWII aircraft radios, I've run into all the above. Sometimes it's caused by well meaning folks who take the meters apart to "adjust" them, or whatever their motivation. On the other hand, I've found foreign materiel in cases where the three screws on the rear were sealed by paint. Who knows where it comes from...it just comes. :-)

The debris looks like dried wax. Small flakes of brown-orange color like you see in the old capacitors. Will investigate.

11245. Use AC Changeover Relay in KWS-1

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-07-23 22:08:40 UTC
From: roy_wildermuth
Topic: 11245 Message: 11245

My KWS-1 110V DC changeover relay bit the dust and I am thinking of using an AC DOW KEY relay which I have plenty of along with a another relay to take care of receiving muting.

I was planning on removing the diode that is inline to the relay supply wire in the Power Supply so that the KWS-1 would supply an AC voltage instead of DC.

Does anyone see any problem in doing this ? 110V Relays are hard to find and the Collins original is very very expensive. I do know about chatter but usually deal with that by putting a urge resistor accross the coil.

We use to use AC relays with no diodes in our homebrew mobile rigs years ago so when we would bring them inside to use or work on, the relay still worked either in DC or AC.

If it's an AC relay, shouldn't it have a "shading coil" on the pole peice to reduce/prevent chatter? Or does that only apply to larger relays?

An urge resistor? My XYL says I need one of them for when I encounter a
pretty girl...

Seriously though, I've had success running a Dow-Key that had a 110V AC
coil on about 80V DC. I did this because that particular dow key always
chattered, and running DC to it solved the problem.

11249. "Worlds Best QTH" in peril

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-07-24 16:12:10 UTC
From: Ed White
Topic: 11249 Message: 11249

Fellow Hams,

We are in danger of losing perhaps the world's best radio location QTH - old WOO Ocean Gate, NJ AT&T Long Lines transmitting site.

Just brief outline. The site is on the mouth of Toms River flowing into the Barnegat Bay, just below of town of Toms River. It is peninsula about 175 acres, surrounded by another about 200 acres of salty marshes. Channels supply salt water to flood the plain. Absolutely quiet, no man made noise. See the photos at http://www.teslaradio.org/site.htm

Two story building, like a fortress was housing 10 and 50 kW transmitters that fed some 45 Rhombics, 5 Discones, two wire LP on 100' towers, with 1 5/8 heliax. Building has about 2 acre fenced off area. Building and antenna fields were designated historical sites. There will be no residential or industrial developments there.

The site was leased to Tesla Radio Foundation and Museum by the township, for two years, and then extended for five years. More info about the project is at www.TeslaRadio.org<http://www.TeslaRadio.org> web site. We were trying to have the AT&T and Tesla Museum, Club house and competitive M/M station there. I was not able to devote planned time and resources to get the project off the ground due to family and business problems and commitments. There was some vandalism done to the site. Township is getting concerned that not much was done to preserve the site and is looking for more reassurances that project will be progressing.

What I have done so far, we have registered NFP Foundation 501 (c)3, have a bank account, PO Box 9, calls N2EE and NT1E. Now with my involvement with MountainView Resort and getting up in the age, I will not be able to devote as much time as I was hoping for (retiring there). We are trying to solicit more members and work with other Tesla groups, but more hands and heads are needed.

This is perhaps last call trying to save this magnificent and historical site and build world best radioclub station.

I can see some possibilities:
1. Expand the club with active members, solicit donations.
2. Group or club take over, perhaps Curacao style (shares).
3. Someone purchase the building and site.
4. ???

I am willing to help in any way I can, especially in the technical aspects, antenna and station design, logistics, etc. I have rigs and hardware to equip MM.

We also have nice, historical beach house around the corner from the site, which we would consider selling. Perfect place for contester to retire and dominate the bands.

If you are interested and can help, please come to our Tesla Radiofest BBQ this Saturday, July 23, at MountainView Resort in Glen Spey, NY www.MVmanor.com<http://www.MVmanor.com> and lets try to figure out how to save this Radio Jewell.

Be extremely cautious. Check out everything before donating your money to this project.

It is my understanding the local municipality owns this site, not Yuri.

While the site is nice, I believe it will take many hundreds-of-thousands of dollars to even partially restore the facilities. Overall, it is in deplorable condition. The building floods during extreme high tides and needs a new roof; and the antennas are old and have not been maintained. And it site is subject to NJ wetlands regulations and requirements and hefty fines for violations.

If you want to donate, fine, but please check it out first.

Me, too.

The only thing I've got that will receive down there is an RAK-6. I've tried unsuccessfully to hear SAQ, but all I was using for an antenna was my 160M dipole as a top-loaded vertical (both sides of the balanced feedline shorted together at the shack). I live in a quiet location for MF and HF, but on VLF there are a lot of power line harmonics and other obnoxious noises. Another problem is consistently getting my butt out of bed when SAQ is on the air.

Perhaps some day I'll try a better-suited antenna.

I set the RAK (which has a "logging" type scale and no frequency calibration) to 17.5KHz with an old audio frequency generator and frequency counter.

Speaking of spark, there is a spark transmitter story in the Jan. 1956 issue of Popular Electronics. It is a Carl and Jerry story of one of their adventures. I don't know if there are many that remember Carl and Jerry from Pop' Tronics' in the '50's and '60's but I eagerly awaited each issue in those days to see what electronics related adventure they would find themselves involved in. Some time ago I came across a web site that has many of the stories available for download and all the stories are available for sale in book form.http://www.copperwood.com/carlandjerry.htm
The story "Trapped in a Chimney" is one that is available to download in PDF form.
The site tells a lot about John Frye, the author of the stories, and there are some other links on the site as well.

In the July '63 episode, the guys are trapped in a buddy's overturned car.

They make a spark rig out of the coil + points ignition system, and a
linear "code wheel" by notching the dashboard (only partially padded
if at all, it was supposed to be a Corvette IIRC).

By chance, a wannabe ham recognized the TVI on his set and decoded their SOS.

I suppose it would've been a more authentic xmtr if they had rolled a
Model T....

Ron and crew,

Grimeton is not a spark or arc transmitter.

It is a CW transmitter. Its signal is generated by an HF alternator that is coupled to its antenna.

If I'm not mistaken a spark transmitter would only have a tone if it was a rotary spark gap with the tone determined by the number of contacts on the wheel and the speed of rotation. A fixed spark gap would sound like line noise since that is pretty much what it was.

Hi to the group.
I collect ARC and SPARK transmitter.
Yes spark only has a tone if it has a rotary gap same is true with ARC (But has a type of damping wheel).

true
I built a spark tx and made up a rotary gap but although it looks good
doesnt turn fast enough witht he number of contacts to make much
difference. I was looking for an 800 Cycle tone but it just raised it a
notch above power line noise
if you keyed it and turned off the motor you would notice a slight tone
change
the old ones used a large wheel with many gaps and turned it ??? 1800 Rpm
??

For anyone interested in hearing SAQ on 17.2 kHz (the next time they are on), you may want to try the WebSDR receiver operated by PA3WEG in Delft, Netherlands. The receiver is active right now at http://websdr.pa3weg.nl/ . Turn your sound up!

The timing is perfect! Here's a forwarded note from the folks at SAQ, in Grimeton, Sweden...

EXTRA

GRIMETON RADIO/SAQ TRANSMISSION

There will be a special transmission with the Alexanderson alternator on 17,2 kHz on Friday, August 5th , 2011 at 09:00 UTC .

Start up and tuning from about 08:30 UTC.

This time we do not require any QSL-reports and will not verify.

Regards.

SM6NM/Lars

Hi Jerry!

If you get to Asheville, visit "The Wedge" microbrewery. My best fiend
from high school is the master brewer there. Was there in April.

From: gcromer
Topic: 11290 Message: 11290

I know that a lot of you know Emory from attending the different radio shows, like Rochester and Charlotte. A quick note to let you know that Emory has entered a retirement home a couple of months ago. He had been having a good many health problems the past couple of years with his eyes, falling a couple of times to having a pace maker installed. I feel sure that Emory told the doctors how to do it also, for those of you that knew him, you know what I mean. Sue said that Emory's memory has been fading recently also. Emory was always so enjoyable to be around and he always had some stories to tell and information to give everyone. His home is filled with many great radios and it was always a privilege to be able to visit him and Sue and give a hand with some of the repairs.

If anyone would like to send him a card, the address is

Emory Deutsch

11293. HUGE RADIO/ELECTRONICS AUCTION

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-08-05 16:51:44 UTC
From: Al
Topic: 11293 Message: 11293

A Radio/Electronics Auction conducted by
The New Jersey Antique Radio Club and The Radio Technology Museum
Saturday, September 10th 2011
Mark your calendar!

At the InfoAge Science History Learning Center and Museum
2201 Marconi Road
Wall, New Jersey 07719
http://www.infoage.org/

☐ An all day sale of vintage radios, electronic test equipment, ham gear, audio equipment, marine radios, military electronics.
☐ Auction is indoors with ample seating.
☐ Noted radio auctioneer Richard Estes will be wielding the gavel.
☐ 1000's of vacuum tubes along with related parts & documentation. Tubes in box lots, groups or singles; many interesting types. Better tubes are pre-tested.
☐ Over 350 total lots, including many large box lots. There's something here for every radio collector.

Auction Begins at 10:00 AM Saturday - Viewing 8:00 to 10:00 Day of Sale

This is a sale of artifacts and donations excess to the centers needs. Proceeds to benefit InfoAge, The RadioTechnology Museum and The National Broadcasters Hall of Fame. Complete auction catalog will be available two weeks prior to sale. Terms are cash or good check, sorry, we cannot take credit cards. A 5% buyers premium will be charged

See the New Jersey Antriques Radio Club website for a printable flyer, latest information, and complete auction catalog. (Catalog should be available 15 August)
http://www.njarc.org/

Contact Ray Chase for specific auction information: raydio862@... or 908-757-9741

Hello Ron:
      Thank you for doing your transistor radios! I'm glad that besides myslef someone else has a decent sized collection of them! You have some very neat novelty ones I saw and liked. Some of the ones you have I have yet to get. Others you have I have also. My novelty transistors isn't quite as extensive as what you have but I have many in my collection of transistor radios I have collected. By the way is now 638 of them! That includes novelty,multiband portibles,and regular pocket ones dateing from 1956 through to this ceturay.

I do have certain ones that I want to get yet. One being a 1965 Mustang which Ford gave away as a gift when you bought a new Mustang! I had two 65 Mustang Convertibles (used) at one time years ago. The other being a ham like you Waco made a key style radio and I would love to get one of those to put right with my ham radios! I also am a history buff and I saw you had the statue if liberty one. That one I don't have but I have the other two Radio Shack novelty ones which they sold. The Liberty Bell and the three marching.revolutionary war millitaman.

One last thing my favorite novelty one that I have is a big gas pump one that stands almost two feet high. It is am fm. It has the big round glass light on its top and that can be turned on to light which alsolights up where the gallons and radio dial is also. Very neat radiowhen lit up and is playing. Hey don't stop collecting in this area too! There are many more novelty ones out there yet to get! Dave N2TJQ

11300. 1930 Philco model 112 question

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-08-09 20:32:21 UTC
From: oneradiodoc
Topic: 11300 Message: 11300

Hi Guys

Here's a question that has me a little puzzled. Been restoring radios for decades, but that doesn't mean confusion can't creep into the old grey cells once in a while.

I restored the main capacitor block in this radio with all new caps using metalized poly caps and two 2uf/450VDC electrolytics. On intial power up, there was a sizzling sound and the rectifier tube blew. Turned out the first 2uF/450VDC electrolytic cap blew and shorted, taking out the rectifier.

Question is: ... should these two filter caps be electrolytics or non-electrolytic capacitors? The reason I ask... is because on doing some research on 1930 power supplies, there was a reference to the filter caps being either type. Normally, we use electrolytics because they are cheaper in large uF sizes and consequently, smaller. What about 2uf... would a 2uF/600V metalized polyethylene be a better choice? I'm thinking it might be!

What do you guys think? What is the prevailing theory in this knowledgable group?

John

That happened to me once. Turned out I installed the electrolytic cap backwards. It pays to recheck every polarized component multiple times. Even then I sometimes end up installing it backwards.

Leonard

That will definitely do it.

But even when installed correctly, some of the modern electrolytics can't handle the high peak currents on the input side of a capacitor-input filter. I've had brand new electrolytics right off the shelf, installed correctly, heat up and spew their guts out the safety vent. Reforming before installation may or may not have helped, but I've never had a problem with them on the load side of the filter.

73,
-Larry/NE1S

> I restored the main capacitor block in this radio with all new caps using metalized poly caps and two 2uf/450VDC electrolytics. On intial power up, there was a sizzling sound and the rectifier tube blew. Turned out the first 2uF/450VDC electrolytic cap blew and shorted, taking out the rectifier.

Using a variac power supply with line voltage applied gradually while monitoring B+ can totally eliminate this startup problem. Alternately, using a series light bulb on the line may prevent the problem. The light bulb will light brightly with a short and limit current draw into the power transformer. I use both on initial startup. This is a great way to find shorted transformers, bad wiring or defective capacitors.

both types were used . RCA and Majestic both used 2 MFD oil paper paper capacitors as filter capacitors . the standard at that time was usually 2 to 4 mfd for 60 cycle sets and 10 for 25 cycle . the most likely possibility is that you had a defecrive 80 . I had one do that to me in a similar vintage crosley . turned it on and there was a bright flash from the rectifier tube . cannot prove it as the filament had ceased to exist , I expect the tube may have had a filament plate short . the majestic filters were 2 mfd 525 vdc paper capacitors . the 80 is a quick heating tube and the voltage could easilt reach 550 vdc before the rest of the tubes heat up enough to start taking current and pull the voltage bact to where it should be .

To: <greenkeys@...>
CC: Rene <rene@...>, nick.tusa@..., William
Bytheway <bythewayb@...>

GreenKeyers - - -

Through the gracious accomodation of Rene Steigler, K4EDX, owner of
WLO in Mobile AL, KLB north of Seattle, and KNN in Marina Del Rey,
California, and his tecnical staff in Mobile,

---> WLO RTTY News is now on the air!!<---

We will run callbands for the next day or so, and then put on news
traffic.

Frequency is 8473.000 KHz.

Power is 1000 watts. On-Air time is 24/7.

Signal reports are of great interest to us.

Those of you who can hear and/or copy WLO RTTY NEWS are urged to
listen to WLO at various times of the day and night, and send us an
e-mail noting your location (City and State) the time of day when
you hear us, and the signal strength.

Please bear in mind that this is a commercial class of transmission,
and the mark carrier frequency is lower than the space. This is
opposite of amateur RTTY transmission, so you will either have to
adjust your receiving apparatus to use reverse tones, or tune to the
UPPER sideband.

Please send your signalreports to us at :

WLONEWS@....

Speaking for myself, this is a dream that after perhaps 14 years is finally coming true.

I believe it to be a bit of history, because other than the WA9XHN/WC2XPF experimental RTTY transmissions between 1999 and 2001, to my knowledge there has NEVER been any RTTY News transmissions aimed at a general audience/listenership.

Because we are utilizing a maritime frequency, a portion of our transmission day will be using SITOR-B mode, which is the same as AMTOR-FEC.

A fellow in the marine electronics industry was quite pleased to hear of WLO RTTY NEWS and the inclusion of the SITOR-B mode, because all ships are required to have SITOR-B facilities aboard and are required to test them periodically.

He noted that the Coast Guard, who requires the tests, is often somewhat indifferent about assisting with SITOR-B tests, other than the NAVTEX transmissions, and that the presence of WLO RTTY NEWS will make his life easier.

He also stated that he was going to pass the word to all of his maritime customers that there is a new service available for their crews and/or passengers.

Who knows - this might turn out to be somewhat big.

Enjoy GreenKeyers - we're looking forward to your signal reports.

Thanks,

George - W7TTY- ITTY News - WLO NEWS Editor-In-Chief

Electrolytics are physically much smaller than full size capacitors, which is why they are popular. At 60 Hz, they both work identically.

Bill

(Hi Scott!)

Model 15? That's late-model stuff. I still have a (working) Model 14 that prints on 0.25" tape. It was the first piece of TTY gear I acquired, and when I hooked it up to the R390 tuned to the W1AW RTTY bulletin via a HAL ST-5 way back in the mid-1980s and it started printing intelligence, I was mesmerized by the magic.

(Have some newer stuff too - a Model 32, and a couple of 33s).

Hi Larry.

My first machine was a Teletype Model 26. I also had a Teletype FRXD3-EL non-typing "climbing monkey" reperforator. How I wish I still had both of those machines .

I donated them to the Science Museum of Long Island, and I was told the director later tossed 'em into a dumpster. That was partially my fault, as the ham radio room we had set up at the museum dissolved (the director didn't like it), and I should have retrieved my machines. But, I was in the process of dissolving the estate of my parents at the time, and it never happened.

I am always looking for an FRXD3-EL, but doubt I will ever find one again.

I love my Model 28, but it doesn't have the flavor of the ol' 26.

Hi Larry and All, Sure I remember the Model 14 TD which was part of the Model 19 set up. What an amazing machine that was, and yet for all it's complexity, it just keeps on running. The Model 28 is a whole 'nother ball game in terms of complexity. The HAL ST-5 and ST-6 ruled the airwaves. hi hi I still have my original HAL ST-6 from 1980 and a later acquired Model 15. What an exciting time that was as most of the guys were still doing machine RTTY rather than digital RTTY. I still love the smell and the nostalgic sound of the Teletype machine .

Alex, I have several Teletype books from the 70's and remember seeing the Model 26. I'm reaching deep into memory here, I believe the 26 also has the platten that moves past the type, it's tall and thin as well . I've never seen one in person though. I imagine it was as rugged as the 15.

Yes the Model 28's were fabulous. I used 28ASR's when I manned a radio room in the US Navy back in the early 1970's where there were hundreds of Teletype machines running. I used to be pretty good on the keyboard back then from typing messages 12 hours a day. The output of the typing was a paper tape that would be later run on the 28 Terminal Distributor I believe it was called. Once the message was typed, then we'd roll up the paper tape in a figure 8 on our fingers. Used to roll some pretty huge messages. What a great time to be in the radio room!!

How many of you remember or even seen a Weskit BN-1 novice tran/civer ?
Made in Kearney, Nebraska in 1956/57.
I came across one at an estate sale last month.
It was all messed up by someone trying to put a 6AK5 and 6CL6 in it.
I restored it to the original single 3A5, 1/2 crystal osc tran, 1/2 regen rec.
Some rich ham paid $396 for one on eBAY !!!!
I understand they are very rare.

Scott, thanks for your note.

The Model 26 had what resembled a children's typewriter type wheel. In operation, the letters would be selected by a hammer when the wheel came to a stop, and then the letter would retract back into the wheel, and it would rotate to the next selected character. The type wheel moved across the page on a track, if I recall correctly.

For its part, the FRXD3-EL non-typing reperf had a punching block perforator. As the 5/8-inch tape came out of the block the characters would be read by a series of feelers. The encoding would then be done by a series of cams, rather than with a rotary distributor, or TD. If the tape from the punching block stopped, the reader would pivot towards the output of the block, reading the holes in succession, until it reached the last set of punched holes, whereupon a microswitch would shut it off. The pivoting action lead to the "climbing monkey" moniker.

How I miss both of those machines. At least I have an old photo of my shack in those years and the machines can be seen in it.

11325. 1930 Philco model 112 filter caps

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-08-20 19:18:29 UTC
From: oneradiodoc
Topic: 11325 Message: 11325

Thanks to all who offered suggestions they are very appreciated.

From everything I have read, it looks like the originals were paper capacitors, as dry electrolytics were just being introduced about that time.

Our replacement primary electrolytic blew it guts, then shorted, taking out the rectifier. All the polarities were correct but thanks for offering that suggestion. To make sure I located the short before proceeding, I disconnected every lead off the power supply and checked them for possible shorts. The primary electrolytic was the only failure.

The power supply produces 390V DC at the first filter cap. We blew a 2uF/450V cap. The second replacement used two 4.7uF/450V electrolytics in series to yield us a higher voltage potential. Everything powered up properly when it was installed, and I continued along with more repairs. Later after rebuilding several Philco bathtub caps the second 2uf/450V electrolytic started to overheat so I doubled up there as well.

I like the suggestion of powering everything up on a Variac, its a sound suggestion, but I prefer to stress test these radios on the bench as they are eventually going to customers who wont be playing them all that often. I would prefer they fail on the bench than in someones home.

Again many thanks for all the suggestions the radio doc John

Topic: 11325 Message: 11326

John, rather than try and explain this myself, I think that if you'll read the part on caps, it shows what your problem is. The voltage needs to be 1.414 times the voltage when using a cap input filter. At 390 volts the DC rating should be around 550 volts rating on the input cap or it's going to run hot and go out again. I've had this to happen many years ago when I first started to build transmitters.

http://books.google.com/books?id=y0d9VA0lkogC&pg=PA556&dq=PIV+rating+for+input+capacitor+in+power+supplies.&hl=en&ei=hQxQTsiKEsfZgQfAwdGKBw&sa=X&oi=book_result&ct=result&resnum=1&ved=0CDkQ6AEwAA#v=onepage&q=PIV%20rating%20for%20input%20capacitor%20in%20power%20supplies.&f=false

I hope this helps, been there and done that.

Did you put a voltmeter across the suspect electrolytic to verify the positive lead of the voltmeter is on the positive side of the electrolytic? Usually in those power supplies, the positive lead of one electrolytic connects to the negative leads of two others.

If the selected voltage rating of the electrolytic is correct, then it should not get warm, even if the capacity value is too low. The only result would be less filtering than desired.

Thanks Gerald

Can't remember where I read it, but if I recall correctly we always used to install electrolytics rated at a minimum of 1.5 times the steady running DC voltage. Problem is we are somewhat limited to 450V caps these days, so running larger caps in series gets us a higher working voltage. The series 4.7uF/450V caps run Cold now. The 390VDC at this radios choke seems way too high to me. Maximum required DC is 255V at the 245 plates. The main power transformer has been replaced at some point in the past, likely in the late forties or early fifties, it has had a replacement Hammond transformer installed. I am assuming it was running for years with that transformer cooking along just fine. This radio has had tons of things wrong with it. You should have seen it when it came in for service. I would have deemed it a donor... but the owner had already heavily invested in a cabinet refinsihing job. I am basically rewiring the entire set with all new wire etc. and basically recapping all the bathtubs caps, and as we proceed we find more things to repair. I am now running the set on a Variac to set the voltage correctly at 180VDC on the plates of the 24A tubes and the sets plays not too badly, but we aren't finished yet. I suspect several of the voltage divider resistors are seriously out of spec. Time will tell. John

>
> John, rather than try and explain this myself, I think that if you'll read the part on caps, it shows what your problem is. The voltage needs to be 1.414 times the voltage when using a cap input filter. At 390 volts the DC rating should be around 550 volts rating on the input cap or it's going to run hot and go out again. I've had this to happen many years ago when I first started to build transmitters.

Thanks for the tips Aaron. This power supply isn't as complicated as some. The electrolytics are positive at the input and output of the first choke, with grounds in the normal positions. I have installed two 4.7uF/450V caps in series in both locations to handle the extra DC voltage potential of near 400V and they run Cold now and the radio is playing fairly reasonably. I think this 390VDC is too high at present because the 245's only require 255VDC on the plates. The power transformer is a replacement Hammond from decades back. I assume the radio was working for decades with this replacement transformer but you never know! I am running the set on a Variac to control 190V on the 24A plates. So far this radio has received... a new choke, had the power transformer wiring cleaned up, you should have seen how it came in!, a new output transformer on the speaker, a rewired interstage transformer feeding the 245's, all new chassis wiring, the originals were beyond brittle!, new caps throughout even in the bathtub blocks. and it looks like I will be replacing the speaker cone as well. Basically a new set! LOL. The set is playing but we aren't finished yet. thanks again... john

I install inrush current limiters in all my old electronics. They take the starting shock off the power transformer and reduce the voltage slightly so that it's more like the voltage the transformer was originally designed for. Also, when the replacement transformer plate voltage is too high I use a choke input filter.

Leonard

11331. AWA 2012 CONVENTION

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-08-21 18:54:30 UTC
From: Roy Wildermuth
Topic: 11322 Message: 11331

The 2012 AWA Convention will be held August 21 - 26 2012 at The RIT Inn.
The Theme will be Collins Radio.
Among other things, there will be a very important announcement concerning the 2012 Seller's Market. A announcement that I believe will fundamentaly change the way that The AWA has approached Flea Market management since 1961. This announcement will be made after the 2011 AWA Board meeting.

How many of you remember or even seen a Weskit BN-1 novice tran/civer ?
Made in Kearney, Nebraska in 1956/57. $20 40/80 meters
I came across one at an estate sale last month.
It was all messed up by someone trying to put a 6AK5 and 6CL6 in it.
I restored it to the original single 3A5 twin triode, 1/2 crystal osc tran, 1/2 regen rec.
Battery operated, 1.5 volt fil, 45 to 180 B+.
I understand they are very very rare.

Have there been any detailed post mortems of the event?

I saw Robert Lozier's report on the start of the convention, but nothing since. I did enjoy the photos of that facility in Japan!

Appreciate any reports on the convention.

Joe

Digikey has them, listed under Thermistors. They range from 1A to several amps and limit the starting current with a high (<100) ohms cold and decrease to a low resistance as they heat up. For smaller equipment that draws 1A or less, I use a 1A limiter. Even if the resistance doesn't decrease all the way because of insufficient load, it does keep old transformers from seeing the full modern line voltage. The only drawback is that they get quite hot and should be given plenty of space, but they save wear & tear on transformers and (in AC/DC sets) rectifies and filter caps. They list from a couple $ to several $ each. Incidently, I got the idea from Fred Ware, IIRC, when he was compliling a compendium on National Receivers.

AWA 2011

Summary: I hope to be back to this conference in 2012

Weather: Excellent for August

Forums & Lectures Extensive and informative
40 to 70 folks in attendance at each

Book Fair: Enough good stuff to leave anyone's pockets
severely depleted in short order without good discipline.

Auction: Large, about 550 lots Only a couple of dozen lots
to excite most folks. Prices: Low to astonishingly low for the
majority of lots (What I think was a very fine Marconi Magnetic
Detector is on its way to Austria at just $10,000 ☐ I'm thinking
They brought two and three times that much just a few years ago.)

Two small estates were part of the auction. It was kind of sad to see
good 30's consoles going for $5 to $25. I bought a circa 1925 ERLA
S-11 in pretty good shape for $5 (no correct tubes) and it included about half a dozen
Philco branded tubes circa 1931 and a pair of Zenith headphones for a tube Type TO.

Flea market: Small compared to the old days I counted 80 folks selling something on Thursday morning. Some had more than one space so there were probably a little more than 100 spaces. There were a couple of times when the old farts (like me) saw folks getting really excited by what was coming out of the back of a car or truck like in the old days.

The contest brought out some exceptional and unexpected items . Participation was good

The added meals worked well and the banquet had about 130 folks

I'll comment later on what changes I'd like to see .

Yours,
Robert

I think that Robert's analysis was pretty much on the mark. My thnaks to him for a good summary. His numbers were quite accurate.
However it would be difficult to quantfy the fellowship and closeness we all felt last week. By the end of 5 days I felt we were like those who shared something very special.

From: T David Zimmermann
Topic: 11347 Message: 11347

Greetings Fellow Radio Aficionados!

I recently acquired a 5-tube, 5-dial Browning-Drake TRF Receiver, model number unknown. The chassis and its components are in excellent condition. The reason I am writing is because I would like to find out more about the set. It came to me with only a hand drawn schematic with no voltages or tube numbers. It did come with several extra tubes, glass resistors and various other components, but I am not even sure which of these tubes are the correct ones. I am attaching one picture. I have more if needed. Can anyone help me identify this set?

Thanks!

PTL,
Dave Z (tdzim'n)

The reflector has heartlessly suppressed the picture (it does that).

However, the late Ken Owens wrote a substantial article on building a Browning-Drake ("OTB," Feb. 1999, p. 22). He points out that Douglas' "Radio Manufacturers of the 1920s" (Vol. 1, p. 96) reproduces the National promotion brochure on the Regenaformer in the set. Going a bit farther, Douglas cites several oldie magazine articles on the set, "QST," April 1925, among them.

There was some further chatter on building the set in the "OTB," Nov. 1999, p. 53.

If your "OTB" holdings go back to Dec. 1980 or you have the CD-ROM version, there was another article on building the set.

Dave,

Browning-Drake circuits are numerous indeed. They came as kits, homebrews & knock-offs. With transformer coupled audio & resistance coupled audio or just the rf/det. only. With engraved Bakelite panels & screen printed panels as well as a cabinet or not. Some would have a bias adjustment others would have ballast resistors for filament control. Some even included filament voltage meters. There is at least one AC version. There are variations in the tuning condensers, some are 180 deg, others are 270 deg, some will have a direct drive dial, others the variable drive logging dial or the "Velvet Vernier", still others illuminated.

ALL are recognizable as 'Regenaformer" radios by the unique detector tuning coil with the regeneration coil at a far end, even the knock-off coil is made that way. Note that on some coil labels of genuine models, this word "Regeanformer" is spelled incorrectly :)

As far as tubes, they can be: '99, 01a, 112, '71, in late versions with ux sockets type 30. There are models with a screen grid rf amp too, type 222. Generally, a set that uses a '99 will include a ballast cartridge or a fixed resistor in the filament circuit as well as a small neutralizing element.

I would suggest that you try the Antiques Radio Forum as one can post images with text, note that image posting is somewhat tricky if one uses on site storage. However, image width must be limited to 640 pixels to avoid tedious side scrolling.

Way back when the first thing I wanted to do after getting a new find back home was to fire her up....

My Browning-Drake 5R is one of the later versions with R-C coupling in the audio stages.... I was VERY impressed with how well this radio works and how good the audio quality is compared to the usual transformer coupling of the day...

I rank that set righ up there with the Grebe Synchrophase & Radiola 20 as being favorite sets to operate from the 1925/26 model year.

And yes, there is a ton of info available...

Robert

Clare has brought up the subject of attachments in our
YahooGroup email reflectors.
It's an easy change to allow attachments if the group
wants them.
In this day an time I would think that most people have
good enough anti-virus protection that it might not be
necessary, when I first set up the reflectors attached
viruses were very common so I set it to forbid attachments.

These reflectors are here for YOU, what do you think about
it, should I remove the non attachment rule?

Yes, lets allow attachments. I am very careful about opening attachments because of the virus threat. I use Hotmail and I am unaware of how to send photos on Hotmail except as attachments.

There's a recent option to allow attachments but automatically store them in a folder at Yahoo and provide a link in the email. Best of both worlds, I think.

Management -> Messages -> Posting and Archives (edit)

Attachments -> Store on site (exclude from emails)

In that case, I'm for sending them with the emails. Anyone reading in
Digest mode won't get them, though.

Even if attachments are allowed, they will not be included in the digest version, which I receive. Having them shifted to a file outside of the e-mail sounds like a good compromise.

11368. AWA Conference 2012....

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-08-29 00:58:19 UTC
From: Robert
Topic: 11368 Message: 11368

Folks,

For the AWA 2012 Conference I'd hope to see the following... Unfortunately I don't have concrete ideas on how to make them happen...

1. More 'Buzz' in the electronic media and elsewhere regarding the conference and at least some of it FAR IN ADVANCE of the event.

2. The flea market is too darn far away from the lecture rooms...
Bring it up closer to the food stand and have people park behind the flea market.. If that is not possible, how about having the flea market on the right side of the lot and parking on the left side parallel to the Thruway... Anything to counter the perception that the flea market is a step child of the event.... It is certainly important to me...

3. The AWA HD Video projector is fantastic BUT there needs to be a dedicated case for it that contains ALL the possible cables necessary to interface to Windows & Apple machines. (I had to loan a VGA cable for a few presentations.) I would also suggest that there be a USB connected wireless presenter and laser pointer with the projector.

4. In the pre 1912 forum, it would be nice to have a video camera hooked to the projector so the audience could see interesting details of the artifacts as they are being talked about.

5. On Friday (I think) the forum room had plenty of clean water glasses on the tables at the back of the room but NO WATER containers.

That's all I can think of at the moment.... I really do want this event to be even better for 2012...

All the best,
Robert Lozier

I was discussing this with Roy Wildermuth at the convention, and he told me he was hoping to start much earlier for 2012. And if you look at the 2012 convention website, he's on it already:

From: Robert
Topic: 11371 Message: 11371

Anyone have a tube carton for the Emerson Multivalve.

A friend in Europe would like to have a scan of the box.

I don't have one... But I have scanned a good number of boxes on my flat bed scanner... Just set for 300 dpi color... I have even scanned all sides and use Photoshop to do a full box layout.

If anyone can scan a box, I'll do the layout.

Thanks,
Robert

11372. Flea Market Importance Re: AWA Conference 2012....

From: radio1885
Topic: 11368 Message: 11372

I was a member when the flea market was a larger event than the conference. Three days of jumping between AWA events and the flea market was a fall meet hard to wait for.
My first contact with the AWA was through a ham. I was looking to replicate my 1960's novice station and he suggested I go to the AWA fall meet. Those days, there were no barriers or badges to the flea market and my first visit was an eye opener. I was enthralled by rows of parts, paper and radios in the flea market. I left as an AWA member.

I believe the flea market is the incubator for new members and there is a direct correlation between flea market health, conference attendance and membership numbers.
If you want a healthy flea market you have to open it to the public at a reasonable price - comparable with other antique and ham tailgate events.
The flea market as before is included for paid AWA conference attendees.

The flea market needs to be open to the public to attract more buyers and paying venders. Venders will come if there are enough buyers. More new public buyers bring possible new AWA members by association and exposure to the conference side. You want to fill the flea market with electronics enthusiasts of every facet. That is how the conference and membership will grow.

Bob,

I forget the nitty-gritty details, I'm too busy at the moment to look them up; I'm sure Roy will elaborate or correct us (and I hope he does!), but it's my understanding that the Conference flea market has effectively been open to the public for at least a few years now, which I agree is good policy.

Topic: 11368 Message: 11375

Looking to buy the VFO coupler that goes with the Millen 90711 VFO. It provides an isolated coupling between the vfo and tx. I've put a picture of one up on photobucket.com

http://s1140.photobucket.com/albums/n571/651daisy/?action=view¤t=VFOMatchingUnit.jpg

I bought a 90711 VFO to pair up with my 1935 Gross CP-100 transmitter. While the Millen is early 40's, his design and styling stayed in the 30's. Appreciate your help. Thanks. 73, Scott WA9WFA

11376. The Great Men and Woman of the AWA

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-09-11 21:15:41 UTC
From: Bruce W1UJR
Topic: 11376 Message: 11376

Popular management theory hold that one should not make a suggestion, unless they are personally prepared to implement it, but in this case I have neither the experience nor the skill to do so, but nevertheless allow me to make the suggestion.

I've been involved and member of AWA since the mid 1990s, and was fortunate to meet and be given a tour by Bruce Kelly himself. Most of us know Bruce or know about Bruce, but as I read my early copies of the AWA Review I come across author names that are clearly important, yet I know very little about. Reading the articles is immediately apparent that these folks had a most interesting past, yet I've struggled to find little about them. Names like Brelsford, Williams, Matlack (from whose namesake I have been presented with an award), Morris Moreau, Dowd, etc.

Does there now exist, other than in the brief bios in the Review, a collection of the founding lights and early forerunners of our fine organization? A sort of "Great Men and Women of the AWA"? I would find, as I would suspect others, such a tome great reading.

Consider this a modest suggestion or question. If I can be directly to such a publication, I would be most grateful.
If, on the other hand, one does not exist, does the general membership see value in such a book? Call it what you will, "The Early Days of the AWA", "Great Men and Women", the important thing is that some remembrance be there.

There is very little documentation of the early years of AWA besides the OTB and a few other publications.

Bruce Roloson made an appeal at the Conference for any member that has information, documentation, or pictures of early AWA activities to donate them or copies to the museum to add to the archives.

When I joined the active members at the museum were Chuck Brelsford, Art Kelley, Bruce Kelley, Bruce Elle, Mani Pires, Jack Wenrich, and several other locals. I knew Moreau, Dowd, Williams, and a few others only from their participation in the conferences. However all I have from them are vague memories.

The AWA maintains a YouTube channel, AWAMuseum.
 On it are a number of historical videos and slide presentations.
These were originally made by some of the "Pioneers" like Bruce
Kelly. In addition, we are endeavoring to post video from Conventions and The
AWA Spring Meet. Future plans call for interviewing AWA members in a
"Living History" program. We have actively solicited video and even
home movies from past AWA Events as well as any presentations not currently in
our Museum library. With the cost of video becoming so low, I hope that more
people will participate. If you have anything that yoiu think might be of interest let
either Mike Csontos or me know. We would be glad to put any film or pictures on DVD for no
cost just for the right to use them in our program.

11388. [AWA] Flea Market Importance Re: AWA Conference 2012....

Yahoo group: antiquewirelessassociation (2010 — 2015)

Larry

I am sorry to be so late in posting this. Family demands have put me behind.
I took over the AWA Convention in 2008. I was given a very free hand and was supported to the hilt by Then, relatively new, AWA Board of Directors.
At that time membership in the AWA was a requirement to attend the Convention. This had been the requirement since the early days of the Conference. A lot of this had to do with the fact that the AWA Could not handle the number of people that would have attended had they made it open. And there was the concern of Canandaigua and later Henrietta about parking. There was one memorable year (1997 I think) that the NYS police nearly closed the event down due to blocked fire lanes and parking on the NYS Thruway. The practice of making a Convention exclusive to an organization's membership is very common. Many do it. By the time I inherited it, numbers were way down. In 2009 we instituted open registration to the general public. In 2010 we opened the Flea Market on Saturday to the public for free. In 2011 we opened the Flea market to sales and purchases for free on Friday and Saturday. As the AWA no longer maintains security or gate control over the Flea Market, and rely upon an honor system for sellers. This worked out fine this year and allowed us to maintain comparatively low space costs. We also eliminated the tent due to the fact that the majority of the sellers preferred an open-air event. Plans for 2012 have not been released yet but past years changes will be retained. It has been my great wish to revitalize our sellers market in Rochester and I have spent many hours discussing possible remedies with members of my committee as well as other event organizers. I am always glad to accept suggestions and invite you to send them to awaconvention@....

11391. Clough-Brengle

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-09-21 23:19:06 UTC
From: John Ruccolo
Topic: 11386 Message: 11391

Hi Ron,

When did Clough-Brengle stop making equipment? Recently I bought a mint-condition 411 audio generator that is obviously too modern to be pre-war or early post-war. Looks like a smaller version of the famous HP-201 series. This is my first piece of C-B gear.

I figured I should ask THE man for Clough-Brengle.

Regards,

John

Roy,

Thanks for clearing this up. From comments I have seen here, some are still under the (mistaken) impression the flea market remains a members-only event.

73,

Subject: Type D Federal Ortho-sonic Radio receiver case

John,
I just rescued a wooden cabinet for a Type D Federal Ortho-sonic Radio receiver. It is without any internal components and is in fair condition. It also has a manual, in fair condition.

Do you know of anyone doing a restoration that this might be of some use to?

If so, I will sent it for just enough to cover the cost of shipping.

Thanks,
Wendell Reeve, K4MC

John,
Please pass it on, Id hate to see this end up in a landfill!

Wendell

I became intensely interested in the early nineties and quickly began traveling and attending every hamfest and antique radio meet I could possibly get to in the Eastern half of the US and soon discovered there was nothing quite like the AWA. I began attending the Annual AWA Conference in the mid-nineties when the flea market was so big you wanted to try to do a scan of the entire tailgate area after daybreak on Wednesday morning to try to be sure you weren't missing anything while longtime veterans were unpacking artifacts upon more rare artifacts but it was too overwhelming and impossible to keep up with it all. Tailgaters were even lined up in the travel lanes and overflow space in the grassy areas both behind the parking lot and along the Thruway were all full. My greatest purchases and the items I treasure most nearly all came from AWA veterans in the fleamarket because Bruce Kelly organized all those early pioneers and got them interested in saving and preserving many magnificent artifacts that might have otherwise been lost. My most fond memories are of getting to meet many veteran AWA members and nearly all the "heavy hitters" were in attendance in those days. There were so many seminars and programs going on constantly that you would try to take it all in up through the very last event on Sunday morning while regularly checking back in the fleamarket and with barely enough time for sleep you were completely exhausted by the time the meet was officially over. Even traveling home attempting to adjust back to your daily routine you would be recounting the marvel of the experience over those past four days and maybe while pondering over some of those rare finds you had packed in your car you would get excited all over again thinking about what next year might bring. A magnificent conference all around and an experience you don't soon forget.

I was a member when the flea market was a larger event than the conference. Three days of jumping between AWA events and the flea market was a fall meet hard to wait for.
My first contact with the AWA was through a ham. I was looking to replicate my 1960's novice station and he suggested I go to the AWA fall meet. Those days, there were no barriers or badges to the flea market and my first visit was an eye opener. I was enthralled by rows of parts, paper and radios in the flea market. I left as an AWA member.

I believe the flea market is the incubator for new members and there is a direct correlation between flea market health, conference attendance and membership numbers.
If you want a healthy flea market you have to open it to the public at a reasonable price - comparable with other antique and ham tailgate events.

The flea market as before is included for paid AWA conference attendees.

The flea market needs to be open to the public to attract more buyers and paying venders. Venders will come if there are enough buyers. More new public buyers bring possible new AWA members by association and exposure to the conference side. You want to fill the flea market with electronics enthusiasts of every facet. That is how the conference and membership will grow.

11403. RE: [AWA] Flea Market Importance Re: AWA Conference 2012....

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-10-01 14:21:21 UTC
From: Joseph W. Koester
Topic: 11368 Message: 11403

I too remember the flea markets that made the radio meets what they were. Despite the forums, lectures, banquets, and other sundry activities the flea market was the main reason I attended and I think that applied to the vast majority of the attendees. My first radio meet was at Elgin, IL in I think 1982 or 1983, and there I met some collectors that had been at it for a very long time, and yes the three dialers reigned supreme, though not for me! I heard of this wondrous place called Canandaigua (I couldn't spell it then) and it was the referred to as the one to attend. I think I attended Canandaigua the next year and joined the AWA – an organization I was in awe of.

The Elgin people were right, Canandaigua and the AWA were rightfully called the big one. I did the flea market and managed to get to a couple of indoor talks, saw the awesome contest, and attended the banquet, though I'm afraid Dave Frohman and I were under-dressed when we were seated at a table way up front below Marconi's Granddaughter! Mel Comer and Brue Kelly held court and I felt like I was in the presence of Gods. But the flea market is what brought me back and I seemed to grow each year, and soon Canandaigua overflowed the overflow area.

Rochester never had the charm and beauty of Canandaigua but it had the room for a couple of years and it began to overflow too, into the woods and along the Freeway, drawing the wrath of the New York State Police. Then the was the year the sales tax people appeared and of course no Mercury was allowed in Henrietta – whatever that meant, and I left my casks of mercury back home in Maryland!

But this was the greatest radio meet of all times and it was one I made every year. The forums and talks were second for me, but then that's me – I admit to being a flea market junkie. It was also an opportunity to reconnect with many friends that you only saw once a year, because everybody came to Rochester! And every year you made new friends.

I didn't limit myself to Rochester. I still attended Elgin every year or so, but after the move to Rochester the AWA meet came too close to Elgin, so I chose Rochester. I had started going to Charlotte too and it was a fine meet, growing every year. My local club – Mid-Atlantic Antique Radio Club (MAARC) – also started having a couple of big meets, in June and in October and they were also very well attended, but the AWA was the big one.

I moved to Texas in October 1995 and my trips to New York stopped, but suffering what I believed was radio withdrawal I made it to Elgin a couple of time with my new Texas buddies and still had a great time. After retiring to Tennessee in 1999 I was back a lot closer to my favorite haunts and MAARC's Radioactivity, Charlotte and Rochester were now within reach. Charlotte and MAARC were bigger and better than ever, and my first trip to Rochester in 2001 or 2002 was a shock. What happened??? It was a mere shadow of its former self! I couldn't believe it. The overflows were gone and the parking lot had huge holes in it. After two years I didn't go back until 2008 or 2009 and it was smaller still.

I still don't know what happened to the AWA meet. In recent years I have attended Michigan, Kutztown, Nashville, several Mid-South meets, and Charlotte and MAARC both of which have well attended meets. I know AWA is trying to get people back, and that region is still

radio rich, but the other meets seem much more attractive to me. I hope Rochester can regain its position. I heard someone say there was talk of returning to Canandaigua. That would be nice if it is true, and I would hope that the meet would return to what it once was the king of them all!

Hello everyone,

I am Dwight Steven-Boniecki, the author of "Live TV From the Moon". I wanted to thank all the members of the AWA for voting the book as the winner of the Taylor Award for the Preservation of TV History.

I can tell you that it was a labor of love which was a challenge and an absolute joy to write. Sadly, my main mentor throughout the project, Stan Lebar, passed away a mere six months prior to publication. I know from his family how wrapped he was that someone had finally taken the time to document his life's crowning achievement.

Indeed, I have just completed the manuscript for the follow-up which deals with Skylab, ASTP and Shuttle TV - and finally caps the story of TV camera development in manned spaceflight.

For those of you who have read the book, I certainly hope you enjoyed the read!

Many heartfelt thanks,

Dwight Steven-Boniecki

Glad to read you didn't have a castastrophy Ron. You must be living right... but it raises an interesting topic.
Recently, here in Ontario we have been reading more and more about homes catching fire and people loosing all their possessions. Just in the last year one home behind us was gutted, and last month another a block away. Personally, I think these homes are catching fire from poorly made substandard electronic devices like wall warts etc from foreign countries. A couple of years ago the fire departments were issuing xmas led lights only to have several homes catch fire. Are the folks at CSA and UL labs asleep at the switch or WHAT?

My mother's house burned as a result of a fault surge suppressor power strip. It caught the carpet on fire. Had this happened on a hardwood floor, I am sure the outcome would have been different. The trouble with most homes is the amount of flammable materials in them, even in the 21st century! Also if the home is 20 or more years old, the wooden studs light up real fast. I lost my mother to smoke inhaltion, so this is all too familiar to me.

Now to a more cheerful matter...
I am a néw member and am looking forward to building a 1929 style transmitter. I love vacuum tubes and building circuits using them.

I'm glad you caught it in time Ron! It's a good thing you had that fire extinguisher handy.

I guess they don't build stuff like they used to. Three or four years ago I was in the kitchen when I heard an odd sound coming from the living room. I walked in to find a fire fall of bright sparks emanating from the ceiling fan and landing on the carpet. The fan was not more than five years old. Many times I had left that fan running while I was outside working.

Best regards,
Paul N1BUG

I hope you enjoy the experience as much as I have Robert. I am just about to put the finishing touches on my first '29 transmitter - a TNT. It has been a nice change of pace from my other radio activities. I've had a lot of fun and learned plenty along the way too!

Best regards,
Paul N1BUG

That was close RON. We had that once with a rechargeable tooth brush. Glad you guys were home and the Wesley Chapel VFD came so quick. Smoke could have damaged a lot also. Good they got the big fan to get it out quick. Take care.

Hi Ron,

That sounds like unbelievable service, very unusual since these days, insurance companies will do almost anything to keep from paying a claim. Looks like they plan to take good care of you.

This brings up something that all of us with collections of anything should ask out insurers: "Is my collection fully covered against all perils?" Normally, homeowner's insurance will cover the house, normal furnishings some jewelry, etc against all perils listed on the policy. This normally includes fire, theft wind and rain driven events, etc. Virtually all policies exclude earthquake and flood damage unless a separate premium is paid. Most companies around the East have available earthquake coverage at a very reasonable price, or they did until last month. Flood insurance is another thing. It usually has to be purchased from a Government agency. The cost varies widely depending on where you live, ie: how much of a risk of flooding is there where you live.

There may be others, but I recently found a company in Frederick, MD that specializes in insurance for collections of all types, including, they tell me, radios. This is separate from a homeowner's policy and covers only the collection. I have no connection with this company but I plan to contact them shortly, since my ARRL insurance with MARSH recently expired and their policy for the estimated value of my collection is far cheaper than what ARRL is offering. They may not cover antenna systems. That is a question I need yo broach with them.

Since I am not in the advertising business for this company, please contact me OFF LIST if you care to have their information. I do not yet have a policy with them, but I plan to in the very near future.

73,

John, W4AWM

For which tubes? For most receiving and low-power transmitting tubes
the best resource is probably the RCA Electron Tube Handbook HB-3.

What kind of info do you need. There is a lot in the old ARRL handbooks.

There are some RCA tube manuals on line but I don't know where at the moment.

Now, there's a general question!

On the Web, the most famous sources are "Frank's Electron Tube Data Sheets" at www.frank.pocnet.net, or the Duncan Amps stuff at www.tdsl.duncanamps/rubesearch.php, or the N7JP data base at www.nj7p.org/Tube.php.

Antique Electronic Supply will happily sell you their reproduction of the RCA RC-30 manual which, however, covers only tubes sold by RCA.

If you want a REALLY complete HB-3 handbook, a compilation is available on-disc from www.valves.uk.com <http://www.valves.uk.com/> . This is the result of merging four or five versions / vintages of the HB-3. Again, only RCA-sold types. but it does get you data on the RCA 4000-series that's available nowhere else.

For receiving tubes sold by all US makers, the GE "Essential Characteristics" manual is Zone A. I think it's available in repro form.

If you want data on common tubes, or obscure tubes not handled by the above, the Tube Collectors Association offers its Data Cache DVD-ROM with every tube and solid-state device ever registered with the Electronic Industries Assn.: about 7000 tubes and CRTs, and 18,000 semiconductors, from 1933 to the end of registration about 1980. Roger White Electron Devices? No problem. Amalgamated Wireless Australasia? Yup. Chungwa Picture Tubes, Ltd.? Yessir. It also gets you data on a lot of the "Undocumented Aliens": tubes whose identifiers sound like American types (think 6CU7, 14K7) but that appear in no American tube manual.

And there are a zillion other sources.

A friend in England asked me about an article in the October issue,
which he has already and I don't. I checked with Marc Ellis today and
he said the overseas copies go first class while US copies go at a
non-profit rate and take longer. Should be here soon.

Since the US Post Office eliminated overseas surface mail a few years
ago, there's actually no postal alternative to first class for foreign
members, even for a non-profit's magazine.

If there were enough members in Europe, copies could be bulk-shipped to
a remailer there, but for a small number of copies this wouldn't be viable.

From: Marc Ellis
Topic: 11422 Message: 11435

To the group:

The October AWA Journal -- mailed to US addresses on October 20th by non-profit mail -- has been slower arriving than expected. I've just received my first news of a copy having arrived (in Wisconsin). But, for those who are awaiting information about the BK QSO party--following is the information just as printed in the October ham column.

Marc Ellis

HAM
COLUMN -- OCTOBER 11

Greetings to all!

. Things have been a bit rough here since the conference with computer failures and other minor problems. To catch up we are including the following listing of our four major events for 2012 as well as a reminder for this year's Bruce Kelly Memorial in December. If you need details on the contests, or log sheets, please go to the website where they will be posted about a month before each contest. If you cannot access the website, send me a note and I will copy them for you. Be sure to include your address in your letter!

At the Amateur Hour during the Conference it was suggested that we expand the BK to include 160 meters. That seems very logical as in the 1920s most of the hams used 160 and it is somewhat easier to generate RF at those frequencies. Thus we have followed this suggestion for 2012. So wind up the coils and pad out your condensers and we'll see you on 160 next year.

73, Tim

EVENT: 2011 AWA Bruce Kelley Memorial CW
QSO Party

DATES: Sat. Dec. 03 @ 2300 GMT to Sun. Dec.
04 @ 2300 GMT

and
Sat. Dec. 10 @ 2300 GMT to Sun. Dec. 11 @ 2300 GMT

Bands: 80 and 40 Meters

Special Conditions: Contest is for those who design and build low power self excited oscillators (no crystals!) from the 1920s. Design must predate 1929 and use early tubes. Construction to conform to design using the earliest parts available. Receivers: old is better, but not required. High scorers should send in full details on equipment design and station photos. Logs are due four weeks

after event.

Plaques to be awarded

EVENT:
2012 AWA Linc Cundall Memorial CW Contest

Dates:
Wed. Jan. 18 @ 2300 GMT to Thu. Jan.
19 @ 2300 GMT

and Sat. Jan. 21 @ 2300 GMT to Sun. Jan 22 @ 2300 GMT

Bands: 160, 80 and 40 Meters

Special Conditions: Contest designed to favor those using low power and equipment constructed before 1946 with straight keys.

But, all are welcome. High scorers should send in full details on equipment and station photos. Get that WW II surplus on the air!

Logs are due four weeks after contest. Plaques to be awarded

EVENT: 2012 AWA Amplitude Modulation QSO
Party

DATES: Sat. Feb. 18 @ 2300 GMT to Sun. Feb.
19 @ 2300 GMT

Bands:160, 80,
40 and 20 Meters

Special Conditions: AM is required. All ages of equipment and all power levels. Extra credit for working one or more Flagship Stations, typically W2AN (James Millen's personal xmtr.) and W1HRX (Millen's personal call). Logs due four weeks after event

EVENT: 2012 AWA John Rollins Memorial DX
Contest

DATES: Wed. Mar.7 @ 2300 GMT to Thu. Mar. 8
@ 2300 GMT

and
Sat. Mar. 10 @ 2300 GMT to Sun. Mar. 11 @ 2300 GMT

Bands: 40 and 20 Meters

Special Conditions: CW contest designed to favor those using equipment constructed before 1960 with straight keys. But, all are welcome. High scorers should send in full details on equipment and station photos. Logs are due four weeks after contest.

Plaques to be awarded.

EVENT: 2012 AWA Bruce Kelley Memorial CW
QSO Party

DATES: Sat. Dec. 01 @ 2300 GMT to Sun. Dec.
02 @ 2300 GMT

and
Sat. Dec. 08 @ 2300 GMT to Sun. Dec. 09 @ 2300 GMT

Bands: 160, 80 and 40 Meters

Special Conditions: Contest is for those who design and build low power self excited oscillators (no crystals!) from the 1920s. Design must predate 1929 and use early tubes. Construction to conform to design using the earliest parts available. Receivers: old is better, but not required. High scorers should send in full details on equipment design and station photos. Logs are due four weeks after event.

Plaques to be awarded.

EVENT: 2012 AWA Bruce Kelley Memorial CW
QSO Party

DATES: Sat. Dec. 01 @ 2300 GMT to Sun. Dec.
02 @ 2300 GMT

and
Sat. Dec. 08 @ 2300 GMT to Sun. Dec. 09 @ 2300 GMT

Bands: 160, 80 and 40 Meters

Special Conditions: Contest is for those who design and build low power self excited oscillators (no crystals!) from the 1920s. Design must predate 1929 and use early tubes. Duncan,

Thank you for posting this.

I had no idea that the new site was up or so extensive. Google searches still turn up the old site unless you work down to the seventh or eighth listing.

Someone had put a lot of work into the new site. It will take while to digest it.

It isn't clear who is responsible for the content but Roberts Communications's Heritage Marketing division is certainly capable pf producing a professional result.

From: whitebear1122@comcast.net
Topic: 11439 Message: 11450

Time to dust off your 1929 peanut whistle transmitter! Here is the announcement for the Bruce Kelly 1929 QSO Party. Marc Ellis will have these rules and a Microsoft WORD Log sheet put up on the AWA Website. There is one change in frequency this year, the recommended 40m operation is moving to 7110 Kcs to hopefully give us a clear space to operate in. 7040 is always jammed full of digital signals, rtty signals, cw nets, cw contests, high power cw. 73, Scott WA9WFA

The 2011 Bruce Kelley 1929 QSO Party

The Bruce Kelly 1929 QSO Party is a yearly AWA sponsored event where participants build their own transmitters using the designs, techniques, and tubes that were available in 1929 and earlier, and then put those classic transmitters on the air and try to contact as many other 1929 stations as possible. Since they use early designs, it is a cancatny of whooping, chirping, buzzing, clicking, drifting, swishing, swaying, worbling, and other interesting signals. This is what ham radio sounded like in 1929. The 1929 QSO Party was started and championed for many years by Bruce Kelly W2ICE, an AWA founder. Prior to Bruce's passing, he asked his close friend John Rollins W1FPZ to keep the 29 QSO Party going. John Rollins managed the QSO party for many years and renamed it the Bruce Kelly 1929 QSO Party in honor of Bruce. Several years back John Rollins asked me to manage the 29 QSO Party for him and Bruce. Bruce Kelly and John Rollins are now Silent Keys but I know both John and Bruce will be with us in spirit.

Dates and Times: First two weekends of December, Saturday Dec 3 through Sunday Dec 4, and Saturday Dec 10 through Sunday Dec 11. Starts at 2300Z (6:00 PM EST) Saturday night and finishes at 2300Z (6:00 PM EST) Sunday night, both weekends.

Objective: Contact as many 1929 stations as possible. Contact exchange consists of RST, Name, QTH (State such as ME or MN or NY), last two digits of the year of the transmitters design or publication (such as 29 or 27 or 23), type of transmitter (such as TNT or TGTP or MOPA or COLPITTS), and power input (such as 6W or 9W).

Rules: Transmitters must be 1929 or earlier types of self oscillators such as the Hartley, TNT , PP tuned grid tuned plate, MOPA, Colpitts, etc. No crystal oscillators. Tubes must have been available during or before 1929. Individual stations can be worked only once on 80 meters and once on 40 meters over the course of two weekends. If you are contacted by a modern station who is seeking information about the QSO Party, that contact may be counted. For those occasional modern contacts, use the word MOD for his transmitter. You can use any vintage or modern receiver that you wish.

Input Power: Transmitters are limited to a power INPUT of 10 watts or less. However, to help make East-West contacts, power may be increased to 20 watts INPUT between the hours of 0500Z (12 Midnight EST) and 1300Z (8 AM EST). Note this is INPUT power. Power input is calculated by multiplying PA plate voltage x total PA plate current. Example: my plate voltage is 300 volts dc, and my plate current is 30 ma, so my total input power is 300 x 0.030 = 9 watts input.

The 2011 Bruce Kelley 1929 QSO Party

The Bruce Kelly 1929 QSO Party is a yearly AWA sponsored event where participants build their own transmitters using the designs, techniques, and tubes that were available in 1929 and earlier, and then put those classic transmitters on the air and try to contact as many other 1929 stations as possible. Tubes must have been available during or before 1929. Individual stations can be worked only once on 80 meters and once on 40 meters over the course of two weekends. If you are contacted by a modern station who is seeking information about the QSO Party, that contact may be counted. For those occasional modern contacts, use the word MOD for his transmitter. You can use any vintage or modern receiver that you wish.

Input Power: Transmitters are limited to a power INPUT of 10 watts or less. However, to help make East-West contacts, power may be increased to 20 watts INPUT between the hours of 0500Z (12 Midnight EST) and 1300Z (8 AM EST). Note this is INPUT power. Power input is calculated by multiplying PA plate voltage x total PA plate current. Example: my plate voltage is 300 volts dc, and my plate current is 30 ma, so my total input power is 300 x 0.030 = 9 watts input.

Frequencies: NOTE THE NEW 40M FREQUENCY. The QSO Party operates in both the 80 meter and 40 meter cw bands. The QSO Party typically operates between 3550 to 3580 Kcs and 7105 to 7115 Kcs, plus or minus depending on QRM. Note that the 40 meter frequency has moved up into the old Novice band to avoid the digital modes, contesters, cw nets, and high power cw.

Logs: Either electronically email your 1929 log to Scott at wa9wfa@... or mail via post office to: Scott Freeberg WA9WFA, 327 Wildwood Avenue, Saint Paul, MN 55110. Logs must be in the 1929 QSO Party log format otherwise it will be difficult to score you. An official 1929 log sheet will be available for download from the AWA website. Please do not email logs to any other email address except the one above. Last year some people emailed logs to my work account, to my family email account, to a secondary BA list account, besides my wa9wfa email.

Scoring: Scoring is simple. Add up the number of 1929 QSO's on 40 meters and 80 meters. Example: if you make 15 QSO's on 80 meters, and 10 QSO's on 40 meters, your final score

is 25. All submitted logs will be scored and the results published in the AWA Journal. Please submit logs by January 15, 2012.

Good luck to all participants and please send me a photo of your 1929 station. Thanks. 73, Scott WA9WFA

Marc can probably supply exact numbers, but a 3 ounce Journal would be
84 cents first class and about half that at the non-profit rate, so
that's about $1.60 saved per member per year. The new Museum website
says we have 2100 members, so the total saved would be about $3300 per year.

I don't see what the big deal is whether the Journal is early or late. It is the same content and usually not time sensitive. I read it when it gets here. Most publications we get never come at a consistant time. I suppose it does give people something else to bitch about. I thought this was a radio forum about radios.

Last week the Perham collection of History San Jose added a 1906 Poulsen wire recorder to its collection. This complements the two very small Poulsen/Elwell arc transmitters and the 30 kw one in the collection.

I am aware of an early Poulsen disc recorder. Are there any others?

Hi Will,

I have a Poulsen Wire recorder. I'm guessing it is from the 1920's. It winds the wire like a fishing reel, really cool gearing to watch work. Has a single tube and transformer and has a mechanical reversing mechanism to reverse the direction of the wire. Has a mahogany base and a raised platform for the wire reels and heads to mount, all metal is turned and of high quality workmanship. A beauty to look at. I saw one like it sell on ebay about 10 years ago. Went for a bunch of Pesos.

http://www.pavekmuseum.org/poulsen.html

Mine resembles the one in the link above but is different. Don't have any photos right now, it is in my storage.

There is a picture of the one in the AWA Museum at:

http://www.antiquewireless.org/museum/tour12.htm
(http://www.antiquewireless.org/museum/tour12.htm)

There are two others (different models) in storage somewhere. We also
have some documentation from one used by an attorney in Washington in the
1930's who thought it was a great improvement over the Edison cylinder dictation
machines and was very disappointed that the development wasn't continued
when the original patents ran out.

Thanks Mike,

I'll have to check it next time I'm there. I'll also have to dig out mine and take some photos. I don't have the wooden box for mine, but the base looks very similar, as I remember it. Mine did have a box, but I didn't get it with the machine, which was a good fleamarket find back in the 1970's.

Maybe I should bring it to the AWA meet this year (2012)? I think Lauren has one, as I remember him telling me once.

The wire on it has never been listened to. I always wondered who might be on it? This would be a good project for some technical crew. Maybe the History Detectives show would be interested?

There are two ways to view a publication. If it's a static deal, or in Fossil Mode, then it can drift in at leisure. If it's dynamic, with time-value news, announcements of upcoming events, want ads, etc., then added delay in the distribution sucks the life out of it. Your Results May Vary.

Incidentally, boasting about how much money was saved by using the Low Rent mail rate is unwise. Since the AWA bylaws specify that election materials must be mailed at least 30 days before the vote count, it was necessary to do that special cover-your-butt proxy mailing, thus wiping out the saving.

Is this a radio forum about radios? Well, here's how the originator put it, a few lines down the screen: "Questions or comments on any subject relating to radio history, radio collecting, buying and selling of radios or radio parts, radio collector clubs and radio collector events are welcome." It seems to me that discussion of the operation of "our" museo-association is fully appropriate.

11476. Additional Linc Cundall 40 mtr Frequencies?

Yahoo group: antiquewirelessassociation (2010 — 2015)

From: Niel - W0VLZ
Topic: 11476 Message: 11476

Is there any thought being given to adding additional 40 mtr frequencies for the the AWA Linc Cundall CW Contest coming up in January?

In the past the LC 40 mtr suggested frequencies have been 7030-7050KHz. In recent years 7040-7050 has been overrun with RTTY and digital stations, really limiting its usefulness during the contest. Rather that squeeze most of the 40 mtr LC contacts into 7030-7040 why not add in 7105 - 7115? Those that can't move off of 7040-7050 can stay and do battle with the RTTYers and others with VFOs or a larger crystal selection can have another option.

From: Al
Topic: 11478 Message: 11478

Folks,

I think we've all seen the picture here: http://users.erols.com/oldradio/eha1.htm

In fact there is a similar audion control box in the AWA Museum.

The coils in the tall boxes and the variable caps in the square boxes strike me a lab stuff from Columbia U. I'll wager that the setup in Armstrong's attic and the radio demonstrated to Sarnoff in early 1914 didn't look like this.

Does anyone have any alternate info on this subject?

I volunteer at The Radio Technology Museum which is at the Marconi Belmar, NJ site where the 1914 demo took place. We need to start preparing for a 100th anniversary bash.

See: http://www.rtm.ar88.net/

Any help appreciated,

Al

Hi Guys,

I recently built a replica of a 1929 TNT transmitter from the November 1929 Issue of QST, to participate in the next Bruce Kelly 1929 QSO party. It uses a type 45 tube and puts out about 3 watts. I looked at the output on a spectrum analyzer and the signal has no spurs and all harmonics are at least 50 dB below the fundamental (80 meters). I asked several close friends around the State to listen and critique the signal. They all reported chirp, but no clicks, with a T-9 tone. I have made about 20 contacts with the rig and the reports have been consistant with "some chirp". Of course the chirp is worse on a windy day, but no one has complained, and many guys said the signal was "unique. I monitor the signal with a frequency counter and another receiver, and have had 45 minute QSOs with no apparent frequency drift. To be honest, I do not think I have ever had so much fun with Ham Radio. I can imagine myself in the early days of radio, when no one had commercial gear, and all the signals probably had some chirp.

I planned to build a display for the rig at our local Ham Swap in February, to show folks what equipment was like in the early days of radio. I also wanted to collect a few QSL cards to display with the rig, to prove it actually works. Thus, I have been on the air with the rig most evenings.

Yesterday I received a notice from an "Official Observer" that my signal has "Frequency Instability", 'Chirps", 'Key Clicks", and "Distorted Audio", and stated that "Your rig is not in compliance with FCC mandates". He listed 47 CFR 97 101, 103, and 113 as his reference. I researched those paragraphs in the regulations. They mostly say we cannot use profanity, transmitt music, deliberatly interfer with others,accept compensation, etc. There is one general statement about using good operating practices. I Emailed the gentleman requesting more specifics, and that he tell me just how I am violating the law. He has not responded.

My question is this. Do you guys think that I am truly in violation of FCC rules? I have always tried hard to follow the rules and do not consider myself a "hardened criminal". I certainly do not want to get in trouble with the Friendly Communications Commission, but am having trouble understanding who I may be harming here. Am I having too much fun? Should I just chuck the rig and go back to a Ricebox? Maybe a better regulated power supply would help.

Would appreciate your input. My skin is pretty thick so if you think I am wrong, please tell me . Am reluctant to put the rig back on the air at this time.

Dave,

Good point, and it's one I've been concerned with since building a Hartley transmitter fifteen years ago. 97.307(d) discusses spurious emissions, but generally exempts transmitters constructed prior to 1977. This means constructed -- not designed before 1977. The fact is that many of these simple transmitters produce ample amounts of harmonics, and are considered spurious.

As long as: (1) the harmonic content remains reasonably low; (2) chirp is well contained to the operating frequency; and (3) key clicks are minimized, then I see no issues. Key clicks are easily solved by using any one of several methods developed over the past 50+ years.

The OO is not used to hearing these types of transmissions, except perhaps from Cuba -- but even the Cuban stations seem to have acquired more modern equipment in the last decade!

As a preemptive measure, it may be possible to direct the question to Laura Smith at the FCC, stating that the antique transmitter will comply with current rules, but may in fact have artifacts present in designs from 80 years ago. Assuming her response is positive, I would use that as an advisory opinion if the issue re-surfaces in the future.

Dave,

I don't see any problem with what you are doing. Period. In fact, I think it is fantastic!

I also think that the Official Observer (OO) should, at the very minimum, respond to your request for clarification. This is the reasonable thing to do.

If your signal has a reasonable chirp, meaning that you're only sliding tens or perhaps as much as 100 Hz (that's a whopping chirp!), then you probably wouldn't be interfering with anything/much at all and there isn't a basis for the OO's assertions.

However, if the chirp is several hundred Hz, then the problem may be worse than you realize as your signal would very rapidly pass through the narrow passband of most CW filters and probably go unnoticed until you turned the CW receive filters off.

All that said, I think this is much ado about nothing. I salute your endeavors and thoroughness. Nothing like the smell of solder in the morning!

Dave,

I'm an OO, and I think the guy is a stick in the mud.

If I had a dialog with someone using an old or replica transmitter, the conversation would have changed tone and I would have dropped things once I knew they were running old equipment.

Best of Luck!

Dave,

Before your post I had never considered the potential illegality of the signals put out by vintage rigs. It seems to me that this would arise from the violation of two code sections.

47 CFR 97.101(a) requires good engineering practice.

47 CFR 97.307(a), (b), (c), (d) all speak to keeping bandwidth to the minimum required for the emission type, and to reducing harmonics and spurs to levels below certain limits.

You said your transmitter has no spurs or harmonics less than -50 dBc, so that's not your problem. Which leaves clicks and chirp, which would increase the bandwidth of your CW signal beyond what can currently be achieved by good engineering practice.

Which brings me to: Keep in mind that Official Observer is a volunteer position in the ARRL field organization. Its intent is to be helpful, giving advice, and a heads-up, to hams with problem signals. OOs or the ARRL have no enforcement capacity. Nor would they, to my knowledge, report a problem to the FCC.

If you want to pursue this, I would suggest not contacting the FCC. They might well produce an opinion adverse to the on-air operation of vintage transmitters, which would ruin everything. Instead I would contact ARRL and ask them what their position is on the operation of these old rigs. Based on what you said, it seems that you encountered an over-zealous OO.

Vintage Rigs:

I wouldn't open a can of worms by contacting Smith at the FCC. Most of them have no practical radio knowledge. It might start something bad for us out of their ignorance.

I think Dave took the proper response. I doubt if the OO has anything. (personal opinion) I remember others talking about OO notices after earlier contests. Most people ignore them as the contest is short and then it's quiet.

You may or may not be in violation of the letter of the law (regarding technical specifications of signal quality, which may be referenced elsewhere - as they say up here in Maine, hard tellin' not knowin'). But you certainly are not in violation of the spirit of it, IMHO.

> I certainly do not want to get in
> trouble with the Friendly Communications Commission, but am having trouble

If it feels good, it must be wrong ;-) Seriously, some people (and I imagine this O.O.) take themselves way too seriously. I am not offering advice, but if it were me I'd lay off for a while or operate the rig on a different band until the situation cools down a bit. Some of these O.O.'s have no clue about out aspect of the hobby; they hear a signal like that and they think our riceboxes are broken ;-) If they understood what we were doing, they'd probably be less critical.

> Should I just chuck the rig and go back to a Ricebox?

I wouldn't, myself. If all I did was operate a ricebox I would have become bored with amateur radio a long time ago, and would be inactive.

> Maybe a better
> regulated power supply would help.

Perhaps. Or don't load it as heavily. It is not unusual to have low plate efficiency - as low as 30% is not uncommon. You'll still be heard almost as well, and the signal will be more stable.

Hi Gang

Thank you for the advice and comments. I really appreciate your thoughts.

I am still considering how best to proceed. I am sure the OO thinks he is just "doing his job" and advising me of a problem with the rig, and while I do not believe my 3 watts were bothering anyone, I respect his dedication. As I stated, I am a "law and order" type guy and have no wish to violate any rules and regulations, nor do I have the money to pay any FCC fines if the situation was to go that far. I also have no wish to" open a can of worms", or ask any questions for which we cannot stand the answer. I do not want to give up the TNT either, but am not sure it is possible to completely eliminate the chirp from this type of transmitter.

I have acquired about a dozen QSL cards for the display, so I think I will switch rigs for a short while. I have a homebrew 6AG7 oscillator transmitter from a 1950's QST and a Paraset replica, neither of which have seen much use lately (and neither of which chirp). I will use one of those while I rebuild the power supply for the TNT, and try some different values for the Grid Leak resistor. Probably a good time to finish winding the 40 meter coils as well. I recently acquired a NOS type 10 tube, so maybe I will modify the rig to use it. The increased power from the type 10 will allow me to reduce the coupling and maybe the reduced loading will improve the signal. So many interesting things to try!

Probably the best solution would be to build a MOPA type circuit and let the oscillator run, keying just the PA. I have talked to a few guys doing that and their signals sound very good. Guess it is time to see what circuits are available. At any rate, I will have something vintage on the air for the BK QSO party in December.

Sorry about the rambling reply. I am told that us old geezers tend to do that. Thanks again for your thoughts and please look for me on the air (80 meter CW mostly). After all, I think that is what it is all about. Keep the filiments glowing!

I planned to build a display for the rig at our local Ham Swap in February, to show folks what equipment was like in the early days of radio. I also wanted to collect a few QSL cards to display with the rig, to prove it actually works. Thus, I have been on the air with the rig most evenings.

Yesterday I received a notice from an "Official Observer" that my signal has "Frequency Instability", 'Chirps", 'Key Clicks", and "Distorted Audio", and stated that "Your rig is not in compliance with FCC mandates". He listed 47 CFR 97 101, 103, and 113 as his reference. I researched those paragraphs in the regulations. They mostly say we cannot use profanity, transmitt music, deliberatly interfer with others,accept compensation, etc. There is one general statement about using good operating practices. I Emailed the gentleman requesting more specifics, and that he tell me just how I am violating the law. He has not responded.

My question is this. Do you guys think that I am truly in violation of FCC rules? I have always tried hard to follow the rules and do not consider myself a "hardened criminal". I certainly do not want to get in trouble with the Friendly Communications Commission, but am having trouble understanding who I may be harming here. Am I having too much fun? Should I just chuck the rig and go back to a Ricebox? Maybe a better regulated power supply would help.

Would appreciate your input. My skin is pretty thick so if you think I am wrong, please tell me . Am reluctant to put the rig back on the air at this time.

73, Dave

Hi Col. Dave!!
Just to let you know I received one of those cards when I was in the AWA QSO Party! I sent him a reply and told him if he listened up and down frequency, he would hear a lot of chirpers, whistlers, whizzers and weepers. I told him it was the AWA annual event that has been going on for years. Old time 1929 type radios. I asked him if he was aware of this when he issued me a card. He never wrote back. He-He!
Have a great Air Force Day! "Keep 'em Flyin"

Subject: Re: [AWA] Would appreciate some advice

  Hi Gang

Thank you for the advice and comments. I really appreciate your thoughts.

I am still considering how best to proceed. I am sure the OO thinks he is just "doing his job" and advising me of a problem with the rig, and while I do not believe my 3 watts were bothering anyone, I respect his dedication. As I stated, I am a "law and order" type guy and have no wish to violate any rules and regulations, nor do I have the money to pay any FCC fines if the situation was to go that far. I also have no wish to" open a can of worms", or ask any questions for which we cannot stand the answer. I do not want to give up the TNT either, but am not sure it is possible to completely eliminate the chirp from this type of transmitter.

I have acquired about a dozen QSL cards for the display, so I think I will switch rigs for a short while. I have a homebrew 6AG7 oscillator transmitter from a 1950's QST and a Paraset replica, neither of which have seen much use lately (and neither of which chirp). I will use one of those while I rebuild the power supply for the TNT, and try some different values for the Grid Leak resistor. Probably a good time to finish winding the 40 meter coils as well. I recently acquired a NOS type 10 tube, so maybe I will modify the rig to use it. The increased power from the type 10 will allow me to reduce the coupling and maybe the reduced loading will improve the signal. So many interesting things to try!

Probably the best solution would be to build a MOPA type circuit and let the oscillator run, keying just the PA. I have talked to a few guys doing that and their signals sound very good. Guess it is time to see what circuits are available. At any rate, I will have something vintage on the air for the BK QSO party in December.

Sorry about the rambling reply. I am told that us old geezers tend to do that. Thanks again for your thoughts and please look for me on the air (80 meter CW mostly). After all,

I think that is what it is all about. Keep the filiments glowing!

Subject: [AWA] Would appreciate some advice

Hi Guys,

I recently built a replica of a 1929 TNT transmitter from the November 1929 Issue of QST, to participate in the next Bruce Kelly 1929 QSO party. It uses a type 45 tube and puts out about 3 watts. I looked at the output on a spectrum analyzer and the signal has no spurs and all harmonics are at least 50 dB below the fundamental (80 meters). I asked several close friends around the State to listen and critique the signal. They all reported chirp, but no clicks, with a T-9 tone. I have made about 20 contacts with the rig and the reports have been consistant with "some chirp". Of course the chirp is worse on a windy day, but no one has complained, and many guys said the signal was "unique. I monitor the signal with a frequency counter and another receiver, and have had 45 minute QSOs with no apparent frequency drift. To be honest, I do not think I have ever had so much fun with Ham Radio. I can imagine myself in the early days of radio, when no one had
commercial gear, and all the signals probably had some chirp.

I planned to build a display for the rig at our local Ham Swap in February, to show folks what equipment was like in the early days of radio. I also wanted to collect a few QSL cards to display with the rig, to prove it actually works. Thus, I have been on the air with the rig most evenings.

Dave,

As was explained to me some years ago after getting OO fan mail:
These AWA cw contests are HISTORICAL EVENTS. (not shouting, just emphisis hi) These old transmitters were standard engineering practice in 1929. I wonder how many hams have gotten a pink slip from the FCC for mild chirp? Oops, as someone once said, "leave us not ask too many questions, or we will get an answer we don't like"

Hi Ron

Where you been? Haven't heard from you in weeks. Have you been in jail or something?

I think it is downright disgusting how a couple of geezers, who are too really too old for any serious sinning, can get in so much trouble. What's this world coming to? We should both be put away.

Seriously, its great to hear from you. Been looking for you on 80 meters, but no contact. I miss your loud signal and great fist. Please get back on air and talk to me. You are one of the few friends I have willing to send slow enough so I can copy.

As you know, I have retired the TNT for a few days so you will not be able to find me by the chirp. Am running high power now (5 watts) so listen for a bodacious (is that a word?) signal around 3550 to 3560 most evenings after 0100 Z.

Hi Mr. Dave!
You are correct! I have not been on 80 mtrs lately. Been busy repairing an old Zenith radio for a friend of Nancy's. Had to re-string the dial cord, remove smoke stain from the freq. display, order a 120 VAC, 10 watt dial light, replace most of the tubes, replace electrolytic capacitors, and trouble-shoot a audio distortion problem using my scope and signal generator. Then, had to wash the case, clean the chassis and polish the case. It is now almost complete!! So, I will be back on 80 meters soon!! I have been on 10 meter CW lately. The band is like it was 30 years ago!! Wide open.

See you on the band, soon. Ron, WA9QNN   Rambo-san, I was in jail or something!! He-He!

I will use one of those while I rebuild the power supply for the TNT, and try some different values for the Grid Leak resistor. Probably a good time to finish winding the 40 meter coils as well. I recently acquired a NOS type 10 tube, so maybe I will modify the rig to use it. The increased power from the type 10 will allow me to reduce the coupling and maybe the reduced loading will improve the signal. So many interesting things to try!

Probably the best solution would be to build a MOPA type circuit and let the oscillator run, keying just the PA. I have talked to a few guys doing that and their signals sound very good. Guess it is time to see what circuits are available. At any rate, I will have something vintage on the air for the BK QSO party in December.

Sorry about the rambling reply. I am told that us old geezers tend to do that. Thanks again for your thoughts and please look for me on the air (80 meter CW mostly). After all, I think that is what it is all about. Keep the filiments glowing!

Subject: [AWA] Would appreciate some advice

Hi Guys,

I recently built a replica of a 1929 TNT transmitter from the November 1929 Issue of QST, to participate in the next Bruce Kelly 1929 QSO party. It uses a type 45 tube and puts out about 3 watts. I looked at the output on a spectrum analyzer and the signal has no spurs and all harmonics are at least 50 dB below the fundamental (80 meters). I asked several close friends around the State to listen and critique the signal. They all reported chirp,

but no clicks, with a T-9 tone. I have made about 20 contacts with the rig and the reports have been consistant with "some chirp". Of course the chirp is worse on a windy day, but no one has complained, and many guys said the signal was "unique. I monitor the signal with a frequency counter and another receiver, and have had 45 minute QSOs with no apparent frequency drift. To be honest, I do not think I have ever had so much fun with Ham Radio. I can imagine myself in the early days of radio, when no one had
commercial gear, and all the signals probably had some chirp.

I planned to build a display for the rig at our local Ham Swap in February, to show folks what equipment was like in the early days of radio. I also wanted to collect a few QSL cards to display with the rig, to prove it actually works. Thus, I have been on the air with the rig most evenings.

Yesterday I received a notice from an "Official Observer" that my signal has "Frequency Instability", 'Chirps", 'Key Clicks", and "Distorted Audio", and stated that "Your rig is not in compliance with FCC mandates". He listed 47 CFR 97 101, 103, and 113 as his reference. I researched those paragraphs in the regulations. They mostly say we cannot use profanity, transmitt music, deliberatly interfer with others,accept compensation, etc. There is one general statement about using good operating practices. I Emailed the gentleman requesting more specifics, and that he tell me just how I am violating the law. He has not responded.

My question is this. Do you guys think that I am truly in violation of FCC rules? I have always tried hard to follow the rules and do not consider myself a "hardened criminal". I certainly do not want to get in trouble with the Friendly Communications Commission, but am having trouble understanding who I may be harming here. Am I having too much fun? Should I just chuck the rig and go back to a Ricebox? Maybe a better regulated power supply would help.

Would appreciate your input. My skin is pretty thick so if you think I am wrong, please tell me . Am reluctant to put the rig back on the air at this time.

73, Dave

11497. RE: [AWA] AWA Journal

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-11-22 17:04:18 UTC
From: Joseph W. Koester
Topic: 5403 Message: 11497

I don't want to stoke any fires but I do wish to comment.

I did not like the AWA combining the museum and the organization. I felt they should remain separate and distinct. I use the example of the Mid-Atlantic Antique Radio Club in the DC area and the Radio History Society. When they started the RHS and established a museum in Bowie, MD they examined it and felt they should be separate. I don't recall all the reasons, but it works very well.

Now for a long time the AWA organization and the Museum were separate and it appeared, from the outside, that it worked very well. The museum was highly valued and respected and the AWA organization was alive, well and vibrant. When the Antique Radio Club of America (ARCA) was dying it made sense to merge it into AWA.

Maybe the AWA organization was starting to die like ARCA, maybe not, I hope not. But the meets were mere shadows of their former self and we were all disappointed. It may just be the way the hobby and the economy and the way the internet has affected collecting. For whatever reason the AWA meets were significantly smaller, especially where us flea market rats were concerned. I went twice in recent years and felt there were better meets as far as the flea market was concerned - Charlotte, Maryland, Kutztown and Michigan were all better attended or had more in the flea market.

So maybe the AWA leadership was forced to combine. Surely they want the flea market and the convention to succeed. They said they could not get enough directors to fill both organizations. Maybe they feel the museum is more important thnt the convention - I sure hope not. But they are all closer to the AWA convention and the Museum and surely they did what they felt was best.

So now we all individually have to decide whether we benefit from belonging to the AWA. You can either continue to be a member and be happy to be one or you can cease to be a member if the organization does not "scratch your itch" or satisfy you.

Quite frankly I don't think that the Charlotte group needs to be a "Chapter" of the AWA. The chapter concept was viable and perhaps worthwhile at one point in time and it might have been advantageous for Indi dual clubs to get under that umbrella. Particularly smaller clubs that might have been struggling. The Charlotte group is highly successful insofar as putting on a great regional meet in March of every year, and they have other smaller meets that seem to satisfy their members quite well. I believe that they will function and flourish on their own and can separate from the AWA if they want to. What real benefits do they derive?

Maybe if AWA was interesting in fostering clubs and bringing them in under one national group they could figure out a way that would be advantageous to all.

In any event, when AWA made major changes that I didn't agree with and when the meets (convention) were so poor I felt it was not worth me belonging to. So rather that bitch and moan and continue to take pot shots at the AWA as I did, I just folded my tents. I am going to do the same with the ARRL - I don't read QST and I don't get much from it although maybe I should continue simply to support their efforts for HAM radio. I believe that everyone should join MAARC, not to be a member, but to get RADIO AGE.

So to paraphrase the old adage of "Lead, follow or get out of the way," "Join, derive pleasure and benefit, or drop out."

BTW, I wish AWA and their Museum well, but will attend other meets and belong to those organizations that I feel benefit me.

More than enough from me.

Regards to all.

Joe, W4NSA

11499. Radio Book Collector Software

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-11-26 15:14:49 UTC
From: oldradio@comcast.net
Topic: 11499 Message: 11499

Sherry decided we needed a new floor in the living room, a wooden one.

I figured that because I had to put them all back after our new floor was completed, I may as well inventory the collection. I first thought about using a spread sheet.

I found a great and reasonably inexpensive, program for tracking my book library. I looked on-line and found this one for $25 after a $5 discount. They provide a sample database to play with, and you can start your own database for up to 100 books for free. Then you need to buy it. After about 10 books I was convinced and bought it. They provide a key and when added opens up the program for multiple databases for any amount of books. It prints reports, will make a web page and has many other nice features.

Here is the Collectorz.com web site:
http://www.collectorz.com/ Click on Book Collector.

I found the automatic entry fantastic. By entering the ISBN or LOC numbers, it fills the fields with the proper data. Also for older books like we have, by entering (partial) Author and (partial) Title, it will find the information on line and fill it in for you. It even finds book covers for you. And you can track your book loans, if you loan books out.

The program is well behaved on my Win7 computer. This was the best $25 I've spent lately.

I have no connection with the company.

11500. Bruce Kelly 1929 QSO Party

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-11-26 15:28:16 UTC
From: whitebear1122@comcast.net
Topic: 11499 Message: 11500

Hi guys, Just a reminder that the rules and logsheets are up on the AWA website at: http://www.antiquewireless.org/hamevents2010.htm

Inspite of the 2010 numbers in the link, it's for the 2011 events.

This morning I'm mailing off about 60 reminder/rules/logsheets to hams that I don't think are on either the AWAGROUP or Rons Antique Wireless Association reflector. Contest Manager Tim Walker W1GIG suggested that we don't need to do this anymore since most everything is on the internet. He's right so this will probably be the last year of the large mailing but I do know of several hams who don't do computers or internet so I may continue mailing to them. I did not mail logs to you foks that post on the reflector because I know you are aware of the event and have access to the log sheets.

I usually get the mailings out in early November but things have been busy. The shack was completely packed away as we remodeled the walkout basement including shack. The remodeling is nearly complete and I have a desk placed in the shack where I'll be wiring up the 29 station this weekend. Last month my wife was in a serious car accident after being rear ended by a fast moving semi while she was stopped on the freeway in traffic. She's safe and getting over cracked ribs. Car was totaled when the trunk ended up in the back seat and they had to cut her out of the car. And then work has been super busy this Fall and if you can believe the irony, another large layoff has been announced for the week of December 12, so that is gnawing on me lately. Maybe I should become a wealthy retired gentleman like Eddy and Lou, and not have to worry about this layoff stuff :)

I've found the packed away 29 Colpitts and power supply and plan to wire it this weekend. I'm looking forward to hearing and hopefully working all you guys next weekend!

11506. Fwd: [Radiomarine] K6KPH and KSM on for New Year's Eve

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-11-30 04:33:42 UTC
From: Duncan Brown
Topic: 11506 Message: 11506

To all CW ops from the Maritime Radio Historical Society:

We've received several inquiries asking if we will be participating in Straight Key Night (SKN) this New Year's Eve as we have in the past, and if guest operators are invited. I'm happy to report that the answer to both questions is Yes!

SKN is an annual amateur radio event - not really a contest in the usual meaning of the term - in which operators use mechanical keys to make relaxed Morse code contacts with other stations on New Year's Eve (don't let anyone tell you that radio ops don't know how to party!). K6KPH will be on the air with multiple operators beginning 0000Z 1 January 2012 (late afternoon or evening 31 December in US time zones). Since 31 December is a Saturday we'll be on the air as normal, then transition to SKN operations. Frequencies will be 3550, 7050, 14050 and 21050. For details on SKN see the ARRL Web site at http://www.arrl.org .

We'll also keep KSM on the air late into the night to give listeners (and ships!) a chance to hear us at times beyond our normal shut down. In addition to the wheel we'll broadcast press and weather so that 426kc will be active in addition to our HF channels (see http://www.radiomarine.org for frequency details).

Guest operators are welcome. Bring your key and 'phones or use ours. No license is required for amateur operations but if you have a commercial radiotelegraph ticket bring it along. You can sit the circuit at KSM and have your license endorsed to that effect. If you plan to come please let me know so I can get a head count and so I can provide directions to the receive site if needed.

VY 73,

RD

Hi Steve

I have wound the 40 meter coils for my TNT and for my regen receiver but have not tried either piece of equipment on the air yet. As this will be my first BK event, I think I will try 80 meters the first weekend and try 40 meters the second weekend. I am in upper Michigan so will be a long haul for us on 80, but should be workable on 40.

Would love to talk to you during the BK, or any other time for that matter. Anticipating a few contacts and a lot of fun this weekend and hope we can hook up.

Mister Chirps (my TNT transmitter) and I have our game faces on, and are "ready to rock and roll"!

Hi Alan,

I think that most of us don't care for the music venue available on AM radio today, at least not for relaxed listening of our favorites. (music)

I plan to put a MP-3/Ipod jack on a nice Atwater Kent Tombstone I will give as a gift to a valued friend. After he listens to his talk shows on AM, he'll be able to listen to his choices of music.

My favorites are (and not necessarily in this order)....

Real Cowboy/Western music: http://rangeradio.com/
Big Broadcast - Old bands: http://www.wfuv.org/search/node/big%20broadcast
Jim Baldwin, known as DJ "jimmiejazz", hosts the "jimmiejazz" show:
http://www.jimmiejazzarchive.com/

I have CD's recorded in MP3 of each show above, several CD's from various dates for use when I'm driving.

I keep http://rangeradio.com/ on almost all the time here at the computer. It's great background while working.

Hi Alan,

I think that most of us don't care for the music venue available on AM radio today, at least not for relaxed listening of our favorites. (music)

I plan to put a MP-3/Ipod jack on a nice Atwater Kent Tombstone I will give as a gift to a valued friend. After he listens to his talk shows on AM, he'll be able to listen to his choices of music.

My favorites are (and not necessarily in this order)....

Real Cowboy/Western music: http://rangeradio.com/
Big Broadcast - Old bands:
http://www.wfuv.org/search/node/big%20broadcast
Jim Baldwin, known as DJ "jimmiejazz", hosts the "jimmiejazz" show:
http://www.jimmiejazzarchive.com/

I have CD's recorded in MP3 of each show above, several CD's from various dates for use when I'm driving.

I keep http://rangeradio.com/ on almost all the time here at the computer. It's great background while working.

Check the link below. Interesting, I guess, but it is too bad that these wonderful treasurers are being reengineered (destroyed) for an iPod sale!

True, and watch the prices for these old classics at flea markets go sky high, just like what happened with tubes! The one thing they don't tell you, and I'm sure they would if it was true, is that these are probably still monaural sets!

Here is their website: _http://3ryan.com/3ryan/3ryan_Radios.html_ (http://3ryan.com/3ryan/3ryan_Radios.html)

Yeah, it is a shame. Don't these people realize it's a radio? Connect the ipod to a transmiter, don't drill a hole in the cabinet! I've been looking for a nice Philco signal tracer for quite a while and discovered they are being "modified" for use as speakers/ guitar amps. One particular modification was the removal of all circuitry!

Hi Steve

Installed the 40 meter coils in the TNT. Rig seems to be pretty unstable on 40 but will decrease the loading and give it a try. Will try to be on or around your frequency at 2300 Z tomorrow. Will try a few minutes before moving to 80. The old TNT chirps a bit on 80 but seems to get out. Do not know how she will work on 40. Guess I will find out tomorrow.

Hope to hook up tomorrow night.

Have a look at the Yar True-Tone speaker in the July 2011 edition of the WARCI News.

See http://www.warci.org/WARCI%20Newsletters/jul11.pdf

It goes 40 inches. The example in the article belongs to Buford Chidester, who kindly allowed me to use his photos.

Best,

Greg Hunolt

11526. Comments Following End of First Weekend of Kelly 1929 QSO Party

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-12-05 04:04:37 UTC
From: whitebear1122@comcast.net
Topic: 11526 Message: 11526

I hope everyone had a fabulous time operating in the first weekend of the Bruce Kelly 1929 QSO Party, I sure did!!

I heard there was a group of 29'ers operating 40m at the start of the QSO Party. I was having trouble with 40m so I started out on 80m. I heard alot of guys and worked a bunch. The East Coast guys were a tough copy for me although I did manage to work several. The 'furthest east guy' Larry NE1S from Maine was heard here in MN but I just wasn't able to pull him out of the noise. Larry, you were S minus 5. hi hi I did make a non point QSO by contacting our buddy Ed Gable at the headquarters W2AN station.

I was pleased to work several West Coasters including Steve VE7SL in British Columbia, and KK7UV in Montana, and Jim W8KGI in New Mexico. I didn't hear any other West Coasters so I know there are a couple of missing that I look forward to working like K5RB and our California friends.

Canada was heard and worked including Lou VA3AWA and Steve VE7SL. I didn't hear my buddy Eddy VE3CUI/VX3XZ. Eddy, you gotta dump that 160m contest stuff and kick the company out of the house so you can get on the 1929 QSO Party. hi hi Next year were adding 160m to the event just so we can work you in the 160m contest. hi hi

Several big guns missing like N9HAL, N9OO (recuperating from the FLU), and WA3FFC (recuperating from an injured wrist).

I heard and worked a couple of new stations like WA8DOP from Michigan and W9TFC from WI. It's always particularly fun to work new stations.

40m worked out fine as far as I could tell. 40m was open this morning after 80m petered out. I worked a whole lot more 40m stations this year now that we're up in the 7105 to 7115 portion of the band. Kudo's to you guys for coming up with this idea. It was sweet getting away from all that digita, nets,l and high power clutter down on 7040.

Signal quality was probably as good as I've ever heard, maybe a little too good. I didn't hear any downright crappy sounding signals at all. I can think of the worst sounding signal I heard and I ain't naming names, and still it wasn't that bad. hi hi

It was hard to even find some good "chowpee chowpit" sounding signals. I always smile when I hear those. Eddy, you got to get the 'yodeller' on the air year. And those of you that worked me on 40m, sorry for my drifting up in frequency 1 Kc during the QSO. My 28 Colpitts push-pull pair of 210's continually drifted on 40m. I'm not sure that push-pull arrangement is all that great. I think the push-pull circuit is more squirrelly than a single tuber so I'[d like to show up next year with a single tuber Colpitts.

I'll be on next Saturday night ready to work all you guys that I missed this weekend.

Thanks for a great time. 73, Scott WA9WFA in Saint Paul MN

From: N1BUG
Topic: 11527 Message: 11527

WANTED, will pay cash or trade if I have anything you need:

Cardwell type B variable condenser, .001 (43 plate), .0015, or .0017 (71 plate), must have black HR insulators

1920s transmitting filter condensers, 1 uf or more, 800V & up, defunct is OK if they can be re-stuffed and externally refurbished

Also looking for lower voltage filter condensers for an rx B eliminator, same deal regarding condition

Thordarson R-196 choke

Jewell pattern 54 panel meter with 1000 volt DC scale

2 matched UX4 tube sockets, NOT springy type, for '81s in a power supply. I like square ones with top posts but I'll settle for something else, probably...

Sangamo .0005 (500 pf) mica condenser, the flat-sided oval type. I could also use a set or two of G/L clips for Sangamo mica condensers if anybody's got a surplus of 'em.

Pilot midget variable condenser with as few plates as possible.

Pictures & more available at my web site. I've had problems posting links in some groups but it is n1bug dot com & there's a big Parts Wanted link at the bottom.

Anyone?

TNX & 73,
Paul

One thing on my project list for this winter is to construct a small AM broadcaster that will accept audio from the 'pooter sound card and rebroadcast it within the house on 1000 KHz. That way I can play sound files, CD's, internet radio, whatever to any old AM set in any room of the house - and there is at least one such set in each room!

I'm going to use the chassis, cabinet, and some parts from a junker catalin AA5 (actually a AA6, I think. And I'm just kidding about the catalin part - did I get your attention? ;-)). I'm thinking a 25L6 PA with series class-A modulation in the negative lead provided by 3 paralleled 25L6s. A 6SJ7 pierce XTAL oscillator will drive the RF PA - I have a nice, big, robust XTAL for 1000 KHz I picked up at the fall NEARFEST. The strongest close-by local signals are WZAN in Portland on 970, and WBZ in Boston on 1030, so that puts me half-ways in-between. Two more 6-volt tubes (6C5, 6J5?) will provide low-level audio amplification, and that way the series string will add up to 118V. May have to use some miniature tubes instead if I run out of space. I plan on using a solid-state full-wave voltage doubler in the power supply. I'm going to try to use the loop antenna for the RF plate tank coil and

antenna; we'll see.

73,
-Larry/NE1S

Anyone know anything about a Morsetyper Mod IV?? (looks German?)
If you know anything about it, please respond here (not just to the
originator) - I'm curious!

Have fun,

Duncan

Hi:

Picked this up on eBay, but neither the seller or myself knows what it is. Do you?
http://www.prc68.com/I/MorseDecoding.shtml

Not sure if it's for decoding or more likely for sending Morse and printing a paper tape in the process.

11532. WTB: 816 Mercury Rectifiers

Yahoo group: antiquewirelessassociation (2010 — 2015)
Date: 2011-12-09 14:10:03 UTC
From: whitebear1122@comcast.net
Topic: 11531 Message: 11532

Hi, I'm want to get some 816 mercury rectifiers for a high voltage supply for my 1920's/1930's ham transmitters. I originally put in a type 80 full wave rectifier but it's boring. I like the glow of the mercury rectifiers. True, 866's will glow but I don't need that much current capacity and they consume more filament current than my whole transmitter (and receiver and half the shack) consumes.

So I"m looking for some 816's and some ceramic plate caps for them. Appreciate any help. Thanks. 73, Scott WA9WFA in Saint Paul MN

Well ...another delightful QSO Party completed and it was just as much fun as my first, three years ago. Unlike the last two however, when band conditions were superb, weekend #1 was terrible out west. Things perked-up significantly for weekend #2 when I was able to work many of the stations missed on the previous Saturday. My total QSO count this year is the same as last year, with 44, which included one none-vintage contact. As usual, 80m was the most productive band, producing almost all of my east coast contacts.

My best DX was (again) stalwart NE1S at 2496 miles, followed closely by his neighbor, K1TMJ at 2486 miles. Other notable long-haul contacts were with KC1FB (2449 miles and his 5 watts on 80m!), WU2D (2476 miles) and K1VVC, K4JYS, N4GJV, W2LB, all in excess of 2200 miles.

Thankfully, the wind was not a big factor here this year and my signal remained reasonably stable for the most part. Like a few others, I too envision a MOPA for next year, if only to save me from worrying about the weather. This year I ran the Hull Hartley on both 80 and 40, using the 80m coil on 40m as well, which seems to work just fine. The antenna is the same one used for the past three affairs, full-size quarter wave wire groundplanes suspended from the top of a 70' Balsam at about a 70 degree angle. The base of the antennas are about 20' from the ocean, towards the east, which certainly helps a lot.

A nice QSO was had with Steve KK7UV, on Topband, in mid-Party last night, and although his signal was very loud, no others from the east were heard even though there were a few 29'ers looking west. Conditions on Topband were not good and a quick tune through the normal CW band turned up zero signals...most unusual for a Saturday night and indicative of the poor propagation on 160. Next year, with 160m added to the B-K, hopefully there will be a lot more interest and activity, as transcontinental QSO's are readily possible when conditions cooperate. This year's shakedwon on Topband indicated that I could make the change from 80-160 in 6 minutes...faster than I had envsioned!

I got on 80m early this morning (0400 local) to catch the east coast sunrise enhancement. Loud signals were heard from WA3YNW in Maryland, who was tied-up with a none-contester, scolding him about his unstable signal. By the time he had explained and extricated himself, he was too weak to work. Similarly, a strong signal was heard from W1GIG but his QSO with a midwest station required several repeats and by the time they had completed, Tim's signal had deteriorated. His following weaker CQ's continued in spite of the several mid-western stations and myself calling.

Some other gleanings from my log indicate that 38% of my QSO count came from Minnesota. What an amazing hot-bed of '29 activity this state remains. Has

anyone figured out why and how it can be spread? And where are all the western stations?....no California! and just one from monster size Texas...come-on guys!!

The 40m QSY proved to be very beneficial here, with 17 QSO's on that band compared with my previous best (and hard-won amongst the digital mess) of 8 contacts. Although I noted a few 'CQ WES', none of the stations heard were anywhere near as bothersome as the S9 digital blasts in the old 40m window. And speaking of 'windows', of my 27 contacts on 80m, the average frequency turned out to be 3564, with activity heard as high as 3572 and as low as 3555.

Worked for the first time ever were the vintage stations of WA8DOF, WB2AWQ (Nevada), NI8G, K5RB (Texas), K1VVC (SC) and KI0DB (MN). Notably absent or just missed, were WA3FFC, N9OB, WA9QNN, WA1JAS and KB7NRN.

Unlike previous years, when the propagation was dominated by an east-west path for most of the night, I only heard VE3AWA and VX3XZ very briefly and not with their usual ether-busting signals. It seems that the skip may have been a bit longer and a little south of the normal one.

Thanks for all of the fun and all of the great operating skills demonstrated. I'm always amazed at how many very weak signals respond to my information with a 'QSL rr' the first time. I had only one station ask for a repeat.

I can hardly wait until next year to do it all over again!!

Steve / 73

What a coincidence! My total was also 44 - but I'm not counting two guys
that called me who weren't participating in the BK. If you were closer to
most of the activity (in the east), I'm sure you could have well exceeded
44.

> My best DX was (again) stalwart NE1S at 2496 miles,

Another coincidence! MY best DX was VE7SL at 2496 miles!

I must've missed KC1FB, drat!

Sorry - I was pretty tired and the CW started all running together in my
head around 0200Z, so I hung it up for the night and didn't get on 160
with you guys.

WA1JAS was on today; worked him on both bands.

Er - I think that was me!

> I can hardly wait until next year to do it all over again!!

I often run my 29 rigs in the January contest (is it still the Linc
Cundall? or is it now called the Rollins? I'm confused).

11540. BK 1929 QSO Party Observations - WA9WFA

Topic: 11538 Message: 11540

Wow wow wow, what a great time! My thanks to all who participated in this 26th or 27th 1929 QSO Party.

It was great seeing all my old 1929 friends again. It was fun working the usual gang, meeting some new recent additions to the BK, and finally working some of those stations that I haven't worked in years or ever heard. There are still a bunch of New England stations that I still haven't worked yet. I worked several stations that I haven't heard in years like KC1FB, K1TMJ, WA1JOS, WA3YNW.

I was happy to hear AA9DH from Illinois back this year. He didn't participate last year.

I have been processing the logs for maybe 6 or 7 years now and I always come across a bunch of stations that I haven't had the pleasure of working yet.

Plus I heard another 8 or 9 stations that I just couldn't pick up. I heard and called Tim W1GIG after he finished with another station but the band changed and I never heard him again.

80m was fabulous both Saturday nights. At my QTH, conditions were good, band noise low, and now line noise. Probably the best 80m conditions in several years.

40m was fabulous the first weekend. 2nd weekend Sunday morning it was fair, dead till later afternoon. Moving from the garbage pit of 7040 to 7110 worked out really well! There was just a tiny bit of ssb, one AM broadcaster on 7105 at times, and a couple of digital stations around 7105. Compared to 7040 with all it's digital racket, RTTY contesters, high power cw, and SSB, was a vacation! Clearly there was more 40m activity this year than any other year in my opinion. I worked around 19 stations on 40m.

I used my push pull 2x210 Colpitts on both 80m and 40m with a pretty good signal. If you remember contacting me, let me know what the Colpitts sounded like at your station. I heard alot of good sounding stations on 80m and heard more chirpers and chowpee chowpit stations on 40m. I heard a couple of stations that were difficult to copy because their frequency was moving around quite a bit. I heard one raw ac station. I heard one station, and I'm not telling, whose signal was so nasty that I could barely understand the report because the frequency would abruptly and randomly shift from a few hundred cycles to 1 KC or more, in the middle of a dit or dah, doing this wildly. I heard a few of my favorite wind modulated signals.

From my rough numbers I worked 57 authentic 29 stations, about 19 on 40m and 38 on 80m. The only non- 29 station worked was W2AN and I called him because I wanted to hook up with Ed at the AWA headquarters stations. You know, I never liked the rule change where 'the occasional' modern station counted, and I think we should change it back to the old rules, 29 to 29 contacts only counting. Last year a couple of stations were including up to 10 modern contacts in their score. To me this seems to be more than the "occasional" contact that the rule change envisioned, and it skews the scores. I haven't heard of any modern stations contacting a 29'er and then signing up to join the AWA. I think it's a distraction.

Next year 160m will add a new dynamic to the QSO party. The seasoned 160'ers like Eddy and Steve will feel right at home while us newcomers to 160m will be dipping our toe on the water. Gads, that's going to be one big coil if I use the Colpitts.

I was pleased to work some westcoasters in the form of VE7SL, KK7UV, and W8KGI in NM. Don't know why the west coast isn't more active. I've been told by some past westcoast operators that they don't hear anything from the midwest or east coast. I know Steve VE7SL is hearing everyone, and I tell you KK7UV was heard here on 80m and 40m alot of the time. I'll bet VE7SL and KK7UV worked a ton of stations.

Steve asked whats going on in MN. There is a very strong MN group consisting of around 12-14 stations. Much of the reason is due to Harold KB0ROB who uses his 29 equipment all year around. He is telling everyone about it too. He put together a packet of information on how to build a receiver and transmitter, sends it free to people he contacts on cw and ssb. He's shipped parts and tubes for free to newcomers. There is a loose group in MN called the "Mighty Midwest Glowworm Society" and we discuss 29 transmitters and receivers all year around.

That's it from here. Thanks again to all the folks who dig deep into the noise and pulled these 1929 peanut whistles out of the noise.

Hi Dave (and all) It was great working you on both 40m and 80m!! I imagine with you in the middle between the Midwest guys and the east coast guys, you can hear everyone. I'll be curious what your score is but I imagine it's a large number. My first year I had something like 14 contacts and I was so proud of that accomplishment. Congrats on your first BK 1929 QSO Party!!

Subject: [AWA] Time to say Thank You

Hi Gang

Just finished my first AWA BK. A lot of you guys scored more points than I did but no one had more fun!

Just wanted to say thank you to all the folks that participated and especially to those that made it happen. Events like this do not just happen. Someone has to do a lot of work and organizing. I do not know who all to thank except Scott, WA9WFA, so please forgive me if I missed someone.

Was a great event! By the way, would be interested to know if anyone received any OO fan mail.

Am already working on a type 45/210 MOPA for next year.

73

Dave, WA8DOF
